

# INSTALLATION

## How to install your wine cellar

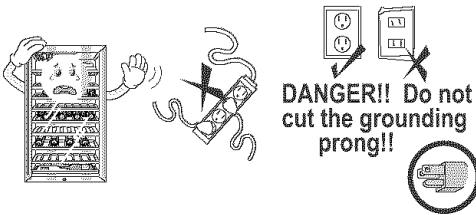

- 1 Select a good location. Place your wine cellar where it is easy to use.

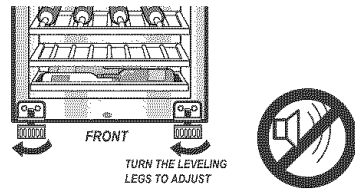

- 3 Clean with soft towels dipped in warm water or detergent. If neutral detergent is used, it must be cleaned with clean towels.

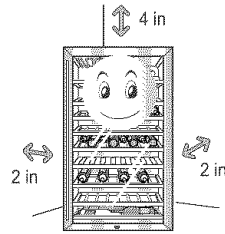

- 5 Connect it to a suitable and properly grounded outlet (115V, 15 Amps outlet).

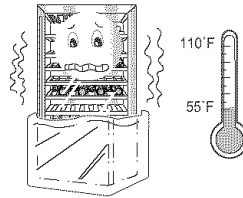

- 2 Wine cellar must be leveled on a firm floor. This will help eliminate noise and vibrations.

- 4 For a better performance of your wine cellar, air circulation must be adequate.

- 6 Install this wine cellar in an area where the temperature is between 55°F (13°C) and 110°F (43°C). If the temperature around wine cellar is too low or high, cooling ability may be lessened.

- 7 Wine will reach desired temperature after four hours from initial installation.

Now your wine cellar is ready to use!!!
