

# Count on it.

# TimeCutter® Z4235 Riding Mower

Model No. 74365—Serial No. 310000001 and Up

Model No. 74366—Serial No. 310000001 and Up

Model No. 74376—Serial No. 310000001 and Up

This machine is a ride-on, rotary-blade lawnmower intended to be used by homeowners in residential applications. It is primarily designed for cutting grass on well-maintained lawns. It is not designed for cutting brush, mowing grass and other growth alongside highways, or for agricultural uses.

This product complies with all relevant European directives, for details please see the separate product specific Declaration of Conformity (DOC) sheet.

#### **WARNING**

#### CALIFORNIA Proposition 65 Warning

The engine exhaust from this product contains chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm.

**Important:** This engine is not equipped with a spark arrester muffler. It is a violation of California Public Resource Code Section 4442 to use or operate the engine on any forest-covered, brush-covered, or grass-covered land. Other states or federal areas may have similar laws.

This spark ignition system complies with Canadian ICES-002.

The enclosed Engine Owner's Manual is supplied for information regarding the US Environmental Protection Agency (EPA) and the California Emission Control Regulation of emission systems, maintenance, and warranty. Replacements may be ordered through the engine manufacturer.

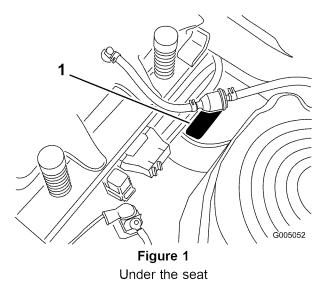

For models with stated engine horsepower, the gross horsepower of the engine was laboratory rated by the engine manufacturer in accordance with SAE J1940. As configured to meet safety, emission, and operating requirements, the actual engine horsepower on this class of lawn mower will be significantly lower.

# Introduction

Read this information carefully to learn how to operate and maintain your product properly and to avoid injury and product damage. You are responsible for operating the product properly and safely.

You may contact Toro directly at www.Toro.com for product and accessory information, help finding a dealer, or to register your product.

Whenever you need service, genuine Toro parts, or additional information, contact an Authorized Service Dealer or Toro Customer Service and have the model and serial numbers of your product ready. Figure 1 identifies the location of the model and serial numbers on the product. Write the numbers in the space provided.

1. Model and serial number plate

Write the product model and serial numbers in the space below:

Model No.
Serial No.

This manual identifies potential hazards and has safety messages identified by the safety alert symbol (Figure 2), which signals a hazard that may cause serious injury or death if you do not follow the recommended precautions.

1. Safety alert symbol.

This manual uses two other words to highlight information. **Important** calls attention to special mechanical information and **Note** emphasizes general information worthy of special attention.

# Safety

This machine meets or exceeds the B71.1-2003 specifications of the American National Standards Institute, in effect at the time of production. However, improper use or maintenance by the operator or owner can result in injury. To reduce the potential for injury, comply with these safety instructions and always pay attention to the safety alert symbol, which means CAUTION, WARNING, or DANGER-"personal safety instruction." Failure to comply with the instruction may result in personal injury or death.

# **Safe Operating Practices**

The following instructions are from ANSI standard B71.1-2003.

This product is capable of amputating hands and feet and throwing objects. Always follow all safety instructions to avoid serious injury or death.

## **General Operation**

- Read, understand, and follow all instructions in the operator's manual and on the machine before starting.
- Do not place hands or feet near rotating parts or under the machine. Keep clear of the discharge opening at all times.
- Allow only responsible adults who are familiar with the instructions to operate the machine.
- Clear the area of objects such as rocks, toys, wire, etc., which could be picked up and thrown by the blade.
- Be sure the area is clear of other people before moving. Stop the machine if anyone enters the area.
- Never carry passengers.
- Do not mow in reverse unless absolutely necessary. Always look down and behind before and while backing up.
- Be aware of the mower discharge direction and do not point it at anyone. Avoid discharging material against a wall or obstruction. Material may ricochet back toward the operator. Stop the blade(s) when crossing gravel surfaces.
- Do not operate the machine without deflector, discharge cover or entire grass collection system in place and working.
- Be alert, slow down and use caution when making turns. Look behind and to the side before changing directions.

- Never leave a running machine unattended. Always turn off blades, set parking brake, stop engine, and remove key before dismounting.
- Turn off blades when not mowing. Stop the engine and wait for all parts to come to a complete stop before cleaning the machine, removing the grass catcher or unclogging the discharge chute.
- Operate the machine only in daylight or good artificial light.
- Do not operate the machine while under the influence of alcohol or drugs.
- Watch for traffic when operating near or crossing roadways.
- Use extra care when loading or unloading the machine into a trailer or truck.
- Always wear eye protection when operating the mower.
- Data indicates that operators, age 60 years and above, are involved in a large percentage of riding mower-related injuries. These operators should evaluate their ability to operate the riding mower safely enough to protect themselves and others from serious injury.
- Always follow the recommendations for wheel weights or counterweights.
- Lightning can cause severe injury or death. If lightning is seen or thunder is heard in the area, do not operate the machine; seek shelter.

# **Slope Operation**

Slopes are a major factor related to loss of control and tip-over accidents, which can result in severe injury or death. Operation on all slopes requires extra caution. If you cannot back up the slope or if you feel uneasy on it, do not mow it.

- Do not mow slopes greater than 15 degrees.
- Watch for ditches, holes, rocks, dips, and rises that change the operating angle, as rough terrain could overturn the machine.
- Choose a low ground speed so you will not have to stop while operating on a slope.
- Do not mow slopes when grass is wet. Slippery conditions reduce traction and could cause sliding and loss of control.
- Always keep the wheel motors engaged when going down slopes.
- Reduce speed and use extreme caution on slopes.
- Do not make sudden turns or rapid speed changes.

- Remove or mark obstacles such as rocks, tree limbs, etc. from the mowing area. Tall grass can hide obstacles.
- Avoid sudden starts when mowing uphill because the mower may tip backwards.
- Be aware that loss of traction may occur going downhill. Weight transfer to the front wheels may cause drive wheels to slip and cause loss of braking and steering.
- Always avoid sudden starting or stopping on a slope. If tires lose traction, disengage the blades and proceed slowly off the slope.
- Use extreme care with grass catchers or other attachments. These can change the stability of the machine and cause loss of control.
- Do not try to stabilize the machine by putting your foot on the ground.
- Do not mow near drop-offs, ditches, steep banks or water. Wheels dropping over edges can cause rollovers, which may result in serious injury, death or drowning.
- Use a walk behind mower and/or a hand trimmer near drop-offs, ditches, steep banks or water.

#### Children

Tragic accidents can occur if the operator is not alert to the presence of children. Children are often attracted to the machine and the mowing activity. Never assume that children will remain where you last saw them.

- Keep children out of the mowing area and under the watchful care of another responsible adult, not the operator.
- Be alert and turn the machine off if children enter the area.
- Before and while backing or changing direction, look behind, down, and side-to-side for small children.
- Never carry children, even with the blades off. They
  may fall off and be seriously injured or interfere with
  safe machine operation.
- Children who have been given rides in the past may suddenly appear in the mowing area for another ride and be run over or backed over by the mower.
- Never allow children to operate the machine.
- Use extra care when approaching blind corners, shrubs, trees, the end of a fence or other objects that may obscure vision.

## **Towing**

A hitch kit is available for this machine and can be obtained by contacting an Authorized Toro Dealer. Do not tow without first installing this manufacturer approved hitch. The following guidelines apply when towing with the approved hitch kit installed.

- Tow only with a machine that has a hitch designed for towing. Do not attach towed equipment except at the hitch point.
- Follow the manufacturer's recommendation for weight limits for towed equipment and towing on slopes.
- Never allow children or others in or on towed equipment.
- On slopes, the weight of the towed equipment may cause loss of traction and loss of control.
- Travel slowly and allow extra distance to stop.

#### **Service**

Safe Handling of Gasoline:

To avoid personal injury or property damage, use extra care when handling gasoline and other fuels. They are flammable and the vapors are explosive.

- Extinguish all cigarettes, cigars, pipes and other sources of ignition.
- Use only an approved container.
- Never remove the gas cap or add fuel when the engine is running. Allow the engine to cool before refueling.
- Never refuel the machine indoors.
- Never store the machine or fuel container inside where there is an open flame, such as near a water heater or furnace.
- Never fill containers inside a vehicle or on a truck or trailer with a plastic liner. Always place containers on the ground away from your vehicle before filling.
- Remove gas-powered equipment from the truck or trailer and refuel it on the ground. If this is not possible, then refuel such equipment with a portable container, rather than from a gasoline dispenser nozzle.
- Keep the nozzle in contact with the rim of the fuel tank or container opening at all times until the fueling is complete. Do not use a nozzle lock-open device.
- If fuel is spilled on clothing, change clothing immediately.
- Never overfill the fuel tank. Replace gas cap and tighten securely.

General Service:

- Never operate a machine inside a closed area. Engine exhaust contains carbon monoxide, which is an odorless, deadly poison that can kill you.
- Keep nuts and bolts tight, especially the blade attachment bolts. Keep equipment in good condition.
- Never tamper with safety devices. Check their proper operation regularly.
- Keep the machine free of grass, leaves, or other debris build-up. Clean up oil or fuel spillage fuel soaked debris. Allow the machine to cool before storing.
- Stop and inspect the equipment if you strike an object. Repair, if necessary, before restarting.
- Never make any adjustments or repairs with the engine running.
- Grass catcher components are subject to wear, damage and deterioration, which could expose moving parts or allow objects to be thrown.
   Frequently check components and replace with manufacturers' recommended parts, when necessary.
- Mower blades are sharp and can cut. Wrap the blade(s) or wear gloves, and use extra caution when servicing them.
- Check for proper brake operation frequently. Adjust and service as required.
- Maintain or replace safety and instruction decals as necessary.
- Use only genuine Toro replacement parts to ensure that original standards are maintained.

# **Toro Riding Mower Safety**

The following list contains safety information specific to Toro products or other safety information that you must know that is not included in the ANSI standards.

- Stop the engine, disconnect spark plug wire(s) and remove key before performing any service, repairs, maintenance or adjustments.
- Keep hands, feet, hair, and loose clothing away from attachment discharge area, underside of mower and any moving parts while engine is running.
- Do not touch equipment or attachment parts which may be hot from operation. Allow to cool before attempting to maintain, adjust or service.
- Battery acid is poisonous and can cause burns. Avoid contact with skin, eyes, and clothing. Protect your face, eyes, and clothing when working with a battery.

- Battery gases can explode. Keep cigarettes, sparks and flames away from battery.
- Use only Toro approved attachments. Warranty may be voided if used with unapproved attachments.
- If loading the machine onto a trailer or truck, use a single, full-width ramp only. The ramp angle should not exceed 15 degrees.

**Note:** Determine the left and right sides of the machine from the normal operating position.

# **Slope Indicator**

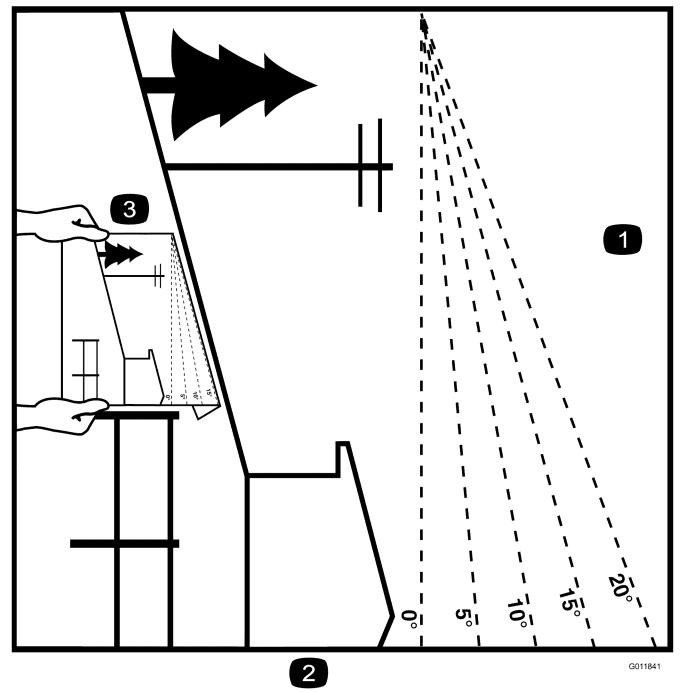

Figure 3

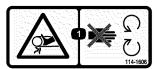

This page may be copied for personal use.

- 1. The maximum slope you can safely operate the machine on is **15 degrees**. Use the slope chart to determine the degree of slope of hills before operating. **Do not operate this machine on a slope greater than 15 degrees.** Fold along the appropriate line to match the recommended slope.
- 2. Align this edge with a vertical surface, a tree, building, fence pole, etc.
- 3. Example of how to compare slope with folded edge.

# Safety and Instructional Decals

Safety decals and instructions are easily visible to the operator and are located near any area of potential danger. Replace any decal that is damaged or lost.

114-1606

1. Entanglement hazard, belt—keep all guards in place.

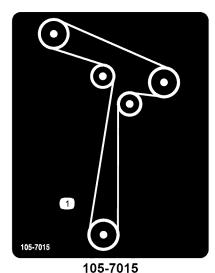

93-7009

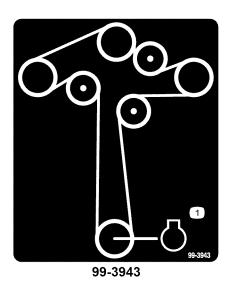

- Warning—don't operate the mower with the deflector up or removed; keep the deflector in place.
- Cutting/dismemberment hazard of hand or foot, mower blade—stay away from moving parts.

 Indicates the blade is identified as a part from the original machine manufacturer.

For Models with 42 Inch Decks

1. Engine

106-8717

- Read the instructions before servicing or performing maintenance.
- 2. Check tire pressure every 25 operating hours.
- 3. Grease every 25 operating hours.
- 4. Engine

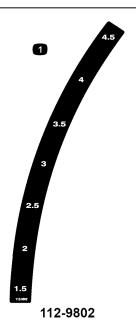

106-8743

1. Height of cut

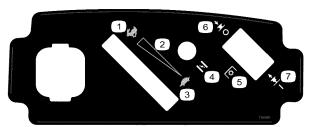

110-6691

- Thrown object hazard—keep bystanders a safe distance from the machine.
- Thrown object hazard, mower—do not operate without the deflector, discharge cover, or grass collection system in place.
- Cutting/dismemberment of hand or foot—stay away from moving parts.

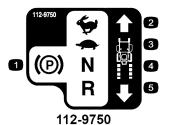

1. Height-of-cut

115-2501

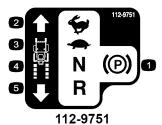

- 1. Fast
- Continuous variable setting
- 3. Slow
- 4. Choke

- 5. Power take-off (PTO), Blade control switch on some models
- 6. Blade control switch—Off
- 7. Blade control switch—On

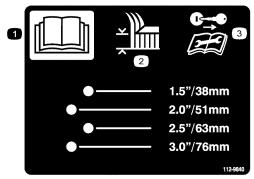

- 1. Parking position
- 2. Fast
- 3. Slow

- 4. Neutral
- 5. Reverse

- 1. Parking position
- 2. Fast
- 3. Slow

- 4. Neutral
- 5. Reverse

112-9840

- 1. Read the Operator's Manual.
- 2. Height of cut
- Remove the ignition key and read the instructions before servicing or performing maintenance.

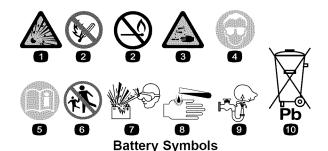

114-8531

- Bypass lever position for operating the machine
- Bypass lever position for pushing the machine

114-8532

- 1. Bypass lever position for operating the machine
- 2. Bypass lever position for pushing the machine

Some or all of these symbols are on your battery

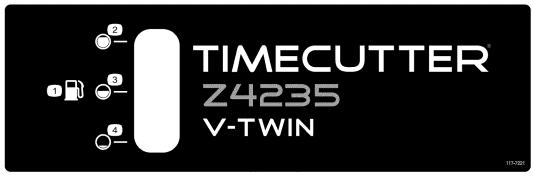

- Explosion hazard
- 2. No fire, open flame, or smoking.
- Caustic liquid/chemical burn hazard
- 4. Wear eye protection
- 5. Read the Operator's Manual.

- 6. Keep bystandersa safe distance from the battery.
- 7. Wear eye protection; explosive gases can cause blindness and other injuries
- 8. Battery acid can cause blindness or severe burns.
- Flush eyes immediately with water and get medical help fast.
- 10. Contains lead; do not discard.

115-2469

- 1. Warning—read the Operator's Manual.
- 2. Warning—read the instructions before servicing or performing maintenance; move the motion control levers to the park (brake) position, remove the ignition key and disconnect the spark plug wire.
- 3. Cutting/dismemberment hazard, mower blade; entanglement hazard, belt—do not open or remove safety shields while engine is
- 4. Tipping hazard—do not mow slopes greater than 15 degrees, avoid sudden and sharp turns while on slopes.
- 5. Loss of traction/control hazard, slopes—loss of traction/control on a slope, disengage the blade control switch (PTO), proceed off the slope slowly.
- 6. Crushing/dismemberment hazard of bystanders, reversing; crushing/dismemberment hazard of bystanders—do not carry passengers, look behind and down when reversing.
- 7. Thrown object hazard—keep bystanders a safe distance from the machine, pick up debris before operating, keep deflector in place.

117-7221

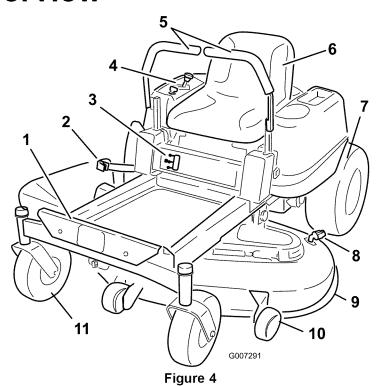

1. Fuel 2. Full 3. Half 4. Empty

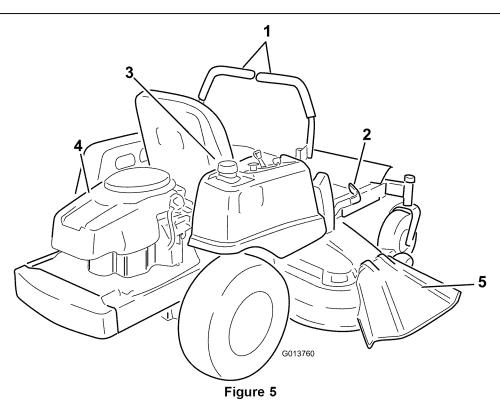

117-7222

1. Fuel2. Full3. Half4. Empty

# **Product Overview**

- 1. Footrest
- 2. Height of cut lever
- 3. Fuel gauge
- 4. Control panel
- 5. Motion control levers
- 6. Operator seat
- 7. Rear drive wheel
- 8. Washout fitting
- 9. Mower deck
- 10. Anti-scalp roller
- 11. Front caster wheel

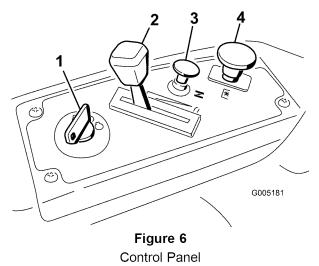

- 1. Motion control levers
- 2. Height of cut lever

- 3. Gas tank cap
- 4. Engine

5. Deflector

## **Controls**

Become familiar with all of the controls in Figure 4, Figure 5, and Figure 6 before you start the engine and operate the machine.

- 1. Ignition switch
- 2. Throttle control
- 3. Choke control
- 4. Blade control switch (power take-off)

# **Ignition Switch**

The ignition switch has three positions, Off, Run and Start. The key will turn to Start and move back to Run upon release. Turning the key to the Off position will stop the engine; however, always remove the key when leaving the machine to prevent someone from accidentally starting the engine (Figure 6).

## **Throttle Control**

The throttle controls the engine speed and it has a continuous variable setting from Slow to Fast (Figure 6).

## **Choke Control**

Pull up on the Choke control until it stops to choke the engine (Figure 6). Push down on the Choke control for normal engine operation

## **Throttle/Choke Control**

The throttle and choke is combined into one control lever. The throttle controls the engine speed and it has a continuous variable setting from Slow to Fast. Engage the choke by moving the lever past the Fast setting until it stops (Figure 6).

## **Blade Control Switch (Power Take-Off)**

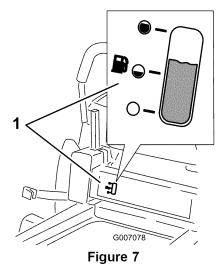

The blade control switch, represented by a power take-off (PTO) symbol, engages and disengages power to the mower blades (Figure 6).

# **Motion Control Levers and Park Position**

The motion control levers are speed sensitive controls of independent wheel motors. Moving a lever forward or backward turns the wheel on the same side forward or in reverse; wheel speed is proportional to the amount the lever is moved. Move the control levers outward from the center to the park position and exit the machine (Figure 16). Always position the motion control levers into the park position when you stop the machine or leave it unattended.

## **Fuel Gauge**

The fuel window located below the operator position can be used to verify the level of gasoline in the tank (Figure 7).

1. Fuel gauge window

# Height-of-Cut Lever

The height of cut lever allows the operator to lower and raise the deck from the seated position. When the lever is moved up, toward the operator the deck is raised from the ground and when moved down, away from the operator it is lowered toward the ground. Only adjust the height of cut while machine is not moving (Figure 19).

# **Operation**

**Note:** Determine the left and right sides of the machine from the normal operating position.

# Think Safety First

Please carefully read all of the safety instructions and decals in the safety section. Knowing this information could help you, your family, pets or bystanders avoid injury.

# **A** DANGER

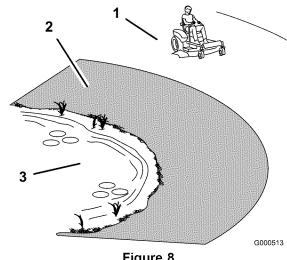

Mowing on wet grass or steep slopes can cause sliding and loss of control.

Wheels dropping over edges can cause rollovers, which may result in serious injury, death or drowning.

A loss of traction is a loss of steering control.

To avoid loss of control and possibility of rollover:

- Do not mow near drop-offs or near water.
- Do not mow slopes greater than 15 degrees.
- Reduce speed and use extreme caution on slopes.
- When mowing slopes, gradually work from lower to higher areas on the incline.
- Avoid sudden turns or rapid speed changes.
- Turn up, into an incline when changing directions on slopes. Turning down the slope reduces traction.
- Attachments change the handling characteristics of the machine. Use extra caution when using attachments with the machine.

- Figure 8
- Safe Zone-use the TimeCutter here
- Use walk behind mower and/or hand trimmer near drop-offs and water.
- Water

# **Recommended Gasoline**

Use UNLEADED Regular Gasoline suitable for automotive use (87 pump octane minimum). Leaded regular gasoline may be used if unleaded regular is not available.

**Important**: Never use methanol, gasoline containing methanol, or gasohol containing more than 10 percent ethanol because the fuel system could be damaged. Do not mix oil with gasoline.

## **A DANGER**

In certain conditions, gasoline is extremely flammable and highly explosive. A fire or explosion from gasoline can burn you and others and can damage property.

- Fill the fuel tank outdoors, in an open area, when the engine is cold. Wipe up any gasoline that spills.
- Never fill the fuel tank inside an enclosed trailer.
- Do not fill the fuel tank completely full. Add gasoline to the fuel tank until the body of the tank is full but fuel does not fill the neck of the tank. This empty space in the tank allows gasoline to expand.
- Never smoke when handling gasoline, and stay away from an open flame or where gasoline fumes may be ignited by a spark.
- Store gasoline in an approved container and keep it out of the reach of children. Never buy more than a 30-day supply of gasoline.
- Do not operate without entire exhaust system in place and in proper working condition.

## **A** DANGER

In certain conditions during fueling, static electricity can be released causing a spark which can ignite the gasoline vapors. A fire or explosion from gasoline can burn you and others and can damage property.

- Always place gasoline containers on the ground away from your vehicle before filling.
- Do not fill gasoline containers inside a vehicle or on a truck or trailer bed because interior carpets or plastic truck bed liners may insulate the container and slow the loss of any static charge.
- When practical, remove gas-powered equipment from the truck or trailer and refuel the equipment with its wheels on the ground.
- If this is not possible, then refuel such equipment on a truck or trailer from a portable container, rather than from a gasoline dispenser nozzle.
- If a gasoline dispenser nozzle must be used, keep the nozzle in contact with the rim of the fuel tank or container opening at all times until fueling is complete.

#### **A WARNING**

Gasoline is harmful or fatal if swallowed. Long-term exposure to vapors can cause serious injury and illness.

- Avoid prolonged breathing of vapors.
- Keep face away from nozzle and gas tank or conditioner opening.
- Keep gas away from eyes and skin.

## **Using Stabilizer/Conditioner**

Use a fuel stabilizer/conditioner in the machine to provide the following benefits:

- Keeps gasoline fresh during storage of 30 days or less. For longer storage it is recommended that the fuel tank be drained.
- Cleans the engine while it runs.
- Eliminates gum-like varnish buildup in the fuel system, which causes hard starting.

Add the correct amount of gas stabilizer/conditioner to the gas.

**Note:** A fuel stabilizer/conditioner is most effective when mixed with fresh gasoline. To minimize the chance of varnish deposits in the fuel system, use fuel stabilizer at all times.

#### Gasoline/Alcohol blends

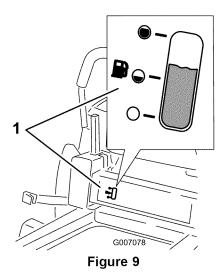

Gasohol (up to 10 percent ethyl alcohol, 90 percent unleaded gasoline by volume) is approved for fuel use by the engine manufacturer. Other gasoline/alcohol blends, such as E85, are not approved.

#### Gasoline/Ether blends

Methyl Tertiary Butyl Ether (MTBE) and unleaded gasoline blends (up to a maximum of 15 percent MTBE by volume) are approved for fuel use by the engine manufacturer. Other gasoline/ether blends are not approved.

# **Fuel Gauge**

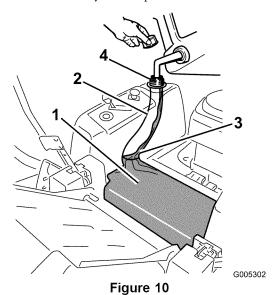

Use the fuel window below the operator to verify the level of gasoline before filling the tank (Figure 9).

1. Fuel gauge window

## Filling the Fuel Tank

- 1. Shut the engine off and set the motion controls to the park position. Raise the seat so the gas tank is visible while fueling.
- 2. Clean around the fuel tank cap and remove the cap.
- 3. Add unleaded regular gasoline until the body of the tank is full but fuel does not fill the neck of the tank (Figure 10). This space in the neck of the tank allows gasoline to expand. Do not fill the fuel tank completely full.
- 4. Install the fuel tank cap securely. Wipe up any gasoline that may have spilled.

- Gas tank body
- 3. Fill to here, approximately
- Gas tank neck
- Gas tank opening

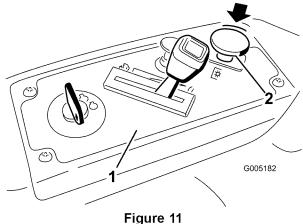

# **Checking the Engine Oil Level**

Before you start the engine and use the machine, check the oil level in the engine crankcase; refer to Checking the Oil Level in the Engine Maintenance section.

# Starting and Stopping the **Engine**

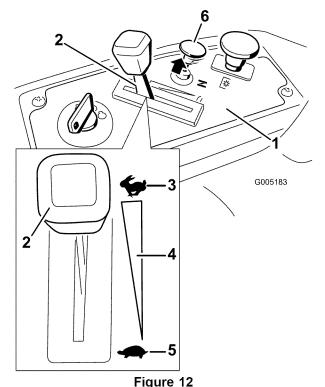

# Starting the Engine

- 1. Sit down on the seat and move the motion controls outward to the park position.
- 2. Disengage the blades by moving the blade control switch to Off (Figure 11)

- Control panel
- Blade control switch-Off position
- 3. Pull up on the Choke control before starting a cold engine (Figure 12).

**Note:** A warm or hot engine may not require choking.

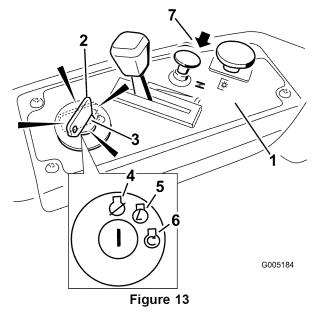

Figu

- 1. Control panel
- 2. Throttle
- 3. Fast

- Continuous variable setting
- 5. Slow
- 6. Choke control
- 4. Turn the ignition key to Start to energize the starter. When the engine starts, release the key (Figure 13).

**Important:** Do not engage the starter for more than 10 seconds at a time. If the engine fails to start, allow a 60 second cool-down period between attempts. Failure to follow these instructions can damage the starter motor.

1. Control panel

Off

- 5. Run
- 2. Ignition key—run position
- 6. Start
- 3. Ignition key—start position 7. Choke control
  - .....
- 5. After the engine starts, push down on the Choke control (Figure 13). If the engine stalls or hesitates, pull up on the Choke control and let the engine run for a few seconds. Then push down on the Choke control. Repeat this as required.

# **Operating the Blades**

The blade control switch, represented by a power take-off (PTO) symbol, engages and disengages power to the mower blades. This switch controls power to any attachments that draw power from the engine, including the mower deck and cutting blades.

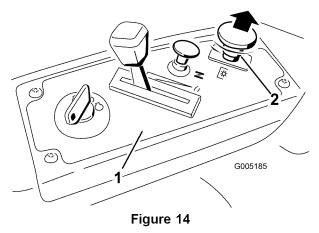

# **Engaging the Blades**

**Important:** Do not engage the blades when parked in tall grass. Belt or clutch damage can occur.

- 1. Release pressure on the motion control levers and place the machine in neutral.
- 2. Move the throttle to the Fast position.

**Note:** Always engage the blades with the throttle in the Fast position.

3. Pull up on the blade control switch to move it to the On position and engage the blades (Figure 14).

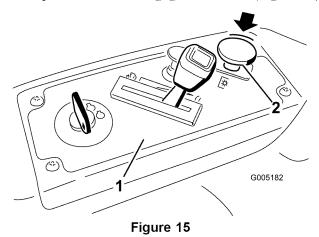

1. Control panel

2. Blade control switch—On position

## Disengaging the Blades

Push down on the blade control switch to move it to the Off position and disengage the blades (Figure 15).

1. Control panel

2. Blade control switch-Off

# Stopping the Engine

- 1. Disengage the blades by moving the blade control switch to Off (Figure 11).
- 2. Move the throttle lever to between Fast and half throttle (Figure 12).
- 3. Turn the ignition key to Off (Figure 13) and remove the key.

# The Safety Interlock System

## **A WARNING**

If safety interlock switches are disconnected or damaged the machine could operate unexpectedly causing personal injury.

- Do not tamper with the interlock switches.
- Check the operation of the interlock switches daily and replace any damaged switches before operating the machine.

# Understanding the Safety Interlock System

The safety interlock system is designed to prevent the engine from starting unless:

- The blades are disengaged.
- The motion control levers are in the park position.

The safety interlock system also is designed to stop the engine when the control levers are out of the park position and you rise from the seat when the blades are engaged.

## **Testing the Safety Interlock System**

Test the safety interlock system before you use the machine each time. If the safety system does not operate as described below, have an Authorized Service Dealer repair the safety system immediately.

- 1. While sitting on the seat, with the control levers in park position, and move the blade control switch to On. Try starting the engine; the engine should not crank.
- 2. While sitting on the seat, move the blade control switch to Off. Move either motion control lever to the center, unlocked position. Try starting the engine; the engine should not crank. Repeat with the other motion control lever.
- 3. While sitting on the seat, move the blade control switch to Off, and lock the motion control levers in the park position. Start the engine. While the engine is running, engage the blade control switch, and rise slightly from the seat; the engine should stop.
- 4. While sitting on the seat, move the blade control switch to Off, and lock the motion control levers in the park position. Start the engine. While the engine is running, move the motion control levers to the center, unlocked position, engage the blade control switch, and rise slightly from the seat; the engine should stop.

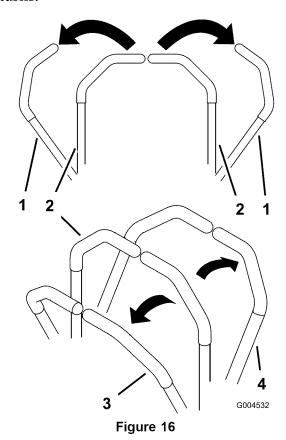

# **Driving Forward or Backward**

The throttle control regulates the engine speed as measured in rpm (revolutions per minute). Place the throttle control in the Fast position for best performance. Always operate in the full throttle position.

## **A WARNING**

The machine can spin very rapidly. The operator may lose control of the machine and cause personal injury or damage to the machine.

- Use caution when making turns.
- Slow the machine down before making sharp turns.

- Park (brake) position
- 3. Forward
- Center unlock position
- Backward

#### **Forward**

- 1. Move the levers to the center, unlocked position.
- 2. To go forward, slowly push the motion control levers forward (Figure 16).

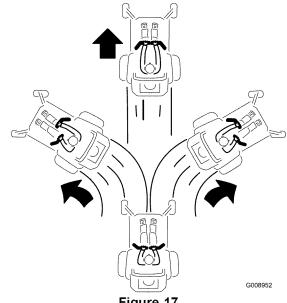

Figure 17

To go straight, apply equal pressure to both motion control levers (Figure 16).

To turn, release pressure on the motion control lever toward the direction you want to turn (Figure 16).

The farther you move the motion control levers in either direction, the faster the machine will move in that direction.

To stop, pull the motion control levers to neutral.

#### **Backward**

- 1. Move the levers to the center, unlocked position.
- 2. To go backward, slowly pull the motion control levers rearward (Figure 18).

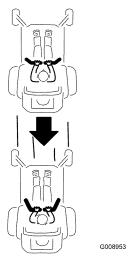

Figure 18

To go straight, apply equal pressure to both motion control levers (Figure 18).

To turn, release the pressure on the motion control lever toward the direction you want to turn.

To stop, push the motion control levers to neutral.

# **Stopping the Machine**

To stop the machine, move the motion control levers to neutral and outward to the park position, disengage the blade control switch, ensure the throttle is in the fast position, and turn the ignition key to off. Remember to remove the key from the ignition switch.

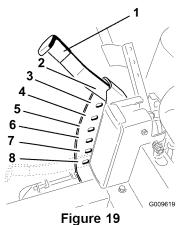

## **A WARNING**

Children or bystanders may be injured if they move or attempt to operate the mower while it is unattended.

Always remove the ignition key and move the motion control levers outward to the park position when leaving the machine unattended, even if just for a few minutes.

# **Adjusting the Height of Cut**

1. Raise the height-of-cut lever to the transport position, cutting height position **4.5** (also the 4-1/2 inch [115 mm]) (Figure 19).

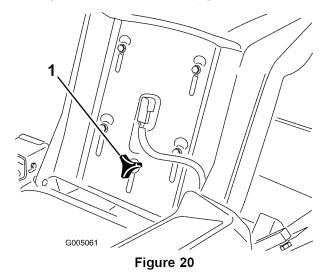

- Figu
- Height-of-cut lever
   4.5 inch (115 mm), Transport position
- 3. 4 inch (102 mm)
- 4. 3.5 inch (89 mm)
- 5. 3 inch (76 mm)
- 6. 2.5 inch (64 mm)
- 7. 2 inch (51 mm)
- 8. 1.5 inch (38 mm)
- 2. To adjust the height of cut, pull inward and up on the lever and move it to the desired position.

# **Positioning the Seat**

The seat can move forward and backward. Position the seat where you have the best control of the machine and are most comfortable.

1. Raise the seat and loosen the adjustment knob just enough that seat can move (Figure 20).

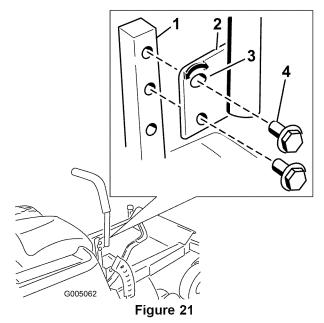

- 1. Adjustment knob
- 2. Move the seat to the desired position and tighten the knob.

# Adjusting the Motion Control Levers

## **Adjusting the Height**

The motion control levers can be adjusted higher or lower for maximum operator comfort.

- 1. Remove the 2 bolts holding the control lever to the control arm shaft (Figure 21).
- 2. Move the control lever to the next set of holes. Secure the lever with the 2 bolts (Figure 21).

- 1. Control arm shaft
- 3. Slotted, upper hole
- 2. Control lever
- 4. Bolt
- 3. Repeat the adjustment for the opposite control lever.

# **Adjusting the Tilt**

The motion control levers can be tilted fore or aft for maximum operator comfort.

- 1. Loosen the upper bolt holding the control lever to the control arm shaft.
- 2. Loosen the lower bolt just enough to pivot the control lever fore or aft (Figure 21). Tighten both bolts to secure the control in the new position.
- 3. Repeat the adjustment for the opposite control lever.

# Pushing the Machine by Hand

**Important:** Always push the machine by hand. Never tow the machine because damage may occur.

#### To Push the Machine

- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Locate the bypass levers at the rear of the machine, on the left and right side of the frame.

- 4. Move the bypass levers rearward and then down to lock them in place as shown in Figure 22 to disengage the wheel motors. Repeat this on each side of the machine.
- 5. Move the motion control levers inward to the neutral position.

The machine is now able to be pushed by hand.

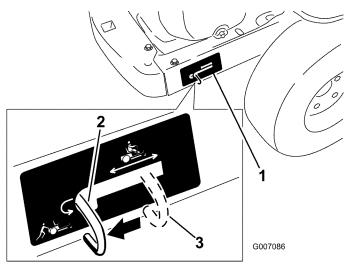

Figure 22
Right side shown

- 1. Bypass lever location
- 3. Lever position for operating the machine
- Lever position for pushing the machine

# To Operate the Machine

Move the bypass levers upward and push them forward, to the **middle** of the horizontal slot (Figure 22) to engage the wheel motors.

## **Grass Deflector**

The mower has a hinged grass deflector that disperses clippings to the side and down toward the turf.

## **A** DANGER

Without the grass deflector, discharge cover, or complete grass catcher assembly mounted in place, you and others are exposed to blade contact and thrown debris. Contact with rotating mower blade(s) and thrown debris will cause injury or death.

- Never remove the grass deflector from the mower because the grass deflector routes material down toward the turf. If the grass deflector is ever damaged, replace it immediately.
- Never put your hands or feet under the mower.
- Never try to clear discharge area or mower blades unless you move the blade control switch to Off and rotate the ignition key to Off. Also remove the key and pull the wire off the spark plug(s).

# **Operating Tips**

## **Fast Throttle Setting**

For best mowing and maximum air circulation, operate the engine at the Fast position. Air is required to thoroughly cut grass clippings, so do not set the height-of-cut so low as to totally surround the mower by uncut grass. Always try to have one side of the mower free from uncut grass, which allows air to be drawn into the mower.

## **Cutting a Lawn for the First Time**

Cut grass slightly longer than normal to ensure that the cutting height of the mower does not scalp any uneven ground. However, the cutting height used in the past is generally the best one to use. When cutting grass longer than six inches tall, you may want to cut the lawn twice to ensure an acceptable quality of cut.

#### Cut 1/3 of the Grass Blade

It is best to cut only about 1/3 of the grass blade. Cutting more than that is not recommended unless grass is sparse, or it is late fall when grass grows more slowly.

## **Mowing Direction**

Alternate mowing direction to keep the grass standing straight. This also helps disperse clippings which enhances decomposition and fertilization.

#### **Mow at Correct Intervals**

Normally, mow every four days. But remember, grass grows at different rates at different times. So to maintain the same cutting height, which is a good practice, mow more often in early spring. As the grass growth rate slows in mid summer, mow less frequently. If you cannot mow for an extended period, first mow at a high cutting height; then mow again two days later at a lower height setting.

## **Cutting Speed**

To improve cut quality, use a slower ground speed.

## **Avoid Cutting Too Low**

If the cutting width of the mower is wider than the mower you previously used, raise the cutting height to ensure that uneven turf is not cut too short.

## **Long Grass**

If the grass is ever allowed to grow slightly longer than normal, or if it contains a high degree of moisture, raise the cutting height higher than usual and cut the grass at this setting. Then cut the grass again using the lower, normal setting.

# When Stopping

If the machine's forward motion must be stopped while mowing, a clump of grass clippings may drop onto your lawn. To avoid this, move onto a previously cut area with the blades engaged.

# **Keep the Underside of the Mower Clean**

Clean clippings and dirt from the underside of the mower after each use. If grass and dirt build up inside the mower, cutting quality will eventually become unsatisfactory.

#### **Blade Maintenance**

Maintain a sharp blade throughout the cutting season because a sharp blade cuts cleanly without tearing or shredding the grass blades. Tearing and shredding turns grass brown at the edges, which slows growth and increases the chance of disease. Check the cutter blades daily for sharpness, and for any wear or damage. File down any nicks and sharpen the blades as necessary. If a blade is damaged or worn, replace it immediately with a genuine Toro replacement blade.

# **Maintenance**

**Note:** Determine the left and right sides of the machine from the normal operating position.

# Recommended Maintenance Schedule(s)

Maintenance Service Interval	Maintenance Procedure	
After the first 8 hours	Change the engine oil.	
Before each use or daily	<ul> <li>Check the safety interlock system.</li> <li>Check the engine oil level.</li> <li>Clean the air intake screen.</li> <li>Check the cutting blades.</li> <li>Inspect the grass deflector for damage</li> <li>Clean the mower housing.</li> </ul>	
Every 25 hours	<ul><li> Grease all lubrication points.</li><li> Check tire pressure.</li><li> Check the belts for wear/cracks.</li></ul>	
Every 100 hours	<ul> <li>Service the paper element. (more often in dusty, dirty conditions)</li> <li>Change the engine oil. (more often in dusty, dirty conditions)</li> <li>Check the spark plug(s).</li> <li>Replace the fuel filter.</li> </ul>	
Every 200 hours	<ul> <li>Replace the paper element. (more often in dusty, dirty conditions)</li> <li>Change the oil filter. (more often in dusty, dirty conditions)</li> </ul>	
Before storage	<ul> <li>Charge the battery and disconnect battery cables.</li> <li>Perform all maintenance procedures listed above before storage.</li> <li>Paint any chipped surfaces.</li> </ul>	

**Important**: Refer to your engine operator's manual for additional maintenance procedures.

# **A** CAUTION

If you leave the key in the ignition switch, someone could accidently start the engine and seriously injure you or other bystanders.

Remove the key from the ignition and disconnect the wire from the spark plug before you do any maintenance. Set the wire aside so that it does not accidentally contact the spark plug.

# Premaintenance Procedures

# Raising the Seat

Make sure the motion control levers are locked in the park position. Lift the seat forward.

The following components can be accessed by raising the seat:

- Serial plate
- Service decal
- Seat adjustment knob
- Fuel filter
- Fuses
- Battery cables

# **Accessing the Battery**

- 1. Raise the seat.
- 2. Remove the TORX® head fasteners (T25) securing the left cover to the frame as shown in Figure 23.

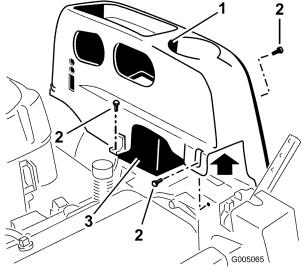

Figure 23

- 1. Left cover
- 3. Battery
- 2. Torx head fasteners (T25)
- 3. Lift the plastic cover away from the machine. Retain all fasteners.

Replace the cover and secure it to the frame using the fasteners removed previously.

# Lubrication

# **Greasing the Bearings**

**Service Interval:** Every 25 hours—Grease all lubrication points.

**Grease Type:** No. 2 General Purpose Lithium Base Grease

- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to the park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Clean the grease fittings (Figure 24 and Figure 25) with a rag. Make sure to scrape any paint off of the front of the fitting(s).

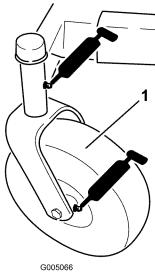

Figure 24

1. Front caster tire

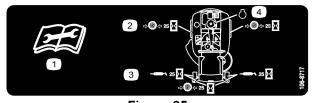

Figure 25

Located on the seat pan underside

- Read the instructions before servicing or performing maintenance.
- check tire pressure every 25 operating hours.
- 3. Grease every 25 operating hours.
- re every 4. Engine

- 4. Connect a grease gun to each fitting (Figure 24 and Figure 25). Pump grease into the fittings until grease begins to ooze out of the bearings.
- 5. Wipe up any excess grease.

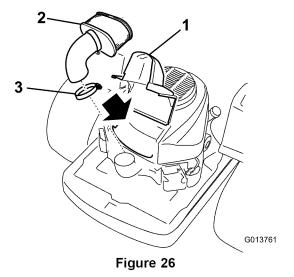

# Engine Maintenance

# Servicing the Air Cleaner

**Note:** Service the air cleaner more frequently (every few hours) if operating conditions are extremely dusty or sandy.

## **Removing the Element**

- 1. Park the machine on a level surface and disengage the blade control (PTO).
- 2. Move the motion control levers to the brake position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Clean around the air cleaner cover to prevent dirt from getting into the engine and causing damage. Lift the cover and remove the hose clamp securing the air cleaner assembly to the engine (Figure 26).
- 4. Loosen the hose clamp and remove the paper element (Figure 26).

- 1. Cover
- 2. Paper element

3. Hose clamp

# Cleaning the Element

Service Interval: Every 100 hours—Service the paper element. (more often in dusty, dirty conditions)

Every 200 hours/Yearly (whichever comes first)—Replace the paper element. (more often in dusty, dirty conditions)

- 1. Lightly tap the element on a flat surface to remove dust and dirt.
- 2. Inspect the element for tears, an oily film, and damage to the seal.

**Important:** Never clean the paper element with pressurized air or liquids, such as solvent, gas, or kerosene. Replace the paper element if it is damaged or cannot be cleaned thoroughly.

# **Servicing the Engine Oil**

**Oil Type:** Detergent oil (API service SF, SG, SH, SJ, or SL)

Crankcase Capacity: 1.9 qt (1.8 l), [when oil filter is removed: 2.2 qt (2.1 l)]

Viscosity: See the table below.

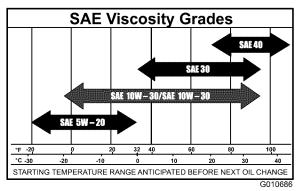

Figure 27

**Note:** Using multi grade oils (5W-20, 10W-30, and 10W -40) will increase oil consumption. Check oil level more frequently when using them.

## **Checking the Engine Oil Level**

Service Interval: Before each use or daily

**Note:** Check the oil when the engine is cold.

# **A WARNING**

Contact with hot surfaces may cause personal injury.

Keep hands, feet, face, clothing and other body parts away the muffler and other hot surfaces.

**Important:** Do not overfill the crankcase with oil because damage to the engine may result. Do not run engine with oil below the low mark because the engine may be damaged.

1. Park the machine on a level surface, disengage the blade control switch, stop the engine, engage parking brake, and remove the key.

- 2. Make sure the engine is stopped, level, and is cool so the oil has had time to drain into the sump.
- 3. To keep dirt, grass clippings, etc., out of the engine, clean the area around the oil fill cap/dipstick before removing it.
- 4. Stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position (Figure 28).

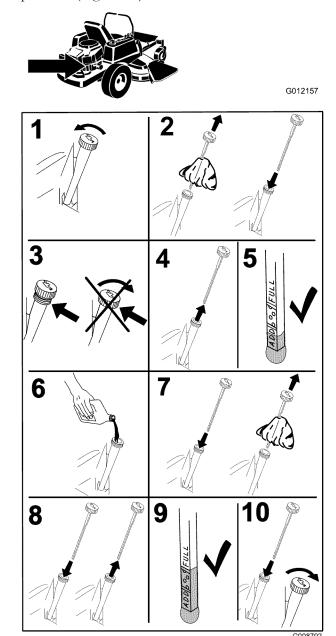

Figure 28

## **Changing the Engine Oil**

**Service Interval:** After the first 8 hours—Change the engine oil.

Every 100 hours—Change the engine oil. (more often in dusty, dirty conditions)

**Note:** Dispose of the used oil at a recycling center.

- 1. Start the engine and let it run five minutes. This warms the oil so it drains better.
- 2. Park the machine so that the drain side is slightly lower than the opposite side to assure the oil drains completely.
- 3. Disengage the PTO, move the motion control levers to the neutral locked position and set the parking brake.
- 4. Stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position (Figure 29).

G012157

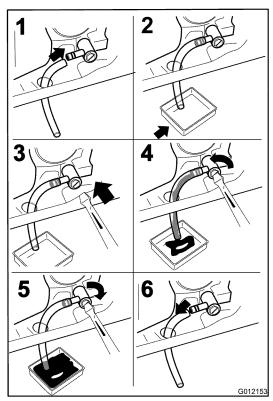

Figure 29

5. Slowly pour approximately 80% of the specified oil into the filler tube and slowly add the additional oil to bring it to the **Full** mark (Figure 30).

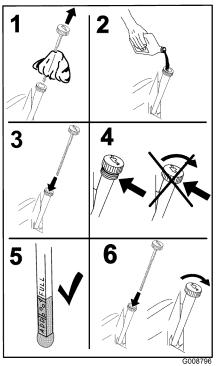

Figure 30

## **Changing the Engine Oil Filter**

Service Interval: Every 200 hours—Change the oil filter. (more often in dusty, dirty conditions)

**Note:** Change the engine oil filter more frequently when operating conditions are extremely dusty or sandy.

- 1. Drain the oil from the engine; refer to Changing the Engine Oil.
- 2. Change the engine oil filter (Figure 31).

G012157

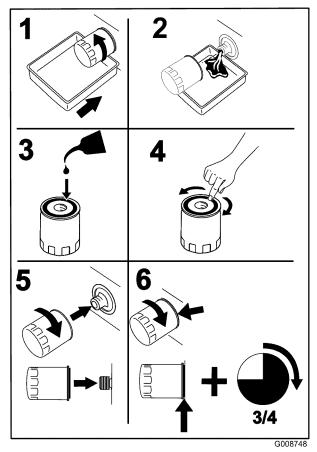

Figure 31

**Note:** Ensure the oil filter gasket touches the engine

3. Fill the crankcase with the proper type of new oil; refer to Changing the Oil.

and then an extra 3/4 turn is completed.

# Servicing the Spark Plug

**Service Interval:** Every 100 hours—Check the spark plug(s).

Make sure the air gap between the center and side electrodes is correct before installing the spark plug. Use a spark plug wrench for removing and installing the spark plug(s) and a gapping tool/feeler gauge to check and adjust the air gap. Install a new spark plug(s) if necessary.

**Type:** NGK BPR4ES (or equivalent)

**Air Gap:** 0.030 inch (0.76 mm)

## Removing the Spark Plug

- 1. Disengage the PTO, move the motion control levers to the neutral locked position and set the parking brake.
- 2. Stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.

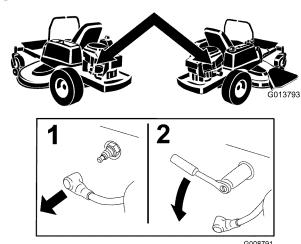

Figure 32

**Note:** Due to the deep recess around the spark plug, blowing out the cavity with compressed air is usually the most effective method for cleaning. The spark plug is most accessible when the blower housing is removed for cleaning.

# **Checking the Spark Plug**

**Important:** Never clean the spark plug(s). Always replace the spark plug(s) when it has: a black coating, worn electrodes, an oily film, or cracks.

If you see light brown or gray on the insulator, the engine is operating properly. A black coating on the insulator usually means the air cleaner is dirty.

Set the gap to 0.030 inches (0.76 mm).

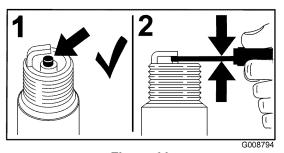

Figure 33

## Installing the Spark Plug

Tighten the spark plug(s) to 16 ft-lb (22 N-m).

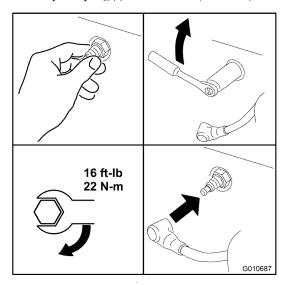

Figure 34

# **Cleaning the Cooling System**

Clean the air intake screen from grass and debris before each use.

- 1. Disengage the blade control switch and move the control levers to the neutral locked position and apply the parking brake.
- 2. Stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Remove the air intake screen, air cleaner cover, and fan housing.
- 4. Clean debris and grass from the parts.
- 5. Install the air intake screen, air cleaner cover, and fan housing.

# Fuel System Maintenance

## **A** DANGER

In certain conditions, gasoline is extremely flammable and highly explosive. A fire or explosion from gasoline can burn you and others and can damage property.

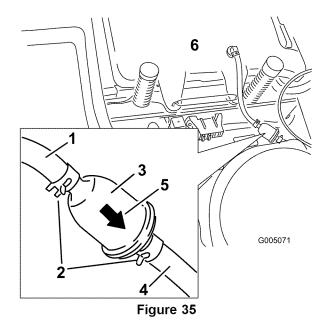

- Perform any fuel related maintenance when the engine is cold. Do this outdoors in an open area. Wipe up any gasoline that spills.
- Never smoke when draining gasoline, and stay away from an open flame or where a spark may ignite the gasoline fumes.

# Replacing the Fuel Filter

**Service Interval:** Every 100 hours—Replace the fuel filter

Never install a dirty filter if it is removed from the fuel line.

- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to the park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Raise the seat and locate the fuel line coming from the fuel tank below. The fuel filter is in the fuel line between the tank and engine.

- 1. Fuel line from tank
- 2. Hose clamp
- 3. Filter

- 4. Fuel line to engine
- 5. Flow direction arrow
- 6. Fuel tank
- 4. Squeeze the ends of the hose clamps together and slide them away from the filter (Figure 35).
- 5. Remove the filter from the fuel lines.
- 6. Install a new filter with the flow direction arrow coming from the fuel tank and pointing to the engine. Move the hose clamps close to the filter (Figure 35) to secure it in place.

# Electrical System Maintenance

# **WARNING**

#### CALIFORNIA Proposition 65 Warning

Battery posts, terminals, and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and reproductive harm.

Wash hands after handling.

# **Charging the Battery**

## Removing the Battery

## **A WARNING**

Battery terminals or metal tools could short against metal machine components causing sparks. Sparks can cause the battery gasses to explode, resulting in personal injury.

- When removing or installing the battery, do not allow the battery terminals to touch any metal parts of the machine.
- Do not allow metal tools to short between the battery terminals and metal parts of the machine.
- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to the park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Remove the left side console to access the battery. Refer the Accessing the Battery procedure in the Premaintenance Procedures for instructions.
- 4. Disconnect the negative (black) ground cable from the battery post (Figure 36). Retain all fasteners.

## **A WARNING**

Incorrect battery cable routing could damage the machine and cables causing sparks. Sparks can cause the battery gasses to explode, resulting in personal injury.

- Always disconnect the negative (black) battery cable before disconnecting the positive (red) cable.
- Always connect the positive (red) battery cable before connecting the negative (black) cable.
- 5. Slide the rubber cover up the positive (red) cable. Disconnect the positive (red) cable from the battery post (Figure 36). Retain all fasteners.
- 6. Remove the battery hold-down (Figure 36) and lift the battery from the battery tray.

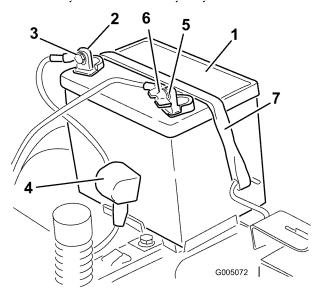

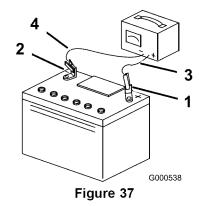

Figure 36

- 1. Battery
- 2. Positive battery post
- 3. Bolt, washer, and nut
- 4. Terminal boot
- 5. Negative battery post
- 6. Wing nut, washer, and bolt
- 7. Battery hold-down

# **Charging the Battery**

**Service Interval:** Before storage—Charge the battery and disconnect battery cables.

- 1. Remove the battery from the chassis; refer to Removing the Battery.
- 2. Charge the battery for a minimum of 1 hour at 6 to 10 amps. Do not overcharge the battery.
- 3. When the battery is fully charged, unplug the charger from the electrical outlet, then disconnect the charger leads from the battery posts (Figure 37).

- 1. Positive battery post
- 3. Red (+) charger lead
- 2. Negative battery post
- 4. Black (-) charger lead

**Note:** Do not run the machine with the battery disconnected, electrical damage may occur.

## Installing the Battery

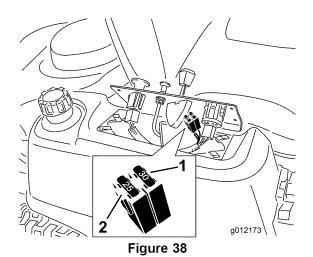

- 1. Position the battery in the tray with the terminal posts toward the operating position (Figure 36).
- 2. Install the positive (red) battery cable to the positive (+) battery terminal using the fasteners removed previously.
- 3. Install the negative battery cable to the negative (-) battery terminal using the fasteners removed previously.
- 4. Slide the red terminal boot onto the positive (red) battery post.
- 5. Secure the battery with the hold-down (Figure 36).
- 6. Install the left side console. Refer to the Accessing the Battery procedure in Premaintenance Procedures for instructions.

# Servicing the Fuses

The electrical system is protected by fuses. It requires no maintenance; however, if a fuse blows, check the component/circuit for a malfunction or short.

#### Fuse:

- Main F1-30 amp, blade-type
- Charge Circuit F2-25 amp, blade-type
- 1. Remove the four screws securing the control panel to the machine. Retain all fasteners
- 2. Lift the control pane up to access the main wiring harness and fuse block (Figure 38).
- 3. To replace a fuse, pull out on the fuse to remove it (Figure 38).

1. Main-30 amp

2. Charge circuit-25 amp

4. Return the control panel to its original position. Use the four screws removed previously to secure the panel to the machine.

# Drive System Maintenance

# **Checking the Tire Pressure**

**Service Interval:** Every 25 hours—Check tire pressure.

Maintain the air pressure in the front and rear tires as specified. Uneven tire pressure can cause uneven cut. Check the pressure at the valve stem (Figure 39). Check the tires when they are cold to get the most accurate pressure reading.

#### **Tire Pressures**

Model	Rear Tire	Front Tire (caster wheels)
74365		50 pai (244 kDa)
74366	13 psi (90 kPa)	50 psi (344 kPa)
74376		45 psi (310 kPa)

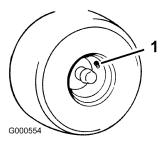

Figure 39

1. Valve stem

# Mower Maintenance

# **Servicing the Cutting Blades**

Maintain sharp blades throughout the cutting season because sharp blades cut cleanly without tearing or shredding the grass blades. Tearing and shredding turns grass brown at the edges, which slows growth and increases the chance of disease.

Check the cutter blades daily for sharpness, and for any wear or damage. File down any nicks and sharpen the blades as necessary. If a blade is damaged or worn, replace it immediately with a genuine Toro replacement blade. For convenient sharpening and replacement, you may want to keep extra blades on hand.

# **A WARNING**

A worn or damaged blade can break, and a piece of the blade could be thrown into the operator's or bystander's area, resulting in serious personal injury or death.

- Inspect the blade periodically for wear or damage.
- Replace a worn or damaged blade.

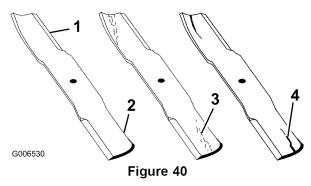

# Before Inspecting or Servicing the Blades

Park the machine on a level surface, disengage the blade control switch, and move the motion control levers outward to the park position. Stop the engine and remove the key.

# Inspecting the Blades

**Service Interval:** Before each use or daily—Check the cutting blades.

- 1. Inspect the cutting edges (Figure 40). If the edges are not sharp or have nicks, remove and sharpen the blades; refer to Sharpening the Blades.
- 2. Inspect the blades, especially the curved area (Figure 40). If you notice any damage, wear, or a slot forming in this area (item 3 in Figure 40), immediately install a new blade.

- 1. Cutting edge
- 2. Curved area
- 3. Wear/slot forming
- 4. Damage

## **Checking for Bent Blades**

**Note:** The machine must be on a level surface for the following procedure.

- 1. Raise the mower deck to the highest height-of-cut position; also considered the 'transport' position.
- 2. While wearing thickly padded gloves or other adequate hand protection slowly rotate blade to be measure into a position that allows effective measurement of the distance between the cutting edge and the level surface the machine is on.

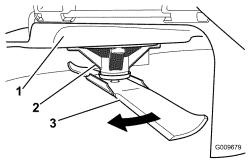

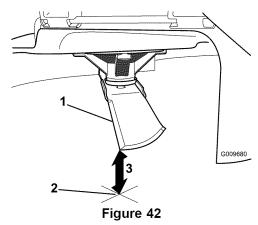

Figure 41

- 1. Deck
- 2. Spindle housing
- 3. Blade

3. Measure from the tip of the blade to the flat surface here.

- 1. Blade, in position for measuring
- 2. Level surface
- 3. Measured distance between blade and surface (A)
- 4. Rotate the same blade 180 degrees so that the opposing cutting edge is now in the same position.

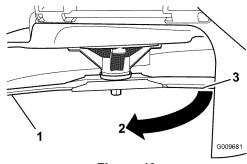

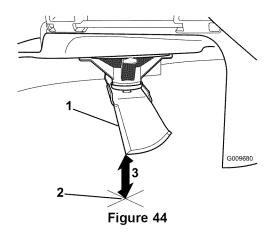

Figure 43

- 1. Blade, side previously measured
- 2. Measurement position used previously
- 3. Opposing side of blade being moved into measurement position
- 5. Measure from the tip of the blade to the flat surface here. The variance should be no more than 1/8 inch (3mm).

- 1. Opposing blade edge, in position for measuring
- 2. Level surface
- 3. Second measured distance between blade and surface (B)

## **A WARNING**

A blade that is bent or damaged could break apart and could seriously injure or kill you or bystanders.

- Always replace bent or damaged blade with a new blade.
- Never file or create sharp notches in the edges or surfaces of blade.
- A. If the difference between A and B is greater than 1/8 inch (3mm) replace the blade with a new blade. Refer to Removing the Blades and Installing the Blades.

**Note:** If a bent blade is replaced with a new one and the dimension obtained continues to exceed 1/8 inch (3mm), the blade spindle could be bent. Contact an Authorized Toro Dealer for service.

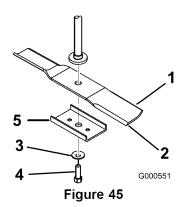

B. If the variance is within constraints, move to the next blade..

Repeat this procedure on each blade.

## Removing the Blades

The blades must be replaced if a solid object is hit, if the blade is out of balance, or the blade is bent. To ensure optimum performance and continued safety conformance of the machine, use genuine Toro replacement blades. Replacement blades made by other manufacturers may result in non-conformance with safety standards.

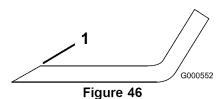

Hold the blade end using a rag or thickly-padded glove. Remove the blade bolt, curved washer, blade stiffener, and blade from the spindle shaft (Figure 45).

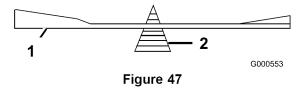

- 1. Sail area of blade
- 2. Blade
- Curved washer
- 4. Blade bolt
- Blade stiffener

## **Sharpening the Blades**

1. Use a file to sharpen the cutting edge at both ends of the blade (Figure 46). Maintain the original angle. The blade retains its balance if the same amount of material is removed from both cutting edges.

- 1. Sharpen at original angle
- 2. Check the balance of the blade by putting it on a blade balancer (Figure 47). If the blade stays in a horizontal position, the blade is balanced and can be used. If the blade is not balanced, file some metal off the end of the sail area only (Figure 46). Repeat this procedure until the blade is balanced.

1. Blade

2. Balancer

# Installing the Blades

1. Install the blade onto the spindle shaft (Figure 45).

**Important:** The curved part of the blade must be pointing upward toward the inside of the mower to ensure proper cutting.

- 2. Install the blade stiffener, the curved washer (cupped side toward the blade) and the blade bolt (Figure 45).
- 3. Torque the blade bolt to 35-65 ft-lb (47-88 N-m).

# **Leveling the Mower Deck**

Check to ensure the mower deck is level any time you install the mower or when you see an uneven cut on your lawn.

The mower deck must be checked for bent blades prior to leveling; any bent blades must be removed and replaced. Refer to the Checking for Bent Blades procedure before continuing.

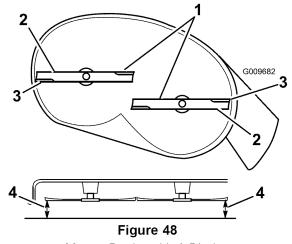

The mower deck must be leveled side-to-side first then the front to rear slope can be adjusted.

#### Requirements:

- The machine must be on a level surface.
- All four tire must be properly inflated. Refer to Checking the Tire Pressure in the Drive System Maintenance section.

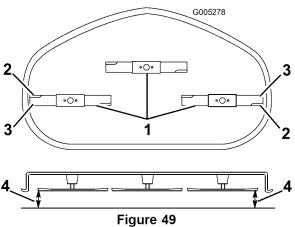

## Side-to-Side Leveling

- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to the park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Set the height-of-cut lever to middle position.
- 4. Carefully rotate the blades so that they are all side to side (Figure 48 and Figure 49).

Mower Decks with 2 Blades

- Blades side to side
- 2. Sail area of blade
- 3. Outside cutting edges
- Measure from the tip of the blade to the flat surface here

Mower Decks with 3 Blades

- 1. Blades side to side
- 2. Sail area of blade
- Outside cutting edges
- Measure from the tip of the blade to the flat surface here
- 5. Measure between the outside cutting edges and the flat surface (Figure 48 and Figure 49). If both measurements are not within 3/16 inch (5 mm), an adjustment is required; continue with this procedure.
- 6. Move to the left side of the machine. Loosen, but do not remove, the rear locking nut on the hanger bracket (Figure 50).
- 7. Loosen the side locking nut on the hanger bracket just enough to allow the eccentric plate to be adjusted (Figure 50). Use a 3/8 inch drive extension on a socket wrench to manipulate the eccentric plate. Use the wrench to reposition the height of the mower deck and adjust to the desired height.
- 8. Stop the deck at the adjusted position and tighten the side locking nut on the hanger bracket to hold the new position (Figure 50). Tighten the rear locking nut on the hanger bracket.
- 9. Continue leveling the deck by checking the front-to-rear blade slope; refer to Adjusting the Front-to-Rear Blade Slope.

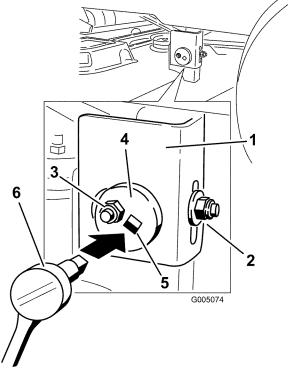

Figure 50

- 1. Hanger bracket
- 2. Rear locking nut
- 3. Side locking nut
- 4. Eccentric adjustment plate
- 5. Socket wrench hole
- 6. Socket wrench with 3/8 inch extension

# Adjusting the Front-to-Rear Blade Slope

Check the front-to-rear blade level any time you install the mower. If the front of the mower is more than 5/16 inch (7.9 mm) lower than the rear of the mower, adjust the blade level using the following instructions:

- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to the park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Set the height-of-cut lever to middle position.

**Note:** Check and adjust the side-to-side blade level if you have not checked the setting; refer to Side-to-Side Leveling.

4. Carefully rotate the blades so they are facing front to rear (Figure 51 and Figure 52).

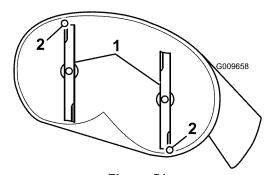

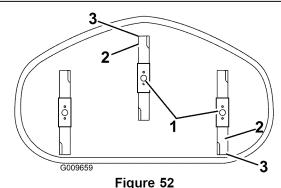

Figure 51

Mower Decks with 2 Blades

- 1. Blades front to rear
- 2. Measure from the tip of the blade to the flat surface here

Mower Decks with 3 Blades

- 1. Blades front to rear
- Measure from the tip of the blade to the flat surface here
- 2. Outside cutting edges
- 5. Measure from the tip of the front blade to the flat surface and the tip of the rear blade to the flat surface (Figure 51 and Figure 52). If the front blade tip is not 1/16-5/16 inch (1.6-7.9 mm) lower than the rear blade tip, adjust the front locknut.
- 6. To adjust the front-to-rear blade slope, rotate the adjustment nut in the front of the mower (Figure 53).

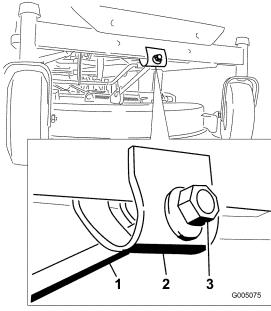

Figure 53

- 1. Adjusting rod
- 2. Adjusting block
- 3. Lock nut
- 7. To raise the front of the mower, tighten the adjustment nut. To lower the front of the mower, loosen the adjustment nut.
- 8. After adjustment, check the front-to-rear slope again. Continue adjusting the nut until the front blade tip is 1/16-5/16 inch (1.6-7.9 mm) lower than the rear blade tip (Figure 51 and Figure 52).
- 9. When the front-to-rear blade slope is correct check the side-to-side level of the mower again; refer to Leveling the Mower from Side-to-Side.

### **Removing the Mower**

- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to the park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Lower the height-of-cut lever to the lowest position.
- 4. Remove the hairpin cotter and clevis pin from the front support rod (Figure 54). Carefully lower the front of the mower deck to the ground.

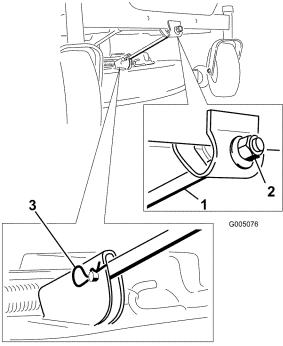

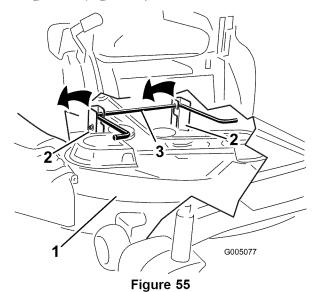

Figure 54

- 1. Front support rod
- Hairpin cotter and clevis pin
- 2. Locking nut
- 5. Lift the mower deck and hanger brackets clear of the rear lift rod and lower the mower carefully to the ground (Figure 55).

- 1. Mower deck
- Hanger bracket
- 3. Rear lift rod
- 6. Slide the mower deck rearward to remove the mower belt from the engine pulley.
- 7. Slide the mower deck out from underneath the machine.

Note: Retain all parts for future installation.

### **Mower Belt Maintenance**

### Inspecting the Belts

**Service Interval:** Every 25 hours—Check the belts for wear/cracks.

Check the belts for cracks, frayed edges, burn marks, or any other damage. Replace damaged belts.

### **Replacing the Mower Belt**

Squealing when the belt is rotating, blades slipping when cutting grass, frayed belt edges, burn marks and cracks are signs of a worn mower belt. Contact an Authorized Service Dealer to replace the mower belt if any of these conditions are evident.

## **Installing the Mower**

- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to the park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Slide the mower under the machine.
- 4. Lower the height-of-cut lever to the lowest position.
- 5. Lift the rear of the mower deck and guide the hanger brackets over the rear lift rod (Figure 55).
- 6. Attach the front support rod to the mower deck with the clevis pin and hairpin cotter (Figure 54).
- 7. Install the mower belt onto the engine pulley; refer to Replacing the Mower Belt.

### **Replacing the Grass Deflector**

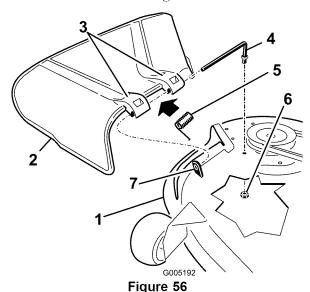

**Service Interval:** Before each use or daily—Inspect the grass deflector for damage

### **A WARNING**

An uncovered discharge opening could allow the lawn mower to throw objects in the operator's or bystander's direction and result in serious injury. Also, contact with the blade could occur.

Never operate the machine without grass deflector, discharge cover or grass collection system in place.

Inspect the grass deflector for damage before each use. Replace any damaged parts before use. 1. Locate items shown in Figure 56.

- 1. Mower deck
- 2. Grass deflector
- 3. Grass deflector bracket
- 4. Rod

- 5. Spring
- 6. Nut (3/8 inch)
- 7. Short stand-off
- 2. Remove the nut (3/8 inch) from the rod under the mower (Figure 56).
- 3. Slide the rod out of the short stand-off, spring, and grass deflector (Figure 56). Remove the damaged or worn grass deflector.
- 4. Replace the grass deflector (Figure 56).
- 5. Slide rod, straight end, through the rear grass deflector bracket.
- 6. Place the spring on the rod, with end wires down, and between the grass deflector brackets. Slide rod through second grass deflector bracket (Figure 56).
- 7. Insert rod at front of grass deflector into short stand-off on deck. Secure rear end of rod into the mower with a nut (3/8 inch) (Figure 56).

**Important:** The grass deflector must be spring loaded in the down position. Lift the deflector up to test that it snaps to the full down position.

# Cleaning

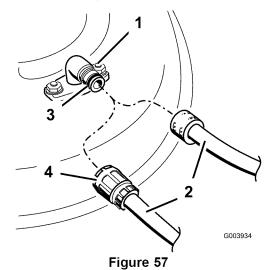

# Washing the Underside of the Mower

**Service Interval:** Before each use or daily—Clean the mower housing.

Wash the underside of the mower after each use to prevent grass buildup for improved mulch action and clipping dispersal.

- 1. Park the machine on a level surface and disengage the blade control switch.
- 2. Move the motion control levers outward to the park position, stop the engine, remove the key, and wait for all moving parts to stop before leaving the operating position.
- 3. Attach the hose coupling to the end of the mower washout fitting, and turn the water on high (Figure 57).

**Note:** Spread petroleum jelly on the washout fitting O-ring to make the coupling slide on easier and protect the O-ring.

- . Washout fitting
- 2. Hose

- 3. O-ring
- 4. Coupling
- 4. Lower the mower to the lowest height-of-cut.
- 5. Sit on the seat and start the engine. Engage the blade control switch and let the mower run for one to three minutes.
- 6. Disengage the blade control switch, stop the engine, and remove the ignition key. Wait for all moving parts to stop.
- 7. Turn the water off and remove the coupling from the washout fitting.

**Note:** If the mower is not clean after one washing, soak it and let it stand for 30 minutes. Then repeat the process.

8. Run the mower again for one to three minutes to remove excess water.

### **A WARNING**

A broken or missing washout fitting could expose you and others to thrown objects or blade contact. Contact with blade or thrown debris can cause injury or death.

- Replace broken or missing washout fitting immediately, before using mower again.
- Never put your hands or feet under the mower or through openings in the mower.

# **Storage**

### Cleaning and Storage

- 1. Disengage the blade control switch, move the motion controls outward to the park position, stop the engine, and remove the kev.
- 2. Remove grass clippings, dirt, and grime from the external parts of the entire machine, especially the engine. Clean dirt and chaff from the outside of the engine cylinder head fins and blower housing.

**Important:** You can wash the machine with mild detergent and water. Do not pressure wash the machine. Avoid excessive use of water, especially near the control panel, engine, hydraulic pumps, and motors.

- 3. Service the air cleaner; refer to Servicing the Air Cleaner in the Engine Maintenance section.
- 4. Grease and oil the machine; refer to the Lubrication section.
- 5. Change the crankcase oil and filter; refer to Servicing the Engine Oil in the Engine Maintenance section.
- 6. Check the tire pressure; refer to Checking the Tire Pressure in the Drive System Maintenance section.
- 7. Charge the battery; refer to Servicing the Battery in the Electrical System Maintenance section.
- 8. Check the condition of the blades; refer to Servicing the Cutting Blades in the Mower Maintenance section.
- 9. Prepare the machine for storage when non-use occurs over 30 days. Prepare the machine for storage as follows.
- 10. Add a petroleum based stabilizer/conditioner to the fuel in the tank. Follow the mixing instructions from the stabilizer manufacturer. Do not use an alcohol based stabilizer (ethanol or methanol).

**Note:** A fuel stabilizer/conditioner is most effective when mixed with fresh gasoline and used at all times.

Run the engine to distribute the conditioned fuel through the fuel system (5 minutes).

Stop the engine, allow it to cool, and drain the fuel tank; refer to Draining the Fuel Tank in the Fuel System Maintenance section.

Restart the engine and run it until it stops.

Choke the engine. Start and run the engine until it will not start.

Dispose of fuel properly. Recycle pursuant to local codes.

# **Important:** Do not store stabilizer/conditioned gasoline over 30 days.

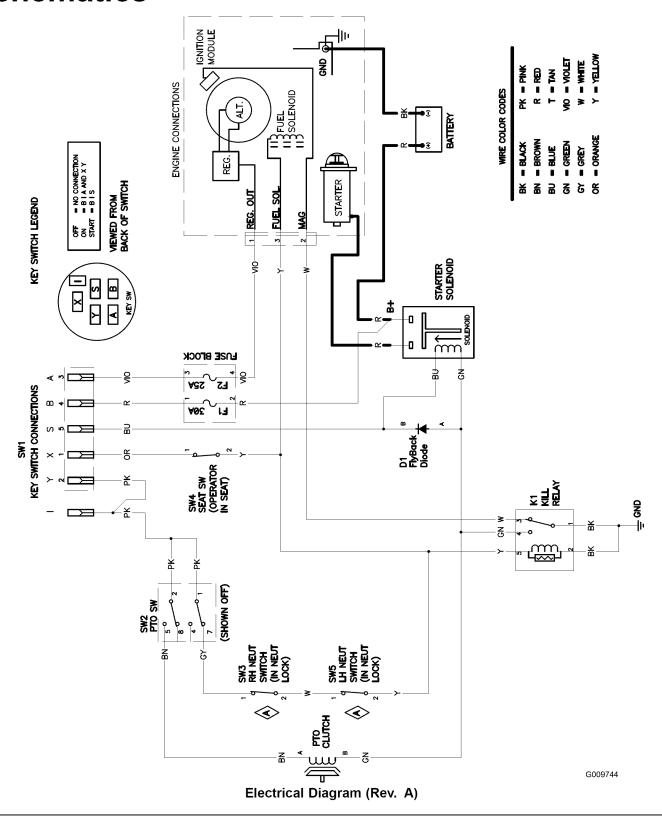

- 11. Remove the spark plug(s) and check its condition; refer to Servicing the Spark Plug in the Engine Maintenance section. With the spark plug(s) removed from the engine, pour two tablespoons of engine oil into the spark plug hole. Use the starter to crank the engine and distribute the oil inside the cylinder. Install the spark plug(s). Do not install the wire on the spark plug(s).
- 12. Clean any dirt and chaff from the top of the mower.
- 13. Scrape any heavy buildup of grass and dirt from the underside of the mower, then wash the mower with a garden hose.
- 14. Check the condition of the drive and mower belts.
- 15. Check and tighten all bolts, nuts, and screws. Repair or replace any part that is worn or damaged.
- 16. Paint all scratched or bare metal surfaces. Paint is available from your Authorized Service Dealer.
- 17. Store the machine in a clean, dry garage or storage area. Remove the key from the ignition switch and keep it in a memorable place. Cover the machine to protect it and keep it clean.

# **Troubleshooting**

Problem	Possible Cause	Corrective Action
The engine overheats.	1. The engine load is excessive.	1. Reduce ground speed.
	2. The oil level in the crankcase is low.	2. Add oil to the crankcase.
	The cooling fins and air passages under the engine blower housing are plugged.	Remove the obstruction from the cooling fins and air passages.
	4. The air cleaner is dirty.	Clean or replace the air cleaner element.
	Dirt, water, or stale fuel is in fuel system.	5. Contact an Authorized Service Dealer
The starter does not crank	The blade control switch is engaged.	Move the blade control switch to Disengaged.
	The motion control levers are not in the park position.	Move the motion control levers outward to the park position.
	The operator is not seated.	3. Sit on the seat.
	4. The battery is dead.	4. Charge the battery.
	The electrical connections are corroded or loose.	Check the electrical connections for good contact.
	6. A fuse is blown.	6. Replace the fuse.
	7. A relay or switch is damaged.	7. Contact an Authorized Service Dealer.
The engine will not start, starts hard, or	1. The fuel tank is empty.	1. Fill the fuel tank.
fails to keep running.	2. The choke is not on.	Move the choke lever to On.
	3. The air cleaner is dirty.	Clean or replace the air cleaner element.
	The spark plug wire(s) is loose or disconnected.	4. Install the wire(s) on the spark plug.
	The spark plug(s) is pitted, fouled, or the gap is incorrect.	Install a new, correctly gapped spark plug(s).
	6. There is dirt in fuel filter.	6. Replace the fuel filter.
	7. Dirt, water, or stale fuel is in fuel system.	7. Contact an Authorized Service Dealer.
	8. There is incorrect fuel in the fuel tank.	8. Drain the tank and replace the fuel with the proper type.
	9. The oil level in the crankcase is low.	Add oil to the crankcase.
The engine loses power.	1. The engine load is excessive.	1. Reduce ground speed.
	The air cleaner is dirty.	2. Clean the air cleaner element.
	3. The oil level in the crankcase is low.	3. Add oil to the crankcase.
	The cooling fins and air passages under the engine blower housing are plugged.	Remove the obstruction from the cooling fins and air passages.
	The spark plug(s) is pitted, fouled, or the gap is incorrect.	Install a new, correctly gapped spark plug(s).
	6. The vent in the fuel cap is closed.	6. Open the vent in the fuel cap.
	7. There is dirt in the fuel filter.	7. Replace the fuel filter.
	Dirt, water, or stale fuel is in the fuel system.	8. Contact an Authorized Service Dealer.
	9. There is incorrect fuel in the fuel tank.	Drain the tank and replace the fuel with the proper type.
The machine does not drive.	1. The bypass valves are open	Close the tow valves.
	The traction belts are worn, loose, or broken.	2. Contact an Authorized Service Dealer.
	<ul><li>3. The traction belts are off of the pulleys.</li><li>4. The transmission has failed.</li></ul>	<ol> <li>Contact an Authorized Service Dealer.</li> <li>Contact an Authorized Service Dealer.</li> </ol>
		Januari an Addition Edd Corvido Bodioi.

Problem	Possible Cause	Corrective Action
There is abnormal vibration.	The engine mounting bolts are loose.	Tighten the engine mounting bolts.
	The engine pulley, idler pulley, or blade pulley is loose.	2. Tighten the appropriate pulley.
	3. The engine pulley is damaged.	Contact an Authorized Service Dealer.
	The cutting blade(s) is/are bent or unbalanced.	Install a new cutting blade(s).
	5. A blade mounting bolt is loose.	5. Tighten the blade mounting bolt.
	6. A blade spindle is bent.	6. Contact an Authorized Service Dealer.
Uneven cutting height.	The blade(s) is not sharp.	1. Sharpen the blade(s).
	2. A cutting blade(s) is/are bent.	2. Install a new cutting blade(s).
	3. The mower is not level.	Level the mower from side-to-side and front-to-rear.
	4. An anti-scalp wheel is not set correctly.	4. Adjust the anti-scalp wheel height.
	5. The underside of the mower is dirty.	5. Clean the underside of the mower.
	6. The tire pressure is incorrect.	6. Adjust the tire pressure.
	7. A blade spindle is bent.	7. Contact an Authorized Service Dealer.
The blades do not rotate.	1. The drive belt is worn, loose or broken.	Install a new drive belt.
	2. The drive belt is off of the pulley.	Install the drive belt and check the adjusting shafts and belt guides for the correct position.
	The mower belt is worn, loose, or broken.	Install a new mower belt.

# TORO<sub>®</sub>

### The Toro Total Coverage Guarantee

A Three-Year Limited Warranty (Limited Warranty for Commercial Use)

TimeCutter Z Mowers

# Conditions and Products Covered under The Toro Total Coverage Guarantee

The Toro® Company and its affiliate, Toro Warranty Company, pursuant to an agreement between them, jointly promise to repair any Toro Product used for residential purposes\*, if defective in materials or workmanship or if it stops functioning due to the failure of a component for the period listed below.

This Warranty applies to all TimeCutter Z Mowers and their accessories. This warranty covers the cost of parts and labor, but you must pay transportation costs.

The following time periods apply from the date of purchase:

Products	Warranty Period
TimeCutter Z Mowers	3 years
Attachments (for above units)	3 years
Batteries	1 year

### **Limited Warranty for Commercial Use**

Gas-powered Toro Products used at more than one location, or used for institutional or rental use, are warranted for 30 days against defects in materials or workmanship, 90 days on engines. Components failing due to normal wear are not covered by this warranty.

### **Owner Responsibilities**

You must maintain your Toro Product by following the maintenance procedures described in the *Operator's Manual*. Such routine maintenance, whether performed by a dealer or by you, is at your expense.

### **Items and Conditions Not Covered**

There is no other express warranty except for special emission system coverage and engine warranty coverage on some products. This express warranty does not cover the following:

- Cost of regular maintenance service or parts, such as filters, fuel, lubricants, oil changes, spark plugs, air filters, blade sharpening/worn blade on mowers, cable/linkage adjustments, or brake and clutch adjustments
- Any product or part which has been altered or misused and requires replacement or repair due to accidents or lack of proper maintenance
- Repairs necessary due to improper battery care, failure to use fresh fuel (less than one month old), or failure to properly prepare the unit prior to any period of non-use over one month
- Pickup and delivery charges

- Operational misuse, neglect, or accidents
- Repairs or attempted repairs by anyone other than an Authorized Toro Service Dealer

### **Instructions for Obtaining Warranty Service**

If you think that your Toro Product contains a defect in materials or workmanship, follow this procedure:

- Contact any Authorized Toro Service Dealer to arrange service at their dealership. To locate a dealer convenient to you, refer to the Yellow Pages of your telephone directory (look under "Lawn Mowers") or access our web site at www.Toro.com. You may also call the numbers listed in item #3 to use the 24-hour Toro Dealer locator system.
- Bring the product and your proof of purchase (sales receipt) to the Service Dealer. The dealer will diagnose the problem and determine if it is covered under warranty.
- If for any reason you are dissatisfied with the Service Dealer's analysis or with the assistance provided, contact us at:

Customer Care Department, Consumer Division Toro Warranty Company 8111 Lyndale Avenue South Bloomington, MN 55420-1196 Toll free at 866-216-6029 (U.S. customers) Toll free at 866-216-6030 (Canadian customers)

#### **General Conditions**

All repairs covered by these warranties must be performed by an Authorized Toro Service Dealer using Toro approved replacement parts. Repair by an Authorized Toro Service Dealer is your sole remedy under this warranty.

Neither The Toro® Company nor Toro Warranty Company is liable for indirect, incidental, or consequential damages in connection with the use of the Toro Products covered by these warranties, including any cost or expense of providing substitute equipment or service during reasonable periods of malfunction or non-use pending completion of repairs under these warranties.

Some states do not allow exclusions of incidental or consequential damages, so the above exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

#### Countries Other than the United States or Canada

Customers who have purchased Toro products exported from the United States or Canada should contact their Toro Distributor (Dealer) to obtain guarantee policies for your country, province, or state. If for any reason you are dissatisfied with your Distributor's service or have difficulty obtaining guarantee information, contact the Toro importer. If all other remedies fail, you may contact us at Toro Warranty Company.

\*Residential purposes means use of the product on the same lot as your home. Use at more than one location, or institutional or rental use, is considered commercial use, and the commercial use warranty would apply.
