This is the safety alert symbol.

This symbol alerts you to potential hazards that can kill or hurt you and others.

All safety messages will follow the safety alert symbol and either the word "DANGER" or "WARNING." These words mean:

 **DANGER**

You can be killed or seriously injured if you don't immediately follow instructions.

 **WARNING**

You can be killed or seriously injured if you don't follow instructions.

All safety messages will tell you what the potential hazard is, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.

Electrical requirements

! WARNING

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

Volts: 120 V.A.C.

Hertz: 60 Hz

NOTE: The Water Kettle has a 3 prong grounded plug. To reduce the risk of electrical shock, this plug will fit in an outlet only one way. If the plug does not fit in the outlet, contact a qualified electrician. Do not modify the plug in any way.

Do not use an extension cord. If the power supply cord is too short, have a qualified electrician or serviceman install an outlet near the appliance.

A short power supply cord (or detachable power supply cord) should be used to reduce the risk resulting from becoming entangled in or tripping over a longer cord.

Longer detachable power supply cords or extension cords are available and may be used.

If a longer detachable power supply cord or extension cord is used:

- The marked electrical rating of the cord set or extension cord should be at least as great as the electrical rating of the appliance.
- If the appliance is of the grounded type, the extension cord should be a grounding-type 3-wire cord.
- The cord should be arranged so that it will not drape over the countertop or tabletop where it can be pulled on by children or tripped over unintentionally.

OPERATING THE ELECTRIC KETTLE

Before first use

Before first use, fill the Electric Kettle to the maximum level, then boil and discard the water. If the cord is too short, turn the Kettle base over and unwrap any additional cord needed to plug in where desired.

NOTE: The Electric Kettle is designed for water only. Do not put any other liquids or substances in the Electric Kettle.

Heating water

1 Remove the lid from the kettle. Fill the electric kettle with water.

2 Replace the lid.

3 Place the electric kettle on the base.

4 Turn the electric kettle ON by pressing the ON/OFF switch down. The LED indicator will light. Kettle will automatically turn OFF when water has finished boiling.

5 You may also turn it off by raising the switch to the OFF position.

6 Unplug cord when Electric Kettle is not in use.

CARE AND CLEANING

Cleaning the exterior

IMPORTANT: Before cleaning always disconnect the Electric Kettle from electrical outlet. Make sure the Electric Kettle has cooled completely.

1 The exterior of the Electric Kettle may be cleaned with a damp cloth. Dry and polish the Electric Kettle with a soft cloth. Abrasives and scouring agents of any kind are not recommended.

Cleaning the filter

The Electric Kettle features a removable mesh filter that traps scale deposits for cleaner water. The filter will need to be cleaned periodically—more often if you have hard water.

1 To access filter: Open the lid; the filter is located behind spout inside Electric Kettle. Grasp the top of the filter to remove.

2 Clean under hot water with a soft brush or cloth to remove deposits, and replace filter by sliding the filter into the slot behind the spout.

NOTE: If calcium deposits remain on the filter, let it stand overnight in a solution of water and white vinegar. Rinse the filter thoroughly and replace in the Electric Kettle.

CARE AND CLEANING

Removing mineral deposits from the interior

To get the best performance from your Electric Kettle, decalcification will be necessary. Calcium deposits may form on the interior metal parts of the Electric Kettle. The cleaning interval will depend on the hardness of the water you put in the Electric Kettle.

English

- 1 Fill the Electric Kettle with 1 cup (.25 L) white vinegar. Add 3 cups (.75 L) water. Turn kettle ON.

- 2 Empty solution from Electric Kettle and repeat process twice. Electric Kettle is now ready for use.

TROUBLESHOOTING

Cord seems too short:

If the cord is too short, turn the Kettle base over, and unwrap any additional cord needed to plug in where desired.
