Information

This DVD recorder can record to DVD-R and
DVD-RW discs. When recording, you will need to
select a recording format between Video mode and
VR mode depending on the disc format. The disc
format for DVD-R is always "Video format," so a
recording format will be "Video mode".
On the other hand, when recording to DVD-RW, a
recording format will be "Video mode" or "VR
mode" because a disc format is available between
"Video Recording format" and "Video format" for
DVD-RW.

Logo	Attributes
DVD R W **DVD-RW**	12cm, single-sided, single layer disc Approx. max. recording time (SEP mode): 600 minutes (4.7GB)
DVD R R 4.7 **DVD-R**	12cm, single-sided, single layer disc Approx. max. recording time (SEP mode): 600 minutes (4.7GB)

About Video mode and VR (Video Recording) mode

Video mode is the same recording format as DVD-
Video discs purchased locally, so that you can play in
most DVD players. To play in other DVD players,
you will need to finalize (see page 39). Unless final-
ized, you can play, record additionally or edit discs
recorded in Video mode with this unit.
VR (Video Recording) mode is a basic recording
format for DVD-RW. You can record and edit
repeatedly.

DVD players with **RW COMPATIBLE** are capable of playing
DVD-RW recorded in VR mode.

Disc type	Disc format	Functions

DVD recorder. Copy-protected video includes
DVD-Video discs and some satellite broadcasts.
If copy-protected material is encountered during a
recording, recording will pause or stop automatically
and an error message will be displayed on-screen.
Video that is "copy-once only" can only be recorded
using a DVD-RW disc in VR mode with CPRM (see
below).
When recording a TV broadcast or through an
external input, you can display copy control informa-
tion on screen.

> **What is "CPRM"?**
> CPRM is a copy protection system with scram-
> ble system regarding the recording of "copy
> once" broadcast programs. CPRM stands for
> Content Protection for Recordable Media.
> This DVD recorder is CPRM compatible, which
> means that you can record copy-once broad-
> cast programs, but you cannot then make a
> copy of those recordings. CPRM recordings can
> only be made on DVD-RW discs formatted in
> VR mode, and CPRM recordings can only be
> played on players that are specifically compati-

Troubleshooting

Before requesting service for this DVD recorder, check the table below for a possible cause of the problem you are experiencing. Some simple checks or a minor adjustment on your part may eliminate the problem and restore proper operation.

Symptom	Remedy
Power	
The power does not turn on.	• Check that the AC power cord is connected securely.
Picture	
There is no picture.	• Re-connect the connecting cord securely. • The connecting cords are damaged. • The Setup Display appears. Press RETURN ↵ button to turn off the display. • Check the connection to your TV (page 13). • Check if the INTERLACE/PROGRESSIVE mode is set correctly according to your TV. See page 13. • Switch the input selector on your TV (such as to "LINE1") so that the signal from the DVD recorder appears on the TV screen.
Picture noise appears.	• The disc is dirty or flawed. • If the picture output signal from the DVD recorder passes through your VCR to get to your TV, or if you are connected to a combination TV/VIDEO player, the copy-protection signal applied to some DVD programs could affect picture quality. If you still experience this problem even when you connect the DVD recorder directly to your TV, try connecting the DVD recorder to your TV's S-VIDEO input.
TV program reception does not fill the screen.	• Try to set the channels with "Auto Preset" in SETUP menu (page 18). • Select a channel of any TV program using the CH▲/▼ buttons.
TV program pictures are distorted.	• Adjust TV antenna. • Adjust the picture (see the TV's instruction manual). • Place the DVD recorder and TV farther apart. • Place the TV and any bunched antenna cables farther apart.
TV channels cannot be changed.	• Switch the input to TV. • Connect the antenna cable correctly (page 13).
The playback picture or TV program from the equipment connected through the DVD recorder is distorted.	• If the playback picture output from a DVD player, VCR, or tuner goes through the DVD recorder before reaching your TV, the copy-protection signal applied to some programs could affect picture quality. Disconnect the playback equipment in question and connect it directly to your TV.
Sound	
There is no sound.	• The disc is dirty or flawed. • Re-connect all connections securely. • The connecting cord is damaged. • Check the connections to the amplifier input. • The input source setting on the amplifier is incorrect. • The recorder is in pause mode or in Slow-motion Play mode. • The recorder is in fast forward or fast reverse mode. • If the audio signal does not come through the DIGITAL OUT (COAXIAL) jack, check the Audio Setup settings (pages 88-89).
Sound is noisy.	• The disc is dirty or flawed. • When playing a DTS-CD, noise may come from the speakers. This DVD recorder is not compatible with DTS-CD.
No DTS sound is output	• This DVD recorder is not compatible with DTS sound.

Troubleshooting (cont'd)

Symptom	Remedy
Playback	
The disc does not play.	• No disc is inserted. • A blank disc is inserted. • The disc is upside down. Insert the disc with the labeled side facing up. • The disc is not correctly inserted. • The DVD recorder cannot play certain discs (such as a CD-ROM) (page 41). • The region code on the DVD VIDEO does not match the DVD recorder (page 41). • Moisture has condensed inside the DVD recorder. Remove the disc and leave the DVD recorder turned on for about half an hour until the moisture evaporates (page 4). • If the disc was recorded on another recorder, the DVD recorder cannot play the disc if it was not finalized (page 39).
The disc does not start playback from the beginning.	• Resume play was activated (page 46). Press STOP ■ button twice. • You have inserted a disc whose Title menu or DVD menu automatically appears on the TV screen when it is first insert.
The DVD recorder starts playing from the disc automatically.	• The DVD VIDEO features an auto playback function.
Some functions such as Stop, Search, or Slow-motion Play cannot be performed.	• Depending on the disc, you may not be able to do some of the operations above. See the instruction manual supplied with the disc.
The language for the sound track cannot be changed.	• Multilingual tracks are not recorded on the DVD VIDEO, DVD-R or DVD-RW being played. • The DVD VIDEO prohibits the changing of the language for the sound track. • Try changing the language using the DVD VIDEO's menu.
The subtitle language cannot be changed or turned off.	• Multilingual subtitle are not recorded on the DVD VIDEO. • The DVD VIDEO prohibits changing of the subtitles. • Try changing the subtitle using the DVD VIDEO's menu.
The angles cannot be changed.	• Multi-angles are not recorded on the DVD VIDEO being played. • You are trying to change the angles when 📹 icon does not appear on the TV screen (page 56). • The DVD VIDEO prohibits changing angles. • Try changing the angle using the DVD VIDEO's menu.
Recording/Timer recording/Editing	
The channel cannot be changed from the channel you are recording.	• Set the TV's input to "TV."
Recording does not start immediately after you press REC button.	• An unused DVD-R or DVD-RW was inserted. It takes a while for the DVD recorder to automatically format a DVD-RW.
Nothing was recorded even though you set the timer setting correctly.	•There was a power failure during recording. • The DVD recorder's internal clock stopped due to a power failure that lasted for more than 30 seconds. Reset the clock (pages 22-23). • Disconnect the AC power cord from the AC outlet, and connect it again. • The program contains copy protection signals that restricts copying. • The timer setting overlapped with another setting that was set later or has priority.

Others	
The DVD recorder does not operate properly.	• When static electricity, etc., causes the DVD recorder to operate abnormally, unplug the DVD recorder and then plug it in again.
The disc tray does not open when you press OPEN/CLOSE ▲ button.	• It may take a few seconds for the disc tray to open after you have recorded or edited a disc. • This is because the DVD recorder is adding disc data to the disc.

Others

Analog audio

An electrical signal that directly represents sound. Compare this to digital audio which can be an electrical signal, but is an indirect representation of sound. See also Digital audio.

Aspect ratio

The width of a TV screen relative to its height. Conventional TVs are 4:3 (in other words, the screen is almost square); widescreen models are 16:9 (the screen is almost twice as wide as it is high).

Chapter

Just as a book is split up into several chapters, a title on a DVD disc is usually divided into chapters. See also Title.

Component video output

Each signal of luminance(Y) and component(PB/CB, PR/CR) is independent to output so that you can experience picture color as it is. Also, due to compatibility with progressive video (525p/480p), you can experience higher-density picture than that in interlace (525i/480i).

CPRM
(Content Protection for Recordable Media)

CPRM is a copy protection system with scramble system regarding the recording of "copy-once" broadcast programs (e.g. some satellite broadcasts).

Digital audio

An indirect representation of sound by numbers. During recording, the sound is measured at discrete intervals (44, 100 times a second for CD audio) by an analog-to-digital converter, generating a stream of numbers. On playback, a digital-to-analog converter generates an analog signal based on these numbers. See also Sampling frequency and Analog audio.

Dolby Digital

The system to compress digital sound developed by Dolby Laboratories. It offers you sound of stereo(2ch) or multi-channel audio (up to 5.1ch).

MP3 (MPEG Audio Layer 3)

MP3 is a method of compressing files. You can copy MP3 files on CD-R/RW discs from the computer and play the files on this unit.

Finalize

To make DVD discs, which have been recorded on, possible to play in DVD players. With this DVD recorder, it is possible to finalize DVD-R/DVD-RW discs.

PCM
(Pulse Code Modulation)

The most common system of encoding digital audio, found on CDs and DAT. Excellent quality, but requires a lot of data compared to formats such as Dolby Digital and MPEG audio. For compatibility with digital audio recorders (CD, MD and DAT) and AV amplifiers with digital inputs, this unit can convert Dolby Digital and MPEG audio to PCM. See also Digital audio.

Playlist

From this list you can play contents of a disc as your desired order or in sequence. Also it is allowed to search a specific scene directly.

Regions code

Regions associate discs and players with particular areas of the world. This unit will only play discs that have compatible region codes. You can find the region code of your unit by looking on the rear panel. Some discs are compatible with more than one region (or all regions).

Sampling frequency

The rate which sound is measured by a specified interval to turn into digital audio data. The numbers of sampling in one second defines as sampling frequency. The higher the rate, the better the sound quality as possible as it is.

SAP
(Secondary Audio Program)

Sub-audio channel which is delivered separately from main-audio channel. This audio channel is used as an alternate in bilingual broadcasting.

S-Video output

It delivers independently each signal of color(C) and luminance(Y) to TV as video signals, so that higher-quality picture will be gained.

Title (DVD only)

A collection of chapters on DVD disc. See also chapter.

Track

Audio CDs use tracks to divide up the content of a disc. The DVD equivalent is called a chapter. See also Chapter.
