ONE YEAR FULL WARRANTY ON CRAFTSMAN® PRODUCT

If this Craftsman product falls due to a defect in material or workmanship within one year from the date of purchase, RETURN ITTO THE NEAREST SEARS STORE OR PARTS AND REPAIR CENTER OR OTHER CRAFTSMAN OUTLET IN THE UNITED STATES FOR FREE REPLACEMENT.

This warranty does not include expendable parts such as lamps, batteries, bits or blades.

If this Craftsman product is used for commercial or rental purposes, this warranty applies for only 90 days from the date of purchase. This warranty gives you specific legal rights, and you may also have other rights, which vary from state to state.

Sears. Roebuck and Co., Hoffman Estates, IL 60179

SAVE THESE INSTRUCTIONS! READ ALL INSTRUCTIONS!

SAFETY SYMBOLS

The purpose of safety symbols is to attract your attention to possible dangers. The safety symbols, and the explanations with them, deserve your careful attention and understanding. The symbol varnings DO NOT by themselves eliminate any danger. The instructions and warnings they give are no substitutes for proper accident prevention measures.

A WARNING: BE SURE to read and understand all safety instructions in this manual, including all safety slert symbols auch as "DANGER", "WARNING" and "CAUTION", BEFORE using this saw Faiture to follow all instructions listed below may result in electric shock, the and/or serious personal injury.

SYMBOL MEANING

A SAFETY ALERT SYMBOL: Indicates DANGER, WARNING, OR CAUTION. May be used in conjunction with other symbols or pictographs

DANGER: Failure to obey this safety warning WILL result in death or serious injury to yourself or to others. Always follow the safety precautions to reduce the risk of fire, electric shock and personal injury.

MARNING Failure to obey this safety warning CAN result in death or serious injury to yourself or to others. Always failuw the safety precautions to reduce the risk of fire, electric shock and personal injury.

⚠ CAUTION

Failure to obey this safety warning MAY result in personal injury to yourself or others or property damage. Always tollow the safety precautions to reduce the risk of fire, electric shock and personal injury.

DAMAGE PREVENTION AND INFORMATION MESSAGES
These inform user of important information and/or instructions that could lead to equipment or other property damage it not followed. Each message is preceded by the word "NOTE:"

NOTE: Equipment and/or property damage may result if these instructions are not followed.

AWARNING: The operation of any sobre saw can result in foreign objects being thrown into your eyes, which can result in severe eye damage. Before beginning power tool operation, ALWAYS wour safety goggles or earley jetanes with side shield and a full-face shield when needed. We recommend a Wide Vision Salety Mask for use over eyeglasses or standard safety glasses with side shield, available at Sears Stores or other Craitsman Outlets.

SAFETY INSTRUCTIONS

SAFETY PRECAUTIONS FOR LASERS

This cabre caw has a built-in laser light. The laser is a Class Illa and emits output power of a maximum 2.5mW and 625-655mm wavelengths. These lasers do not normally present an optical hazard. However, DO NOT stare at the beam as this can cause flash blindness.

The following label is on your tool. It indicates where the saw emits the laser light. BE AWARE of the laser light location when using. ALWAYS MAKE SURE that any bystanders in the vicinity of the are made aware of the dangers of looking directly into the baser.

⚠ WARNING: LASER LIGHT, LASER RADIATION. Avoid Direct Eye Exposure, DO NOT stare into beam. Only turn laser beam on when the saw is on the workpiece. Class Illa laser.

⚠WARNING: Use of controls, adjustments or performance of procedur other than those specified in this manual may result in hazardous radiation

MARNING: The use of optical instruments such as, but not limited to, telescopes or transits to view the laser beam will increase eye hazard.

- DO NOT remove or deface any product labels. Removing product labels increases the risk of exposure to laser radiation.
- 2. The later beam can be harmful to the eyes. ALWAYS avoid direct eye exposure. DO NOT look directly into the laser beam output aperture during operation. DO NOT project the laser beam directly into the eyes of others. Turn laser on ONLY when making suits.
- Leser enhancing safety glasses are included to enhance the laser beam in bright light conditions. DO NOT wear these glasses if they interfere with the safe operation of this saw.
- 4 The laser on the circular saw is not a toy, ALWAYS keep out of the reach of children. The laser light emitted from this device SHOULD NEVER be directed towards any person for any reason.
- BE SURE the laser beam is aimed at a workpiece (such as wood or rough coaled surfaces) that does not have a reflective surface.
- 6. DO NOT use on surfaces such as sheel steel that have a shirty reflective surface. The shirty surface could reflect the beam back at the operator. Be aware that laser light reflected off of a mirror or any other reflective surfaces can also be dangerous.
- 7 ALWAYS turn the laser beam off when not in use. Leaving the tool on increases the risk of someone inadvertently staring into the laser's beam.

SAFETY PRECAUTIONS FOR LASERS cont.

 \triangle CAUTION: ALWAYS follow only the instructions contained in this manual when using this laser. Use of this feature in any manner other than what appears in this manual may result in a hazardous radiation exposure.

- 8. DO NOT altempt to modify the performance of this laser device in any way. This may result in a dangerous exposure to laser radiation
- ALWAYS use only the accessories that are recommended by Sears for use with this product. Use of accessories that have been designed for use with other laser tools could result in serious injury.
- 10 For further information regarding lasers, ruler to ANSI-Z136.1 The STANDARD FOR THE SAFE USE OF LASERS, available from the Laser institute of America (407) 380-1553

WORK AREA SAFETY

- Keep your work area clean and well RL Cluttered workbenches and dark areas invite accidents.
- DO NOT operate power tools in explosive aimospheres, such as in the presence
 of flammedia liquids, gases, or dust. Fower tools create sparks which may ignite
 the dust or times.
- Keep bystanders, children and visitors away while operating a power tool.
 Distractions can cause you to lose control.
- 4. Make your workshop childproof with padlocks and master switches. Lock tools away when not in use.
- MAKE SURE the work area has ample lighting so you can see the work and that there are no obstructions that will interfere with sale operation BEFORE using your case.

PERSONAL SAFETY

- KNOW your power tool. Read the operator's menual carefully. Learn the naw's applications and limitations as well as the specific potential hazards related to this tool.
- 2 STAY ALERT, watch what you are doing and use common sense when operating a power tool
- DO NOT use tool while bired or under the influence of drugs, alcohol or medication. A mament of inationition while operating power tools may result in scricus personal injury.
- A DRESS property. DO NOT wear loose clothing or jewetry. Pull back long heir. Keep your hair, clothing, and gloves away from moving parts. Loose clothing, or long hair can be caught in moving parts. Air vents often cover moving parts and should also be avoided.
- S AVOID accidental starting. Be sure switch to in "OFF" position before plugging in OO NOT carry tools with your finger on the switch. Carrying tools with your tinger on the switch or plugging in tools that have the switch in the "ON" position invites
- E REMOVE adjusting keys or blade wrenches before turning the tool "OH". A wrench that is left attached to a rotating part of the tool may result in personal injury.

PERSONAL SAFETY cont.

- Do not overreach. Keep proper footing and balance at all times. Proper footing and balance enables briter control of the tool in unexpected situations.
- 8 ALWAYS SECURE YOUR WORK. Use clamps or a vice to hold work when practical it is saler than using your hand and trees both hands to operate tool.
- 9 USE SAFETY EQUIPMENT. Always wear eye protection. Dust mask, non-skid safety shoes, hard hat or hearing protection misst be used for appropriate conditions.
- 10. DO NOT USE ON A LADDER or unstable support. Stable feeting on a solid surface enables belter central of the fool in unexpected situations.

TOOL USE AND CARE SAFETY

⚠WARNING: BE SURE to read and understand all instructions before operating this caw. Failure to follow all instructions fisted below may result in electric shock, fire and/or serious personal injury.

- ALWAYS use clamps or other practical ways to secure and support the workplace to a stable platform. Holding the work by hand or against your body is unstable and may lead to fees of central
- 2 DD NOT force the tool. Use the correct tool and blade for your application. The correct tool and blade will do the job better and calor at the rate for which its designed.

 3. DO NOT use the tool if switch does not turn it. "On" or "Off". Any tool that cannot be controlled with the switch is dangerous and must be repaired.
- DISCOINECT the plug from the power source before making any adjustments, changing accessories or storing the tool. Such preventive solely measures reduce the risk of starting the tool accidentally.
- 5. HEVER leave the tool running. ALWAYS turn it off. DO NOT leave the tool until it comes to a complete stop.
- STORE ldle tools out of the reach of children and other untrained persons. Tools are dangerous in the hands of untrained users.
- MAINTAIN tools with care. Keep cutting tools sharp and clean. Properly maintained tools with sharp cutting edges are less likely to bind and are easier to control
- CHECK for misalignment or binding of moving parts, breakage of parts, and any
 other condition that may affect the tools operation. If damaged, have the tool cerviced
 before using. Many accidents are caused by poorly maintained tools.
- USE ONLY accessories that are recommended for this tool. Accessories that may be suitable for one tool may become hazardous when used on another tool.

ELECTRICAL SAFETY

 \triangle WARNING: Do not permit fingers to touch the terminals of plug when installing or removing the plug from the outlet.

1 Double insulated tools are equipped with a polarized plug (one blade is wider than the other). This plug will fit in a polarized outlet only one way. If the plug does not fit fully in the cubic, inverse the plug. If it still obes not if, contact a qualified electrician to install a polarized outlet. Do not change the plug in any way.

ELECTRICAL SAFETY cont.

Couble insulation
 eliminates the need for the three-wire grounded power cord and grounded power supply system. Applicable only to Cless II (enable-insulated) tools. This cable caw is a double inculated tool.

AWARNING: Double insulation DOES NOT take the place of normal safety presautions when operating this tool.

- 3. BEFORE plugging in the toot, BE SURE that the outlet voltage supplied is within the voltage marked on the tools data plate. DO NOT use "AC only" raiset tools with a DC power supply.

 4. AVOID body contact with grounded surfaces, such as pipes, radiators ranges and strigerators. There is an increased risk of electric shock if your body is grounded.

 5. DO NOT oxpose power tools to rain or wat conditions or use power tools in wat or damp locations. Water entering a power tool will increase the risk of electric shock.

 6. INSPECT tool conds for damage. Have damaged tool cords repaired at a Sears Service Center. BE SURE to day constantly aware of the cord location and keep it well sway from the motion plates.

 7. DO NOT abuse the cord. NEVER use the cord to carry the tool by or to pull the plug from the outlet. Keep cord away from heat, oil, sharp edges or moving parts. Replace damaged cords immediately. Damaged cords increase the risk of electric shock.

EXTENSION CORDS

EATENSION CORDS

Use a proper extension cord, ONLY use cords listed by Underwitters Laboratories (UL). Other extendion cords can cause a drop in line voltage, resulting in a lose of power and overheating of tool. For this tool an AWG (American Wire Gauge) size of at least 14-gauge is recommended for an extension cord of 25-ft, or less in length, Use 12-gauge for an extension cord of 50-ft. Extension cord of 50-ft and order of 100-ft or longer are not recommended. Romember, a smaller wire gauge size has greater capacity than a larger number (14-gauge wire has more capacity than 16-gauge wire; 12-gauge wire has more capacity than 16-gauge wire; 12-gauge wire has more capacity than 16-gauge wire has more cap

△ CAUTION: Keep the extension cord clear of the working area. Position the cord so that it will not get caught on lumber, tools or other obstructions while you are working with a power tool.

⚠ WARNING: Check extension cords before each use. If damaged replace immediately, Never use tool with a damaged cord since touching the damaged area could cause electrical shock, resulting in serious injury.

SAFETY SYMBOLS FOR YOUR TOOL

The label on your tool may include th	e following symbols
V committee in a second of the	\d\t.
A	. Amps
Hz	
W	
min.	
2222	.Direct current
Ba	
-/mln	
A	Indicates danger, warning or caution.
A12	It means attention! Your salety is involved.

SERVICE SAFETY

- If any part of this saw is missing or should break, bend, or fall in any way; or should any electrical component fall to perform properly: SHUT OFF the power switch and remove the saw plug from the power course and have the missing, damaged or falled parts replaced BEFORE resuming operation.
- Tool service must be performed only at a Sears Parts and Repair Center. Service or maintenance performed by unqual fied personnel could result in a risk of injury.
- 3. When servicing a tool, use only identical replacement parts. Follow instructions in the maintenance section of this manual. Use of unauthorized parts or fallure to follow maintenance instructions may create a risk of electric shock or injury.

SAFETY RULES FOR SABRE SAWS

A DANGER Keep hands away from cutting area and blade. Keep your second hand on the suxiliary handle or motor housing. If both hands are holding the saw, the blade cannot cut them.

△ CAUTION: Blades coast after saw is switched off

- KEEP your body positioned to either side of the saw blade and not in direct line with the saw blade.
 DD NOT reach under the workpiece. The blade extends under the workpiece when saw is cutting.
 DD NOT touch the blade or the workpiece immediately after operation; they may be extremely hat and could burn your skin.

- 4 DD NOT cut an oversized workpiece.
 5 CHECK for the proper clearance under the workpiece before cutting so that the blade will not strike the workbench or material under the workpiece.

SAFETY RULES FOR SABRE SAWS cont.

- 6. NAKE SURE the blade is not contacting the workpiece before the switch
- 7 HOLD TOOL by Insulated gripping surfaces (handles) when performing an operation where the cutting tool may contact hidden wiring or its own cont. Contact with a "live" wire wi make the exposed metal parts of the tool "live" and shock the operator.
- SECLIRE MATERIAL before cutting. Never hold a workplece in your hand or across your legs. Small or thin material may flex or vibrate with the blade, causing loss of control.
- When ripping, ALWAYS USE a rip fence or straight edge guide. This improves the accuracy of the cut and reduces the chance of the blade binding.
- NEVER cut more than one piece at a time. DO NOT STACK more than one workpiece on the worktable at a time.
- 11 AVOID awkward operations and hand positions where a sudden slip could cause your hand to move into the blade.
- 12. NEVER reach into the cutting path of the blade...
- 12. REVEN Feath into the Cultury parts of the base.
 13. BLADE GUIDE ROLLERS must support the blade when cutting. The reliers must rest against the back edge of blade. THE ONLY cutting operation when reflers DO NOT support the blade is the scrolling mode. WHEN SCROLLING the blade must evivel as it is guided to follow scrol patterns. ALWAYS move the base back and blade guide up and back away from blade in scrolling mode.

AWARINING: Use of this tool can generate dust containing chemicals known to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- nements are:

 *Lead from lead-based paints.

 *Crystalline is liea from bricks and coment and other masonry products.

 *Ansenic and chromium, from chemically broated lumber.

Your risk from these exposures varies, depending upon how often you do this type of work. To reduce your exposure to these chemicals:

type of work. To reduce your exposure to these chemicals:

- Work in a wel-verifiated area.

- Work with approved safety equipment, such as those dust masks that are specially designed to filter out interescopic particles.

Avoid prolonged contact with dust from power sanding, sawing, grinding, drilling and other construction activities. Wear protective dothing and wash exposed areas with seap and water.

A towing dust to get into your mouth, eyes, or key on the skin may promote absorption of harmful chemicals.

WARNING: Use of this tool can generate antifor disburse dust, which may sause serious and permanent respiratory or other Injury. Always use NIOSH/OSHA approved respiratory protection appropriate for the dust exposure. Direct particles away from face and body.

ADDITIONAL RULES FOR SAFE OPERATION

⚠ WARNING: BE SURE to road and understand all instructions. Fallure to follow all instructions listed below may result in electric shock, fire and/or serious personal injury.

- 1 Know your power tool. Read operator's manual carefully. Learn the applications and limitations, as well as the specific potential hazards related to this tool. Following this rule will reduce the risk of electric shock fire or serious injury.
- ALWAYS wear safety glasses or eye shields when using this saw. Everyday
 cyeglasses have only impact-resistant lenses; they are NOT safety glasses.
- 3. PROTECT your lungs. Wear a tace mask or dust mask if the operation is dusty.
- PROTECT your hearing. Wear appropriate personal hearing protection during use.
 Under some conditions noise from this product may contribute to hearing loss.
- ALL VISTORS AND BYSTANDERS MUST wear the same safety equipment that the operator of the saw wears.
- INSPECT the tool cords periodically and if damaged have them repaired at your nearest Sears Service Center. BE AWARE of the cord location.
- 7. ALWAYS check the fool for damaged parts, Before further use of the loot, a guard or other part that is damaged should be carefully checked to datermine if will operate properly and perform its intended furction. Check for misalignment or binding of moving parts, breakage of parts, and any other condition that may affect the tools operation. A guard or other part that is damaged should be properly repaired or replaced at a Soars Service Center.
- AL INSPECT and remove all nails from lumber before cawing.
- SAVETHESE INSTRUCTIONS. Refer to them frequently and use them to instruct others who may use this tool. If someone horrows this tool, make sure they have these instructions also.

GLDSSARY OFTERMS FOR WOODWORKING

Saw Blade Path

The area over, under, behind or in front of the blade, as it applies to the workpiece. That area which will be or has been cut by the blade.

Set The distance that the sew blade tooth is bent (or set) outward from the face of the blade.

Strokes per Rinute or Stroke Speed. The blade speed of a sabre saw, which can be varied, usually from 0 to 3000 strokes per minute.

. Cross cut

A cutting or shaping operation made against the grain of the work piece.

Bevel Cut. A cutting operation made with the blade at any angle other than 90° to the base.

GLOSSARY OF TERMS FOR WOODWORKING cont.

Ripping or Rip Cut
A cutting operation along the length of the workploce.

Prechand Cut
Performing a cut without using a tence, miler gauge, fixture, work clamp, or other
proper device to keep the workplace from twisting or moving during the cut.

Orbital Sawing In addition to the up and down movement of a cabra saw's blade, there is orbital action which thrusts the blade forward on the cutling stroke and greatly increases the cutling speed over conventional sabro saws.

Scrotting Allows the blade to swivel for intricate pattern cutting.

Through Sawing
Any cutting operation where the blade extends completely through the thickness of the workplace.

Kerf
The material removed by the blade in a through cut or the slot produced by the blade in a non-through or partial cut.

Workpiece or Material The item on which the cutting operation is being done. The surfaces of a workpiece are commonly referred to as faces, ends and edges.

Gum A slicky, sap-based residue from wood products.

Resin A sticky, sap-based substance that has hardened.

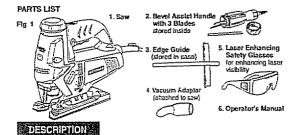

UNPACKING

MARNING: Your saw should NEVER be connected to the power source when you are assembling parts, making adjustments, trachling or removing blades, cleaning or when it is not in uso. Disconnecting the caw will prevent accidental starting, which could cause serious personal injury.

- 1. The Edge Guide is force-fitted into the top of the storage/carrying case.
- The Bevel Assist handle with 3 Blades stored inside is also force-fitted into the top of the case.
- 3. The Vac Adapter is attached to the saw.
- Also included and attached to the top of the lid of the case with a hock and loop strap is a pair of Lacer Embancing Safety Glasses which are used to enhance the laser beam in bright light conditions.
- 5. Carefully lift the saw out of the case and place on a stable flat surface.
- Support the saw carefully to make sure that optional real surface.
 Inspect the saw carefully to make sure that no broadapp or diamage has occurred during stipping. If any of the items mentioned are missing (refer to illustration on page 12) return the saw to your nearest Sears store or Craftsman outet to have the saw replaced.

UNPACKING cont.

AWARNING: If any parts are broken or missing, DO NOT attempt to, plup in the power cord or operate saw until the broken or missing parts are replaced. Fallure to do so could result in possible serious injury.

KNOW YOUR SABRE SAW (Fig. 2)

NOTE: Before attempting to use your saw, familiarize yourself with all of the operating features and safety requirements.

Your sabre saw has a precision built electric motor and it should only be connected to a 120-volt, 50-Hz AC ONLY power supply (normal household current). DO NOT operate on direct current (DC). This large voltage drop will cause a loss of power and the motor will overheat. If the saw does not operate when plugged into a correct 120-volt, 60-Hz AC ONLY outlot, check the power supply. This saw has an 8-ft. 2-wire power cord (no adapter needed).

This Sabre Saw has the following features:

- 1 5.5 Amp. 800 to 3000 SPM (strokes per minute) variable speed motor.
- 2. Laser Trace. The unique, innovative feature for accurate, efficient cuttings
- Variable Speed is controlled by the speed dial located on the top front of the higger switch handle.
- Scrolling/Orbital Action The control lever regulates the 5 cutting modes of the saw.
 SCROLLING 36th blade rotation using scrolling knob,
 normal up and down blade motion. NO orbital action.

 - SMOOTH minimal splintering normal up and down blade motion ND orbital action.
 - LOW for cutting most metals low orbital action.
 MEDIUM for cutting plactics, hardboard, medium orbital action.
 - 5. FAST for maximum orbital action, use for last cutting in plywood, softwoods.
- Blade Guide Support Rollers provides added blade control. ¹⁵/1s-inch blade stroke for faster cutting.

DESCRIPTION cont.

This Sabre Saw has the following features cont.:

- This Sabre Saw has the following features conf.:

 5. Durable Base glides smoothly over workpiece. Bevel scale for easy adjustments.

 6. Bevel Cutting Capacity P* to 45* left and right.

 7. Bevel Assist Handle use for maximum control when bevel cutting. Allaches on either side of the gaw. Stores under the saw or in case. Conveniently holds extra blades. 2 wood and 1 metal cutting blade included, Also has built-in hex key tip to adjust base for scroll cutting and bevel cutting.

 8. Oulck blade changes with no bools.

 9. LED Westblade Changes with no bools.

- LED Worklight i luminates cutling area.
 "Live Tool indicator" LED Eght is green when saw is plugged into power source.
- 11 Soft-grip ergonomically designed handle for maximum control, balance
 12. Extended length trigger switch with power lock-on button.
 13. Clear Front Chip Shield /Blade Guard.

- 14 2-way sawdust removal: 1. Blower position blows debris away from cutting line.
 2. Vacuum position for hook-up to wel/dry vac, sold separately.
 15. Includes edge guide, idoal for tast, straight repetitive cutting.
- 16. Permanently lubricated 100% ball bearings for smooth operation, long life.
- Durable machined geating for longer, lasting power transmission.
 Burable cast aluminum and high-impact resistant housing and handle protect tool from damage.
- Includes Impact resistant case for easy carrying and storage.

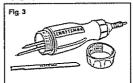

DESCRIPTION cont.

Rating	5.5 Amps	
Laser Diode Type	Red Laser Diode 635-665nm	
Laser class	Class Ilia, power output ≤ 2.5mW	
No Load Speed	800-3000 SPM (strokes per minute)	
Input	120-volts, 60-Hz AC	
Bevel Cutting Angle Range	D° to 45° left and right	
Blade Siroke	13/se-inch	
Cutting Depth in Wood	3 ⁹ /e-in. (85mm)	
Cutting Depth in Steel	Vin. (5mm)	

ASSEMBLY

Blade Storage in The Bevel Assist Handle (Fig. 3)

Blade Storage in The Bevel Assist Ha-Your sabin naw comes with 1 motal cutting and 2 wood cutting blades. The blades are stared in the Bevel Assist Handle under the cap. Unscrew the cap on the handle and locate the blade storage with 3 blades. Bemember to always use the proper blade for the material being cut. Always make sare the cap is on securely before using the handle on the saw, when bevel cutting, or when staring the handle on the saw while operating it.

TOOL-LESS BLADE INSTALLATION (Figs. 4, 5 and 6)

Tool-less blade change allows you to remove and replace the saw blade quickly and easily without the use of additional tools.

1 Unplug the saw.

AWARNING: ALWAYS unplug saw from the power source before changing blades or making any adjustments. Fallure to unplug the saw could result in accidental starting which can cause serious personal injury.

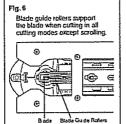

NOTE: When installing or removing the cutting blade from the saw, always have the scralling/arbit control lever in the SMIOOTH position. If you have the lever in the SCROLLING position, the blade holder assembly will keep turning and you won't be able to insert or remove the blade.

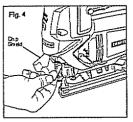

- Raise up the clear chip shield, lift one side out of its mounting slot, and remove the shield from the saw (see Fig. 4). Apply a little force when litting and removing the shield from the saw.
- 3. Turn the caw upside down so you have access to the blade holder assembly.

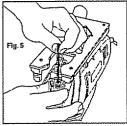

ASSEMBLY cont

TOOL-LESS BLADE INSTALLATION cont. (Figs. 4, 5 and 6)

- A Rolate fired cover on the biade holder assembly counterclockwise should a quarter turn and hold it in this position while inserting a blade into the stat of the blade holder (see Fig. 5). The teeth of the blade holder (see Fig. 5). The teeth of the blade holder (see Fig. 5). The teeth of the blade holder (see Fig. 5) and point up (when saw is right side up, in cutting position), and the back of the blade must reak in the groove of the blade guide rollers (see Fig. 6).
- Release the blade holder to lock the blade in place.
- biase in place.
 Pull down on the blade to make sure the blade is securely locked in place.
 Attach the clear chip shield into its mounting slots and anap the shield down to its proper position.

NOTE: For use with both "T" and "U" shanked blades.

⚠ CAUTION Once the blade is installed in the saw, it is always exposed. Them is no lower blade guard. Use caution when handling the saw so that the blade does not catch clothing, skin, etc. Each time you set the saw down take care not to bend the blade. Always set saw down on its side when blade is installed. ALWAYS remove blade when saw is not being used.

ASSEMBLY/confi.

REMOVING THE BLADE

1 Unplug the saw.

⚠ WARNING: ALWAYS unplug saw from the power source before changing blades or making any adjustments. Fallure to unplug the saw could result in accidental starting which can cause serious personal injury.

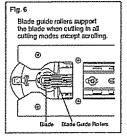

- 2. Follow steps 1 through 4 on the too-less blade installation (see pages 14 and 15).
- 3. Carefully remove the blade (or change the blade).
- 4. Realtach the clear chip shield and snap it down to its proper position.

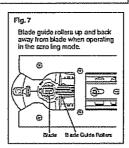

NOTE: When storing your saw, ALWAYS remove the cutting blade.

Fig. 6 and 7

⚠ CAUTION: The blade guide rollers support the blade when cutting. The blade guide rollers must rest against the back edge of the blade. THE ONLY cutting operation where the blade guide rollers do not support the blade is when the saw is in the scrolling mode.

When scrolling, the blade must swivel as it is guided to follow the scroll pattern. ALWAYS move the base back and blade guide rollers up and back away from the blade when operating in the scrolling mode.

OPERATION 🦸

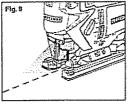

USING THE LASER TRAC™ LIGHT FEATURE (Fig. 8)

MARNING: LASER LIGHT. LASER RADIATION, Avoid Direct Eye Exposure. BO NOT stare into beam, Only turn laser beam on when the saw is on the workplece. Class illa laser.

Fig. 8

- The laser enhancing safety glasses that were included will enhance the laser light in bright light conditions. DO NOT wear these glasses if they interfere with the safe operation of this saw.
- 2 DO NOT turn the laser beam on until the saw is on the workpiece.
- 3. Mark the line of cut on the workplece.
- 4. Adjust the cutting angle and cutting speed as needed.
- 5. Plug in the saw and push in the lazer switch to turn on the lazer
- 6. Align laser beam with line-of-cut (see Fig. 9).
- 7 Squeeze the trigger switch and slowly push the saw ferward. Keep the red laser beam on the line-of-cart.
- 8. Always shut off the taser light when you are finished cutting.

LED WORKLIGHT AND "LIVE TOOL INDICATOR" LED LIGHT (Fig. 9)

LED WORKLIGHT

Your salve saw has an LED work ight that turns "ON" automatically when the saw is plugged into a power source. The light helps provide easy visibility of the cutting line.

"LIVE TOOL INDICATOR" LED LIGHT (Fig. 10)

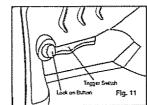

Your saw has a Tuke Tool inflictator green LED light that turns "ON" automatically when the saw is plugged into a power source. The light is located on both sides of the base of the trigger switch handle near the body of the saw.

POWER ON-OFF TRIGGER SWITCH and POWER "LOCK-ON" BUTTON (Fig. 11)

- 1 Connect the plag of your saw to a standard household power outlet.
 2 Start the tool by squeezing the on/off trigger switch (see Fig. 11).
 3. To stop the tool, release the on/off trigger switch.

 1 Short the one off trigger switch in
- Irigger switch.
 4 To lock the cavott trigger switch in the "on" position, press trigger switch and white holding it "on", press in the lock-no butten, located on the tell side of the handle (see Fig. 11).
 5. The power lock-on butten allows the operator to keep the sabre saw running without capuezing the trigger switch. This is useful for continuous sawing applications.
 6. To release the power lock-on butten.
- aswing appreciators.

 6. To release the power lock-on button, press and release the trigger switch. This will turn the tool off.

 $\underline{\Lambda}$ WARNING: If the lock-on button is continuously being depressed, the trigger switch cannot be released.

ADJUSTING THE CUTTING SPEED WITH THE VARIABLE SPEED DIAL (Fig. 12 and 12a)

The variable speed feature of this saw allows you to match the proper cutting speed to the material being cut, enhancing the overall performance of your saw and helping to save the blades from undue wear.

The speeds can be adjusted from 800 to 3000 SPM (strokes per minute) no-load speed, by adjusting the variable speed dial located on top of the trigger switch handle.

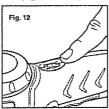

The speed dial is numbered "1" through "6", with number "1" the slowest speed and number "6" the fastest speed (see Fig. 12 and 12a).

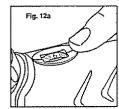

The proper blade speed will differ depending on the type and thickness of the workpiece and whether you are straight culting or following an intricate scroll pattern.

As a general rule, slower speeds are for denser materials and taster speeds are for soft materials. High speeds will allow you to cut workpieces faster, but blade life will be reduced.

The following chart can help you pick the proper speed. Remember to ALWAYS use the proper cutting blade for the cutting application and the material you are cutting.

ADJUSTING THE CUTTING SPEED WITH THE VARIABLE SPEED DIAL conf. (Fig. 12 and 12a)

Workplece to be cut	Number on Variable Speed Dial
Wood	5-6
Mild steel	3-6
Stainless steel	3-4
Aluminum	3-6
Plastics	1-4

SCROLLING AND ORBITLAL ACTION (Fig. 13)

The scrolling/orbital action control lever regulates the 5 cutting modes of the saw (see Fig. 13). The first 2 modes, ECROLLING AND SMOOTH, produce the normal up and down blade action of a sabre sow.

action of a sabre sow.

The next 3 modes, LOW, MEDIUM AND FAST, produce the critical blade action. The orbital blade action thrusts the blade forward on the cruting stroke (see Fig. 14), and greatly increases the criting speed over the normal up and down blade action.

The SCROLLING and SMOOTH settings with the up and down blade action and the LOW setting with the least aggressive orbital action are the ideal modes for cruting harder materials. To increase the orbital action, turn the control lever to MEDIUM or LOW. The orbital action modes will not crutine the profile that the critical setting the median through the control lever to MEDIUM or LOW. The orbital action modes will not crutine tracked cuts, but will cut laster. When minimal splintering is needed, the SMOOTH setting position should be used for the normal up and down blade motion with NO orbital action.

ALWAYS test the cutting modes on a piece of scrap material before making your faished outs-

NOTE: Select the right blade for your cutting application. Blades are available for seroll cutting, fine woodcutting, medium and tast woodcutting, and tast metal or smooth metal cutting. A general guide to use when selecting a blade is, the more teeth per inch on the blade, the smoother the cuts, and the less teeth per inch on the blade the faster and rougher the cuts.

See page 29: ACCESSORIES, for more information on selecting the right blade for the job-

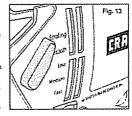

SCROLLING AND ORBITAL ACTION cont (Fig. 13)

- SCHOLLING ARID CHRITICAL ACTION (SIGNATURE)

 SCROLLING -This mode allows 360° blade rotation using the excelling knob. In this mode there is no orbital action. Use with excell blade to cut intricate scroll patients in all materials with normal up and down blade.
- motion.

 2. SMOOTH This mode is Ideal for cutting all materials with normal up and down blutte motion with minimal splintering. In this mode there is no orbital action. Use this mode for cutting hardwoods, mild steel, soft and hard materials with fine wood cutting and amooth metal cutting blades.

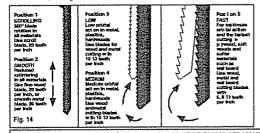

- MEDIUM Use this mode for cutting most motal, plastics and hardwoods with a more aggressive orbital action than the LOW mode.
 FAST For maximum orbital action and the tastest cutting in plywood, soft woods and softer materials.

Choose the SCROLLING or SMOOTH settings with the smalling/orbital control lever for normal up and down blade motion. (See Fig. 14. Positions 1 and 2).

Choose the LOW or MEDIUM settings for the least aggressive orbital blade actions (See Fig. 14. Positions 3 and 4).

Choose the FAST solling for the fastest most aggressive culting with maximum orbital blade action (See Fig. 14, Position 5).

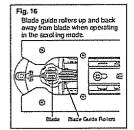

NOTE: in order to reach toll orbital action, the blade MUST BE FACING STRAIGHT FORWARD and the back of the blade must rest in the groups of the guide rollers. The base must be all the way in the followed positions, orbital action is not observable when the saw is re-running. The caw must be cutting for orbital action to occur. The speed of cut is easier to see in thicker materials.

ADJUSTING / MOVING THE BASE AND BLADE GUIDE ROLLERS FOR SCROLLING (Fig. 15, 16 and 17)

NOTE: The blade guide rollers must support the blade in all cutting operations of the saw except when scrolling. When acrofling, the blade should rotate freely (swivel) and should not some into contact with the blade guide rollers in the scrolling mode always move the base and back and the blade guide rollers up and away from the blade. The blade is released to swivel in the SCROLLING position and if the blade is held with the guide rollers it could bend and break.

Fig. 15 Elade guide rollers support the blade when cutting in all cutting modes except scrolling. ➂ e 0

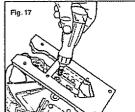

Binde Blade Guide Rullers

1. Unplug the saw.

⚠ WARNING: ALWAYS unplug caw from the power source BEFORE making any adjustments or attaching accessories.

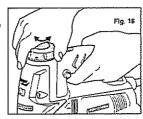

- 2. Move the Scrolling/Orbit control lever to "Scrolling" position.
- 3. Remove the blade, (see page 16).
- 3. Homove the blade, (see page 16).
 Use the bevel assist handle's built in hex key lip to loosen the hex screw in the base of the saw (see Fig. 17).
 5. With the base to essence, push the base back as far as it will go, then push up and back on the blade guide rollors so they move away from the blade position in the blade holder (see Fig. 16).
 Be distinct the back carrier to the hare.
- 6. Re-tighten the hex screw in the base.
- 7 Install the blade, (see Page 15).
- Make sure the blade guide rollers are away from the blade (See Fig. 16).

SCROLLING CONTROL KNOB FEATURE (Fig. 18)

The scrolling feature allows the blade to be rotated 350°. It is ideal for culting curves designs and detailed pattern work.

- To engage the scrolling function, move the Orbit/Scrolling Control Lover to the SCROLLING position.
- Grasp the scrolling control knob (see Fig. 18).
- The scrolling control knob can be related 360° to the test or right white guiding the saw to follow intricate cutting lines.

NOTE: The blade can be locked in any scralling position within 360° by switching the Orbit/Scrolling Control Lever to the "SMOOTH" position.

NOTE: After moving the lever late the scrolling position, turn the scrolling knob back and torth to be sure the blade plunger assembly is locked into the desired position.

IMPORTANT: When you are manually scroll cutting, ALWAYS hold the saw handle is one hand and rotate the scrolling knob with your other hand, while applying pressure to the front of the saw so it does not jump out of the workpiece.

NOTE: When scroll cutting intricate designs. ALWAYS use a scroll cutting blade

A CAUTION: Excessive side pressure to the blade sould break the blade, which could damage the material being cut.

2-WAY SAWDUST REMOVAL (Fig. 18)

2-WAT SAWOUS! REMOVED (FIg. 16)

Your sabre saw is equipped with 2-way sawdust removal system. Push the vacuum blower tools to blow debris away from the cutting area, or attach the vac adapter tube (see Fig. 18) to a worldey vac hose with a 17-hinch adapter, all sold separately. The vac adapter two will attach to either side of the base to accommodate bevel cutting or blowing the debris away from the operator.

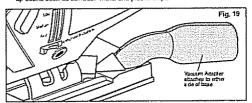

1. Unplug the saw.

⚠ WARNING: ALWAYS unplug saw from the power source BEFORE making any adjustments or attacking accessories.

A WARNING: ALWAYS clamp and support workplece securely, ALWAYS maintain proper control of saw. Fallure to clamp and support workplece and loss of control of saw could result in serious injury.

2-WAY SAWDUST REMOVAL cont. (Fig. 19)

- Switch the vacuum/blower knob to the "BLOWER" position to blow the sawdust, motal and plastic chips away from the cutting area. No wel/dry vac is needed for this position.
- Switch the vacuum / blower switch (see Fig. 19) to the "VACUUM" position. Connect the saw's vacuum adapter to a Craftsman" welfdry vac (sold separately) to vacuum up debris such as sawdust, metal and plastic chips.

GENERAL CUTTING TIPS

- Always place the best or "linished" side of your workpiece "lace down" so it does not get scraped or abused white sawing. ALWAYS CLAMP workpiece securely before sawing.
- 2. Draw your cutting lines, patterns or designs on the "backside" facing you. This means they would be reversed or backwards from the way they will appear on the "finished" side.
- 3. Always select the correct blade for your cutting application.
- 4 Place front edge of saw base on the material to be cut and line up the blade with your cutting line.
- 5. Hold saw firmly and turn it on.
- Press down (to keep saw base flat against the workpiece) as you slowly push the saw in the direction of the cut.
- Gradually build up the blade opend, cutting as close to the line as possible (unless you want to leave enough room for finished sanding).
 As you cut, you may need to reposition the vise or clamps to keep the workpiece stable.
- BO NOT force the saw because the blade teeth may rub and wear without cutting-which may result in breaking the blade.
- 10. Let the saw do most of the work.
- 11 ALWAYS cut slowly when following curves, so the blade can cut through cross grain. This will provide an accurate cut and will prevent the blade from wandering.

NOTE: ALWAYS apply a steady firm "DOWN" pressure on the front and body of the saw as you cut. This will keep the saw blade from JUMPING out of the workpiece.

A WARNING: ALWAYS clamp and support workplece securely. ALWAYS maintain proper control of saw. Failure to clamp and support workplece and loss of control of saw could result in serious injury.

CUTTING METAL

When cutting mital ALWAYS damp down the metal workpiece and ALWAYS use a METAL cutting blade. Be extremely careful to move the saw very slowly as you cut. Use the LOW speeds (Position 1, 2 or 3 on the variable speed dial). Also use the "LOW" position on the orbital control lover, DO NOT twist, bend or force the blade. If the saw jumps or bounces as you cut change to a blade with finer teeth. If the blade begins to clog when cutting soft metal, change to a blade with coarser leeth.

For easier cutting, litericate the blade with a slick of cutting war (if available) or cutting oil when cutting steel. Thin metal aboutd be contivided between two pieces of wood or tightly clamped on a single piece of wood (wood on top of the metal). Draw the cut lines or design on the top piece of wood.

When cutting attribute extrusion or angle from clamp the work in a bench vise and saw close to the vise jaws.

When sawing tubing with a diameter larger than the blade is deep, cut through the wall of the tubing and then insert the blade into the cut rotating the tube as you saw.

1. When cutting metals, a suitable cooling / cutting oil must be used.

 \triangle WARNING: ALWAYS unplug saw from the power source BEFORE oiling the blade or making any adjustments or attaching accessories.

Spread the oil onto the blade or workpiece at regular intervals during cutting in order to reduce wear or overheating of the blade.

⚠ WARNING: ALWAYS clamp and support workpiece securely. ALWAYS maintain proper control of saw. Fallure to clamp and support workpiece and loss of control of saw could result in sectious injury.

CUTTING WITH A STRAIGHTEDGE (Fig. 20)

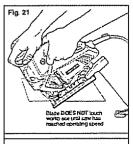

- Mark the side edge of the saw base and then clomp the straightedge on the mark and parallel to the cut.
- As you cut, keep the saw base edge flush against the straightedge and flat on the workpiece.

PLUNGE CUTTING (Fig. 21)

One of the most useful features of this type of tool is the ability to start a cut anywhere on the workpiece surface - without the need of drilling a starting hele. Plungo cutting is useful and time saving for making rough openings in soft materials. It makes it unnecessary to drill a hole for an inside or pocket cut.

- 1. Draw lines for the opening you want to cut. Fig. 21
- Hold saw firmly and till it forward so only the too of the saw base rests on the workpiece.
- MAKE SURE that the blade is well clear of the workpiece.
- Start the saw and linen gradually lower the blade into the workpiece, firmly holding the too of the saw base to prevent side wobble.
- 5. Stowly pivol the saw downward like a hinge until the blade cuts through and the base rests list on the workpiece.
- 6. Begin sawing in the usual manner along the cut line.

NOTE: DO NOT use a scroll blade for plunge cutting.

IMPORTANT: DO NOT try to plunge cut into hard materials, such as hardwoods like oak or maple, or metals such as steel.

TO MAKE SHARP CORNERS

- 1 Cut up to the corner, then back up slightly before rounding the corner.
- 2. After the opening is complete, go back to each corner and cut from the opposite direction to square it off.

TO ADJUST BASE PLATE FOR BEVEL CUTTING (Fig. 22)

⚠ WARNING: ALWAYS unplug saw from the power source BEFORE making any adjustments or attaching accessories.

⚠ CAUTION: To prevent damage to the tool when angle or bevel cutling, the scroll mechanism MUST BE locked in place with the cutting edge of the blade facing the front of the tool.

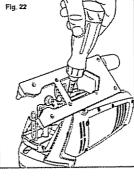

TO ADJUST BASE PLATE FOR BEVEL CUTTING cont. (Fig. 22)

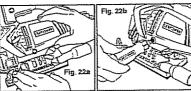

NOTE: ALWAYS remove the blade before adjusting the cutting angle.

- To adjust the cutting angle, first turn the tool upside down and remove the borel essist handle from undermath the saw.
- 2. Use the hox key built into the end of the bevel assist handle to locate the hox screw under the base of the saw (see Fig. 22).

 Mouse the base of the saw
- Move the base of the saw slightly toward and till it to the desired angle between 0° and 45°, using the scale marked on the base bracket. (see Fig. 22a)
- 4 Install a cutting blade.
- S Slide the blade guide essembly until the blade guide tests against the back edge of the blade.
- eoge of the balan.

 6. Re-dighten the hex screw For accurate work, it is necessary to make a trait out measure the work, and reset the angle until the correct setting is achieved.

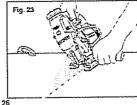

A WARNING: ALWAYS clamp and support workpiece securely. ALWAYS maintain proper control of saw. Failure to clamp and support workpiece and loss of control of saw could result in serious injury.

BEVEL ASSIST HANDLE INSTALLATION AND USE (Fig. 23)

The bovel assist handle will provide maximum control when making bovel cuts.

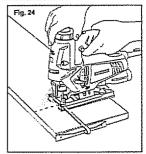

The bevel assist handle can be attached to either side of the saw, Position the handle on the side of the saw that faces up and away from the workplace. (see Fig. 22b and 23)

USING EDGE GUIDE (Fig. 24)

MARNING: ALWAYS unplug saw from the power source BEFORE making any adjustments or attaching accessories.

- 1 Insert the bar of the edge guide through the slots in the base of the sabre saw (see Fig. 24). The edge guide can be inserted from either side of the base, with the guide edge facing down.
- Screw the edge guide locking knob into the threaded hole in the base to lighten the edge guide bar in place.
- Neasure the distance from the edge of the workplece to the line of cut. Side the edge guide to init desired distance and lighten the locking knot to secure edge guide in place.

MAINTENANCE

MARNING: Preventive maintenance performed by unauthorized personnol may result in misplacing of internal wires and components, which could cause a scrious hazard.

SERVICE

- When servicing a tool, use only identical replacement parts. Use of unauthorized parts or failure to follow maintenance instructions may create a risk of electrical shock or serious personal injury.
- personal injury.

 2. All service that requires opening the salare saw MUST ONLY be performed by a Sears Service Center. At motor parts represent an important part of the double insulation system and MUST ONLY he serviced by a Sears Service Center. Service performed by unqualified personnel could result in a risk of injury.

 3. Avoid using solvents when cleaning plastic parts. Most plastics are susceptible to damage from various types of commercial servents and may be damaged by their use. Use clean cloths to remove dirt, carbon dust, etc.

MAINTENANCE cont.

GENERAL

MARNING: ALWAYS disconnect the tool from the power source BEFORE cleaning or performing any maintenance.

⚠ WARNING: DO NOT at any time let brake fluids, gasoline, potroleum-based products, penetrating oils, etc. come in contact with plastic parts. Chemicats can damage, weaken or destroy plastic, which may result in serious personal injury.

It has been found that electric tools are subject to accelerated wear and possible premature in turn when they are used to work on fiber plans boats and sports cars, wallboard, spacking compounds or plader. The chips and prindings from these materials are highly abraive to electrical tool parts, such as bearings, brushes, communisters, etc. Consequently, it is not recommended that this tool be used for extended work on any fiber place material, wallboard, spacking compound or plaster. During any use on these materials, it is extremely important that the loot is cleaned frequently by blowing with an air jet.

A WARNING: Always wear safety goggles or safety glasses with cide chiefds during power tool operations, or when blowing dust if operation is dusty, also wear a dust mask.

LUBRICATION

All of the bearings in this tool are tubricated with a sufficient amount of high-grade lubricant for the life of the tool under normal operating conditions. Therefore, no turther tubrication is required.

TROUBLESHOOTING

PROBLEM	CAUSE	SOLUTION
Laser line is not projected	Laser switch is turned off and/or the lool is not plugged in.	Make sure laser switch is turned on and the tool is plugged in.
Laser line is hard to see	Working conditions are too bright.	Use linted laser enhancing safety glasses
LED Worklight and "Uve Tool Indicator" LED light do not light	The loof isn't plugged in	Plug tod into power source
The Scrolling Control Knob cannol be turned	The Orbit/Scrolling Control Lover is not in "scrol ing" position.	Put the lever into "ecrolling" position.

ACCESSORIES

MARNING: The use of attachments or accessories that are not recommended for this lool might be dangerous and could result in certous injury.

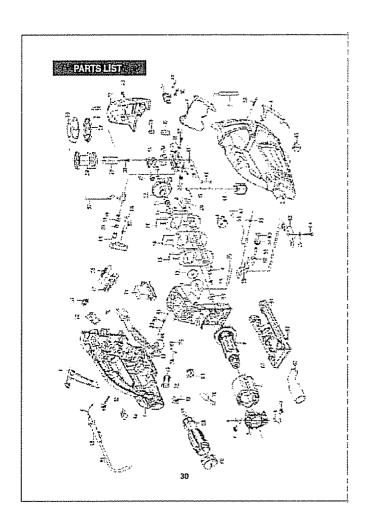

Source and other Craftsman outlets have a large selection of Craftsman salare saw bindes designed for specific cutting applications.

Sabre saw blades are available for super fine wood scrolling, smooth, medium and fast wood cutting. Select metal cutting blades for fast or for smooth cutting, knife blades designed to cut vinyf, leather, nabber, cark an

There are special blades available for cutting abrasho materials such as plaster and wallboard and most all blades are available in individual packs or variety and assorted sets.

Sears and other Craftsman outlets also offer safety equipment, sawhorses, work stands, straight edges, cuttling guides and a large selection of clamps to help you with a I your sawing needs.

Visit your local Sears store or other Craftsman outlets or shop www.craftsman.com

PARTS LIST GORL 5.5 AMP SCROLLING SABRE SAW - MODEL NUMBER 320.17256

The Model Number will be found on the Nameplate.
Always mention the Model Number in all correspondence regarding your tool.
