Congratulations on your purchase of a new refrigerator! We here at Sears are very proud of our product and we are completely committed to providing you with the best service possible. Your satisfaction is our #1 priority.

We know you'll enjoy your new refrigerator and Thank You for choosing our product. We hope you consider us for future purchases.

PLEASE READ AND SAVE THESE INSTRUCTIONS

This Owner’s Guide provides specific operating instructions for your model. Use your refrigerator only as instructed in this manual. These instructions are not meant to cover every possible condition and situation that may occur. Common sense and caution must be practiced when installing, operating and maintaining any appliance.

Please record your model and serial numbers below for future reference. This information is found on the serial plate located inside the refrigerator compartment.

Model Number: 253 or 970

Serial Number: ____________________________

Purchase Date: ___________________________

FOR YOUR SAFETY

- Do not store or use gasoline, or other flammable liquids in the vicinity of this or any other appliance. Read product labels for warnings regarding flammability and other hazards.
- Do not operate the refrigerator in the presence of explosive fumes.
- Avoid contact with any moving parts of automatic ice maker.
- Remove all staples from the carton. Staples can cause severe cuts, and also destroy finishes if they come in contact with other appliances or furniture.

CHILD SAFETY

Destroy or recycle the carton, plastic bags, and any exterior wrapping material immediately after the refrigerator is unpacked. Children should NEVER use these items to play. Cartons covered with rugs, bedspreads, plastic sheets or stretch wrap may become airtight chambers, and can quickly cause suffocation.

PROPER DISPOSAL OF YOUR REFRIGERATOR OR FREEZER

Risk of child entrapment

Child entrapment and suffocation are not problems of the past. Junked or abandoned refrigerators or freezers are still dangerous – even if they will sit for “just a few days.” If you are getting rid of your old refrigerator or freezer, please follow the instructions below to help prevent accidents.

Before you throw away your old refrigerator/freezer:

- Remove doors.
- Leave shelves in place so children may not easily climb inside.
- Have refrigerant removed by a qualified service technician.
ELECTRICAL INFORMATION

- The refrigerator must be plugged into its own dedicated 115 Volt, 60 Hz., AC only electric outlet. The power cord of the appliance is equipped with a three-prong grounding plug for your protection against electrical shock hazards. It must be plugged directly into a properly grounded three-prong receptacle. The receptacle must be installed in accordance with local codes and ordinances. Consult a qualified electrician. Do not use an extension cord or adapter plug.
- Immediately repair or replace any power cord that becomes frayed or damaged.
- Never unplug the refrigerator by pulling on the power cord. Always grip the plug firmly, and pull straight out from the receptacle to prevent damaging the power cord.
- Unplug the refrigerator before cleaning and before replacing a light bulb to avoid electrical shock.
- Performance may be affected if the voltage varies by 10% or more. Operating the refrigerator with insufficient power can damage the compressor. Such damage is not covered under your warranty.
- Do not plug the unit into an outlet controlled by a wall switch or pull cord to prevent the refrigerator from being turned off accidentally.
- Avoid connecting refrigerator to a Ground Fault Interruptor (GFI) circuit.

**NOTE:** Turning the freezer temperature control to “0” turns off the compressor, but does not disconnect electrical power to the light bulb or other electrical components.

FULL ONE-YEAR WARRANTY ON REFRIGERATOR

For one year from the date of purchase, when this refrigerator is operated and maintained according to the instructions provided in this Owner’s Guide, Sears will repair this refrigerator, free of charge, if defective in material or workmanship.

FULL FIVE-YEAR WARRANTY ON SEALED REFRIGERATION SYSTEM

For five years from the date of purchase, when this refrigerator is operated and maintained according to the instructions provided in this Owner’s Guide, Sears will repair the sealed system (consisting of refrigerant, connecting tube, and compressor motor), free of charge, if defective in material or workmanship.

The above refrigerator warranty applies only to refrigerators which are used for storage of food for private household purposes.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

Warranty service is available by contacting the NEAREST SEARS SERVICE CENTER/DEPARTMENT in the United States. See the back page of this manual.

For warranty questions, please contact the following address:

Sears, Roebuck and Co.
Dept. 817WA
Hoffman Estates, IL 60179
Sears Canada Inc., warrants every new Kenmore refrigerator to be free from defects in material or workmanship. What Sears will do, free of charge, in case of defect:

**Normal Responsibility of the Customer**

The following items, since they are not manufacturing defects, are not included in the warranty, but are the responsibility of the customer:

1) Damage to finish after delivery.
2) Improper power supply, low voltage, or any defects in the house wiring system or appliance not connected to electric outlet.
3) Replacement of light bulbs.
4) Damage caused by moving the product from its original installation.
5) Service required as a result of alteration, abuse, fire, floods, or acts of God.
6) Providing adequate air circulation to the refrigerating system.
7) Proper use and care of product as listed in the customer's manual; proper setting of the controls.

If any service is required under this warranty, simply call 1-800-4-MY-HOME™ (1-800-469-4663).

This warranty is in addition to any statutory warranty. The above warranty covers Kenmore Refrigerators sold and operated in Canada only and shall not apply if the refrigerator is used for other than domestic purposes.

**Sears Maintenance Agreement**

Maintain the value of your Kenmore refrigerator with a Sears Maintenance Agreement.

SEARS CANADA INC. • Toronto, Canada • M5B 2B8

PRINTED IN U.S.A.
This Use & Care Manual provides specific operating instructions for your model. Use the refrigerator only as instructed in this Use & Care Manual. Before starting the refrigerator, follow these important first steps.

LOCATION
- Choose a place that is near a grounded electrical outlet. **Do Not** use an extension cord or an adapter plug.
- If possible, place the refrigerator out of direct sunlight and away from the range, dishwasher or other heat sources.
- The refrigerator must be installed on a floor that is level and strong enough to support a fully loaded refrigerator.
- Consider water supply availability for models equipped with an automatic ice maker.

INSTALLATION
- **Do Not** install the refrigerator where the temperature will drop below 55°F (13°C) or rise above 110°F (43°C). At these temperature extremes, the compressor will not be able to maintain proper temperatures inside the refrigerator.

**CAUTION** Do Not block the toe grille on the lower front of your refrigerator. Sufficient air circulation is essential for the proper operation of your refrigerator.

Installation Clearances
- Allow the following clearances for ease of installation, proper air circulation, and plumbing and electrical connections:
  - Sides & Top 3/8”
  - Back 1”

**NOTE:** If you see black coils/tubing on the back of your refrigerator (air-cooled condenser) leave 3” clearance at top of refrigerator.

DOOR OPENING
- **NOTE:** If your refrigerator is placed with the door hinge side against a wall, you may have to allow additional space so the door can be opened wider.

Your refrigerator should be positioned to allow easy access to a counter when removing food. To make this possible, the direction in which the doors open can be reversed. See Door Removal & Reversal Instructions on page 7.
Before Installing the Water Supply Line, You Will Need

- Basic Tools: adjustable wrench, flat-blade screwdriver, and Phillips™ screwdriver
- Access to a household cold water line with water pressure between 20 and 120 psi.
- A water supply line made of ¼ inch (6.4 mm) OD, copper tubing or braided water line. To determine the length of copper tubing needed, you will need to measure the distance from the ice maker inlet valve at the back of the refrigerator to your cold water pipe. Then add approximately 7 feet (2.1 meters), so the refrigerator can be moved out for cleaning (as shown).
- A shutoff valve to connect the water supply line to your household water system. DO NOT use a self-piercing type shutoff valve.
- A compression nut and ferrule (sleeve) for connecting the water supply line to the ice maker inlet valve.

NOTE: A water line kit is available through Sears retail or catalog stores at additional cost.

To Connect Water Supply Line to Ice Maker Inlet Valve

1. Disconnect refrigerator from electric power source.
2. Place end of water supply line into sink or bucket. Turn ON water supply and flush supply line until water is clear. Turn OFF water supply at shut off valve.
3. Unscrew plastic cap from water valve inlet and discard cap.
4. Slide brass compression nut, then ferrule (sleeve) onto water supply line, as shown.
5. Push water supply line into water valve inlet as far as it will go (¼ inch). Slide ferrule (sleeve) into valve inlet and finger tighten compression nut onto valve. Tighten another half turn with a wrench; DO NOT over tighten.
6. With steel clamp and screw, secure water supply line to rear panel of refrigerator as shown.
7. Coil excess water supply line (about 2½ turns) behind refrigerator as shown and arrange coils so they do not vibrate or wear against any other surface.
8. Turn ON water supply at shutoff valve and tighten any connections that leak.
9. Reconnect refrigerator to electrical power source.
10. To turn ice maker on, lower wire signal arm (see ice maker front cover for ON/OFF position of arm).

IMPORTANT: It takes approximately 24 hours for the ice maker to begin producing ice. Air in new plumbing lines may cause ice maker to cycle two or three times before making a full tray of ice. New plumbing may cause ice to be discolored or have poor flavor. Discard ice made during the first 24 hours.
**Tools Necessary:**

- Phillips' head or Quadrex head screwdriver
- Wrench Set
- Cabinet Hole Plugs

**Door Removal and Reversal Instructions:**

1. Remove toe grille and top hinge cover.
2. Remove top hinge with 3/8” hex driver and lift freezer door off of center hinge pin. Set door aside.
3. Unscrew center hinge pin using adjustable wrench and save for reassembly. Ensure plastic washer stays on hinge pin.
4. Lift refrigerator door off of bottom hinge and set aside.
5. Remove center hinge and shim by removing inside screw and loosening two outside screws enough to allow hinge and shim to slide out. Tighten screws.
6. Loosen two outside screws on opposite side of refrigerator, remove inside screw and install center hinge.
7. Remove bottom hinge with 3/8” hex driver. Reinsert two outside screws in holes and tighten. Inside screw will go to opposite side in step 8.
8. Remove two outside screws on opposite side of refrigerator and install bottom hinge. Insert and tighten screw saved from step 7.
9. Unscrew bottom hinge pin using adjustable wrench. Move hinge pin to other hole in hinge and tighten with adjustable wrench.
10. Reverse door handles (see instructions on next page).
11. Move freezer and refrigerator door stops to opposite side. Before starting screws, use an awl to puncture the foam.
12. Position refrigerator door onto bottom hinge pin and screw center hinge pin through center hinge into top of door. Close refrigerator door to help align hinge hole.
13. Tighten center hinge pin with adjustable wrench.
14. Remove cabinet and hinge hole plugs and move to opposite side.
15. Lower freezer door onto center hinge pin.
16. Close freezer door. Have an assistant lift up on opposite side of door while tightening screws to install top hinge.
17. Replace toe grille and top hinge cover.
18. Plug in electrical power cord and turn refrigerator temperature control to center position. Adjust setting as necessary.

**NOTE:** The direction in which your refrigerator doors open (door swing) can be reversed, from left to right or right to left, by moving the door hinges from one side to the other. Reversing the door swing should be performed by a qualified person.

**IMPORTANT:** Before you begin, turn the refrigerator temperature control to “0” and remove the electrical power cord from the wall outlet. Remove any food from door shelves.
**Door Removal and Reversal Instructions (continued)**

**NOTE:** Some models have “pocket” handles, which are recessed into the sides of the door. On these models, only the hinges will need to be reversed.

**TO REMOVE FREEZER HANDLE:**
(Handles may be easier to reverse while doors are off.)
1. Remove two screws attaching handle to bottom of freezer door.
2. Swing bottom of handle away from the door and slide handle straight up and off of dovetail button.
3. Remove screw and dovetail button and install on other side, moving hole plugs from corresponding holes to opposite side.

**TO ATTACH FREEZER HANDLE:**
1. Start with handle offset away from door. Place top of handle over dovetail button, swing handle into an upright position and pull downward, locking it into place.
2. Secure bottom of handle with two screws removed earlier.

**TRIM REMOVAL (FULL-LENGTH TRIM MODELS ONLY)**
In some models, the refrigerator door has a full length trim piece which continues from the bottom of the handle to the bottom of the door. The top of the trim fits around the base of the handle. An adhesive “trim lock” is positioned about halfway down. The bottom of the trim is held in place by either an adhesive trim lock, or a trim lock with two prongs inserted into a hole on the face of the door.

**TO REMOVE TRIM:**
1. Remove trim by gently pulling trim lock areas out and away from door.
2. When trim is free from door, slide the trim straight down and away from base of handle.

**NOTE:** For models with short handle trim, remove by sliding trim straight down and off of handle bracket.

**TO REMOVE REFRIGERATOR HANDLE:**
(Handles may be easier to reverse while doors are off.)
1. Remove two screws attaching handle to top of refrigerator door.
2. Swing top of handle away from door and slide handle down and off of dovetail button.
3. Remove screw and dovetail button and install on other side, moving hole plugs from corresponding holes to opposite side.

**TO ATTACH REFRIGERATOR HANDLE:**
1. Start with handle offset away from door. Place bottom of handle over dovetail button, swing handle into an upright position and pull upward, locking it into place.
2. Secure top of handle with screws.

**TO ATTACH TRIM:**
1. Slide both trim locks out of trim.
2. Insert new adhesive trim locks contained in your literature pack.

**NOTE:** Trim lock must be removed and installed by sliding over the two donut shaped areas.
3. Install trim to handle by sliding over base of handle. Carefully align trim and press down at trim lock locations.
4. Replace hole plug on opposite side. Use rubbing alcohol to remove any adhesive residue from old trim lock locations.
Features may vary according to model
COOL DOWN PERIOD
To ensure safe food storage, allow the refrigerator to operate with the doors closed for at least 8 to 12 hours before loading it with food.

REFRIGERATOR & FREEZER CONTROLS

NOTE: When first setting the controls or when changing a setting, wait 24 hours for the temperature to stabilize before making additional changes.

TEMPERATURE ADJUSTMENT

NOTE: When first turning refrigerator on, move refrigerator and freezer controls to ▼ which is the recommended initial setting. After 24 hours, adjust the controls as needed.

- Adjust temperature gradually: move the knob in small increments, allowing the temperature to stabilize.
- For colder temperatures, turn the knob towards Cold.
- For warmer temperatures, turn the knob towards Warm.

Turning the refrigerator control will change temperatures in both compartments. For example, if the refrigerator control is turned to a colder setting, the freezer control may have to be adjusted to a warmer setting. Turning the freezer control will change only the freezer temperature.

To maintain temperatures, a fan circulates air in the refrigerator and freezer compartments. For good circulation, do not block cold air vents with food items.

TEMPERATURE ADJUSTMENT GUIDE

| If Refrigerator compartment Is Too Warm | Turn Refrigerator Control Slightly Towards Cold. |
| If Refrigerator compartment Is Too Cold | Turn Refrigerator Control Slightly Towards Warm. |
| If Freezer compartment Is Too Warm    | Turn Freezer Control Slightly Towards Colder.    |
| If Freezer compartment Is Too Cold   | Turn Freezer Control Slightly Towards Warmer.   |
| To Turn Refrigerator Off             | Turn Refrigerator Control To 0.                  |

IMPORTANT: Turning the refrigerator temperature control to “0” turns off the compressor, but does not disconnect the power to the light bulb and other electrical components.
SHELF ADJUSTMENT

Refrigerator shelves are easily adjusted to suit individual needs. Before adjusting the shelves, remove all food.

To adjust sliding shelves:
1. Remove shelf by pulling forward to stop position.
2. Lift front edge up and pull out.
Replace the shelf on any pair of rails by reversing this procedure.

To adjust cantilever shelves:

NOTE: Cantilever shelves are supported at the back of the refrigerator. Cantilever shelves are available in either glass or wire.

1. Lift front edge up.
2. Pull shelf out.
Replace the shelf by inserting the hooks at rear of the shelf into the wall bracket. Lower the shelf into the desired slots and lock into position.

SpillProof™ glass shelves (some models) catch and hold accidental spills. In some models, the SpillProof™ shelves slide out for easy access to food and for fast cleaning. The shelves slide out independently of the cantilever brackets. Just pull the front of the shelf forward. The shelf can be extended as far as the stopper will allow but it is not removable from the cantilever bracket.
DOOR STORAGE
Door bins, shelves, and racks are provided for convenient storage of jars, bottles, and cans. Frequently used items can be quickly selected.

Some models have door racks or bins that can accommodate gallon-sized plastic drink containers and economy-sized jars and containers. Some racks are adjustable for maximum storage capacity.

The dairy compartment, which is warmer than the general food storage section, is intended for short term storage of cheese, spreads, or butter.

TALL BOTTLE RETAINER (SOME MODELS)
The Tall Bottle Retainer keeps tall containers in the bin from falling forward when opening or closing the refrigerator door. To install, hold the retainer at the top, and slide it over the outside wall of the bin, as shown in the diagram. The Tall Bottle Retainer works best with a Bin Snugger.

SPECIAL ITEM RACK (SOME MODELS)
The innovative design of the Special Item Rack allows you to store a six-pack of 12 ounce drink cans, a bottle of wine, a two-liter soft drink bottle, or a carton of eggs. The Special Item Rack mounts on the left side of your refrigerator. To install, just slide the Special Item Rack onto any shelf as shown in the drawing.

ADJUSTABLE DOOR BINS
Some models have adjustable door bins that can be moved to suit individual needs.

To move door bins
1. Lift bin straight up.
2. Remove bin.
3. Place bin in desired position.
4. Lower bin onto supports until locked in place.
CRISPERS (SOME MODELS)
The crispers, located under the bottom refrigerator shelf, are designed for storing fruits, vegetables, and other fresh produce. Wash items in clear water and remove excess water before placing them in the crispers. Items with strong odors or high moisture content should be wrapped before storing.

DELI DRAWER (SOME MODELS)
Some models are equipped with a Deli Drawer for storage of luncheon meats, spreads, cheeses, and other deli items.

HUMIDITY CONTROL (SOME MODELS)
The Humidity Control, present on some models with crisper drawers, allows you to adjust the humidity within the crisper. This can extend the life of fresh vegetables that keep best in high humidity.

NOTE: Leafy vegetables keep best when stored with the Humidity Control set on High Humidity, or in a drawer without a Humidity Control. This keeps incoming air to a minimum and maintains maximum moisture content.

WINE RACK (SOME MODELS)
The Wine Rack stores bottles of wine, or single two-liter plastic bottles of juice or soda pop. To install, slide the Wine Rack onto the shelf with the curve facing in. To remove, slide the Wine Rack out. Install on either side of shelf.
If your refrigerator has an automatic ice maker, it will provide a sufficient supply of ice for normal use. During the initial startup of your refrigerator, however, no ice will be produced during the first 24 hours of operation. Automatic ice makers are also optional accessories that may be installed in most models at any time. Call your local dealer for information.

TURNING YOUR ICE MAKER ON

After the plumbing connections have been completed, the water supply valve must be opened. Place the ice container under the ice maker, pushing it as far back as possible. Lower the wire signal arm to its “down” or ON position. New plumbing connections may cause the first production of ice cubes to be discolored or have an odd flavor. These first cubes should be discarded until the cubes produced are free of discoloration and taste.

TURNING YOUR ICE MAKER OFF

To stop the ice maker, lift the wire signal arm until it clicks and locks in the “up” or OFF position. The ice maker also turns off automatically when the ice container is full. If your model has an adjustable freezer shelf, place the shelf in the lower position, so that the wire signal arm will hit the ice when the container is full.

⚠️ CAUTION ⚠️ Chemicals from a malfunctioning softener can damage the ice maker. If the ice maker is connected to soft water, ensure that the softener is maintained and working properly.

ICE MAKER TIPS

- Ice cubes stored too long may develop an odd flavor. Empty the ice container and ensure that the wire signal arm is in its “down” or ON position. The ice maker will then produce more ice.
- Occasionally shake the ice container to keep ice separated.
- Keep the wire signal arm in its “up” or OFF position until the refrigerator is connected to the water supply or whenever the water supply is turned off.
- The following sounds are normal when the ice maker is operating:
  - Motor running
  - Ice loosening from tray
  - Ice dropping into ice container
  - Running water
  - Water valve opening or closing

NOTE: For more information on these operations, see Normal Operating Sounds and Sights section on page 16.

⚠️ CAUTION ⚠️ Do Not place the ice container in your dishwasher.

- Wash the ice container in warm water with mild detergent. Rinse well and dry.
- Stop the ice maker when cleaning the freezer and during vacations.
- If the ice maker will be turned off for a long period of time, turn the water supply valve to the closed position.
FOOD STORAGE IDEAS

**Fresh Food Storage**
- The fresh food compartment should be kept between 34 °F and 40 °F with an optimum temperature of 37 °F.
- Avoid overcrowding the refrigerator shelves. This reduces the circulation of air around the food and results in uneven cooling.

**Fruits and Vegetables**
- Storage in the crisper drawers traps moisture to help preserve the fruit and vegetable quality for longer time periods.

**Meat**
- Raw meat and poultry should be wrapped securely so leakage and contamination of other foods or surfaces does not occur.

**Frozen Food Storage**
- The freezer compartment should be kept at 0 °F or lower.
- A freezer operates most efficiently when it is at least 2/3 full.

**Packaging Foods for Freezing**
- To minimize dehydration and quality deterioration, use aluminum foil, freezer wrap, freezer bags or airtight containers. Force as much air out of the packages as possible and seal them tightly. Trapped air can cause food to dry out, change color, and develop an off-flavor (freezer burn).
- Wrap fresh meats and poultry with suitable freezer wrap prior to freezing.
- Do not refreeze meat that has completely thawed.

**Loading the Freezer**
- Avoid adding too much warm food to the freezer at one time. This overloads the freezer, slows the rate of freezing, and can raise the temperature of frozen foods.
- Leave a space between the packages, so cold air can circulate freely, allowing food to freeze as quickly as possible.
- Avoid storing hard-to-freeze foods such as ice cream and orange juice on the freezer door shelves. These foods are best stored in the freezer interior where the temperature varies less.

---

ENERGY SAVING IDEAS

- Locate the refrigerator in the coolest part of the room, out of direct sunlight, and away from heating ducts or registers. Do not place the refrigerator next to heat-producing appliances such as a range, oven, or dishwasher. If this is not possible, a section of cabinetry or an added layer of insulation between the two appliances will help the refrigerator operate more efficiently.
- Level the refrigerator so that the doors close tightly.
- Refer to this Use & Care Manual for the suggested temperature control settings.
- Periodic cleaning of the condenser will help the refrigerator run more efficiently. See the Care and Cleaning Chart on page 17.
- Do not overcrowd the refrigerator or block cold air vents. Doing so causes the refrigerator to run longer and use more energy.
- Cover foods and wipe containers dry before placing them in the refrigerator. This cuts down on moisture build-up inside the unit.
- Organize the refrigerator to reduce door openings. Remove as many items as needed at one time and close the door as soon as possible.
UNDERSTANDING THE SOUNDS YOU MAY HEAR
Your new high-efficiency refrigerator may make unfamiliar sounds. Don’t be alarmed, these are all normal sounds. Hard surfaces, such as vinyl or wood floors, walls, and kitchen cabinets may make sounds more noticeable. Listed below are descriptions of some of the most common sounds you may hear, and what is causing them.

NOTE: Rigid foam insulation is very energy efficient, but is not a sound insulator.

A. Evaporator
The flow of refrigerant through the evaporator may create a boiling or gurgling sound.

B. Evaporator Fan
You may hear air being forced through the refrigerator by the evaporator fan.

C. Defrost Heater
During defrost cycles, water dripping onto the defrost heater may cause a hissing or sizzling sound. After defrosting, a popping sound may occur.

IMPORTANT: During the automatic defrost cycle, you may notice a red glow in the vents on the back wall of your freezer compartment. This is normal during the defrost cycle.

D. Automatic Ice Maker
If your refrigerator is equipped with an automatic ice maker, you will hear ice cubes falling into the ice bin.

E. Cold Control & Defrost Timer
These parts can produce a snapping or clicking sound when turning the refrigerator on and off. The timer also produces sounds similar to an electric clock.

F. Condenser Fan
If condenser coils are located underneath your refrigerator as shown in the drawing at the left, you have a condenser fan. You may hear air being forced through the condenser by the condenser fan.

G. Compressor
Modern, high-efficiency compressors operate much faster than older models. The compressor may have a high-pitched hum or pulsating sound.

H. Water Valve
If your refrigerator is equipped with an automatic ice maker, you will hear a buzzing sound as the water valve opens to fill the ice maker during each cycle.

I. Drain Pan (Nonremovable)
You may hear water running into the drain pan during the defrost cycle. The drain pan will be located on top of the compressor for air-cooled condensers (black coils on back of refrigerator).

J. Condenser Coils (Fan-cooled models only)
**Care & Cleaning**

Keep your refrigerator and freezer clean to prevent odor build-up. Wipe up any spills immediately and clean both sections at least twice a year. Never use metallic scouring pads, brushes, abrasive cleaners or strong alkaline solutions on any surface. Do not wash any removable parts in a dishwasher. Always unplug the electrical power cord from the wall outlet before cleaning.

**CAUTION**

- When moving the refrigerator, pull straight out. Do not shift the refrigerator from side to side as this may tear or gouge the floor covering. If the refrigerator has an automatic ice maker, be careful not to move the refrigerator beyond the plumbing connections.
- Damp objects stick to cold metal surfaces. Do not touch refrigerated surfaces with wet or damp hands.
- To avoid damage and help the refrigerator run as efficiently as possible, clean the condenser periodically.

**NOTES:**

- Turning the refrigerator temperature control to "0" turns off the compressor, but does not disconnect electrical power to the light bulb or other electrical components.
- Do not use razor blades or other sharp instruments which can scratch the appliance surface when removing adhesive labels. Any glue left from tape or labels can be removed with a mixture of warm water and mild detergent, or, touch the glue residue with the sticky side of tape you have already removed. Do not remove the serial plate.

---

### Care & Cleaning Chart

**Before You Call**

<table>
<thead>
<tr>
<th>Common Occurrences</th>
<th>Before calling for service, review this list. It may save you time and expense. This list includes common occurrences that are not the result of defective workmanship or materials in this appliance.</th>
</tr>
</thead>
</table>
| Refrigerator does not run. | • Ensure plug is tightly pushed into electrical outlet.  
• Check/replace fuse with a 15 amp time-delay fuse. Reset circuit breaker.  
• The temperature control is turned to “O”.  
• Refrigerator may be in defrost cycle. Wait 20 minutes and check again. |
| Freezer temperature too cold. Refrigerator temperature is satisfactory. | • Set freezer control to a warmer setting until freezer temperature is satisfactory. Allow 24 hours for the temperature to stabilize. |
| Refrigerator temperature too cold. Freezer temperature is satisfactory. | • Set refrigerator control to a warmer setting. Allow 24 hours for temperature to stabilize. Then check freezer temperatures and adjust as needed. |
| * Refrigerator is noisy or vibrates. | • The cabinet is not level.  
• Floor is weak. |
| Odors in refrigerator. | • Interior needs to be cleaned.  
• Foods that produce odors should be covered or wrapped. |
| Cabinet light not working. | • Replace light bulb.  
• Ensure plug is tightly pushed into electrical outlet.  
• Light switch may be stuck. Push in light switch, located on the refrigerator control box, to release. |
| Automatic ice maker not working. (some models) | • Ensure the Wire Signal Arm is not in UP position.  
• Ice maker should produce 4 to 5 pounds of ice in a 24 hour period.  
• Water supply is turned off.  
• Water pressure is too low.  
• The freezer is not cold enough. |
