Your safety and the safety of others is very important. We have provided many important safety messages in this manual and on your appliance. Always read and obey all safety messages.

This is the safety alert symbol. This symbol alerts you to hazards that can kill or hurt you and others. All safety messages will be preceded by the safety alert symbol and the word “DANGER” or “WARNING”. These words mean:

**DANGER**

You will be killed or seriously injured if you don’t follow instructions.

**WARNING**

You can be killed or seriously injured if you don’t follow instructions.

All safety messages will identify the hazard, tell you how to reduce the chance of injury, and tell you what can happen if the instructions are not followed.
IMPORTANT SAFETY INSTRUCTIONS

WARNING: To reduce the risk of fire, electric shock, or injury to persons when using your washer, follow basic precautions, including the following:

• Read all instructions before using the washer.
• Do not wash articles that have been previously cleaned in, washed in, soaked in, or spotted with gasoline, dry-cleaning solvents, other flammable or explosive substances as they give off vapors that could ignite or explode.
• Do not add gasoline, dry-cleaning solvents, or other flammable or explosive substances to the wash water. These substances give off vapors that could ignite or explode.
• Under certain conditions, hydrogen gas may be produced in a hot water system that has not been used for 2 weeks or more. HYDROGEN GAS IS EXPLOSIVE. If the hot water system has not been used for such a period, before using a washing machine, turn on all hot water faucets and let the water flow from each for several minutes. This will release any accumulated hydrogen gas. As the gas is flammable, do not smoke or use an open flame during this time.
• Do not allow children to play on or in the washer. Close supervision of children is necessary when the washer is used near children.
• Before the washer is removed from service or discarded, remove the lid.
• Do not reach into the washer if the tub or agitator is moving.
• Do not install or store this washer where it will be exposed to the weather.
• Do not tamper with controls.
• Do not repair or replace any part of the washer or attempt any servicing unless specifically recommended in the Owner's Manual or in published user-repair instructions that you understand and have the skills to carry out.
• See the "INSTALLATION INSTRUCTIONS" section for grounding requirements.

ELECTRICAL REQUIREMENTS
120-Volt, 60-Hz., AC-only, 15- or 20-ampere fused electrical supply is required. (Time-delay fuse or circuit breaker is recommended.) Connect to an individual branch circuit.

WARNING
Electrical Shock Hazard
Plug into a grounded 3 prong outlet.
Do not remove ground prong.
Do not use an adapter.
Do not use an extension cord.
Failure to follow these instructions can result in death, fire, or electrical shock.

This washer is equipped with a power supply cord having a 3-prong grounding plug. To minimize possible shock hazard, you must plug the power supply cord into a mating 3-prong grounding-type wall receptacle, grounded in accordance with National Electrical Code, ANSI/NFPA 70-latest edition and all local codes and ordinances.

GROUNDING INSTRUCTIONS
This washer must be grounded. In the event of malfunction or breakdown, grounding will reduce the risk of electrical shock by providing a path of least resistance for electric current. This washer is equipped with a cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

WARNING: Improper connection of the equipment grounding conductor can result in a risk of electric shock. Check with a qualified electrician or serviceman if you are in doubt as to whether the appliance is properly grounded.

Do not modify the plug provided with the appliance – if it will not fit the outlet, have a proper outlet installed by a qualified electrician.

For a permanently connected washer:
GROUNDING INSTRUCTIONS
This washer must be connected to a grounded metal, permanent wiring system, or an equipment grounding conductor must be run with the circuit conductors and connected to the equipment-grounding terminal or lead on the appliance.
A. SELECT LOCATION
FOR YOUR WASHER –

Selecting the proper location for your washer will improve its performance and minimize concerns like washer walk or noise.

RECESSED AREA /
CLOSET INSTALLATION INSTRUCTIONS
This washer may be installed in a recessed area or closet.

- The installation spacing is in inches (centimeters) and is the minimum allowable.
- Allow additional space if other appliances are to be installed in the area.
- If closet door is installed, the minimum air openings in top and bottom are required. Louvered doors with equivalent air openings in top and bottom are acceptable.

*Additional clearance for wall, door and floor moldings may be required.
To reduce transfer of washer sounds, a clearance of 1 in (2.5 cm) on the sides of the washer is recommended.
LAUNDRY TUB DRAIN SYSTEM

Check location where washer will be installed. This washer can be installed using one of three systems:

- Laundry tub drain system (below)
- Standpipe drain system (p. 13)
- Floor drain system (p. 13)

Do not store or operate washer at or below 32°F (0°C) (some water may remain in washer). See page 34 for winterizing information.

Proper installation is your responsibility. Make sure you have everything necessary for correct installation including the following points:

Grounded receptacle: Must be within 4 ft (1.2 m) of where the power cord is attached to the back of the washer.

Hot and cold water faucets:
Must provide water pressure between 20-100 psi and be within 4 ft (1.2 m) of the hot and cold water fill valves attached to the back of the washer.

Laundry tub drain system:
Needs a minimum 20 gal (76 L) laundry tub.

Support: Floor must be sturdy enough to support a total weight of 315 lbs (143 kg) (including washer, water, and load weight).

Level floor: Maximum allowable slope under entire washer - 1 in (2.5 cm).

Top of tub must be at least 39 in (99 cm) above floor and no higher than 96 in (2.4 m) from bottom of washer.
ALTERNATE LOCATIONS – STANDPIPE AND FLOOR DRAIN SYSTEMS

Siphon break: Must be purchased separately. See chart below.

Standpipe drain system: Needs a 2 in (5 cm) minimum diameter standpipe with minimum carry-away capacity of 17 gal (64 L) per minute. Top of standpipe must be at least 39 in (99 cm) inches above floor and no higher than 96 in (2.4 m) from bottom of washer.

Floor drain system: Requires a siphon break, see chart below. A minimum carry-away capacity of 17 gal (64 L) per minute is required.

B. REMOVE SHIPPING STRAP

Removing the shipping strap is necessary for smooth operation. If the shipping strap is not removed, the washer will make excessive noise.

**WARNING**

Excessive Weight Hazard
Use two or more people to move and install washer.
Failure to do so can result in back or other injury.

To prevent floor damage, set washer onto cardboard before moving across floor. Move washer close to its final location.

**STEP 1.** Do not cut yellow strap. Pull yellow strap firmly, until completely removed from washer. Depending on your model, there should be either two or three cotter pins on the end of the shipping strap when it is pulled out of the washer. The electrical plug is attached to this shipping strap.

**STEP 2.** Pull firmly to remove the other end of the shipping strap pinned to the back of washer. This will release the rear self-leveling legs.

**STEP 3.** Cut the shipping strap about 16 inches (40 cm) from plug end. Look for the words “CUT HERE.” Discard end with the cotter pins. Slide remainder of shipping strap free from the electrical plug. You will use this to secure the drain hose.
C. CONNECT DRAIN HOSE

_provided for your Benefit_

Proper connection of the drain hose will protect your floors from damage due to water leakage.

**STEP 1.** To prevent the drain hose from coming off or leaking, it must be installed per the following instructions:

**IMPORTANT:** To ensure proper installation, this procedure must be followed exactly.

a. Wet the inside of the straight end of the drain hose with tap water. **DO NOT USE ANY OTHER LUBRICANT.**

b. Squeeze ears of silver, double-wire clamp with pliers to open. Place clamp over the straight end of the drain hose ¼ inch from the end.

c. Open clamp. Twist hose back and forth while pushing down onto drain connector at the bottom of the washer. Continue until hose contacts the ribbed stop on the cabinet.

d. Place clamp over area marked “CLAMP.” Release clamp.

Parts listed are available from your local Sears store or Sears Service Center. In the United States, call 1-800-366-PART (1-800-366-7278). In Canada, call 1-877-533-6937.
**For standpipe or laundry tub drain systems:**

**STEP 2.** Open yellow, single-wire clamp with pliers and slide over hooked end of drain hose to secure the rubber and corrugated sections together.

**STEP 3.** Put hooked end of drain hose into laundry tub or standpipe. Check for proper length of drain hose. Rotate hook to eliminate kinks.

To prevent drain water from going back into the washer:

- Do not straighten hooked end of drain hose and force excess drain hose into standpipe.
- Do not lay excess drain hose in bottom of laundry tub.

**D. CONNECT INLET HOSES TO WASHER**

**for your Benefit**

Proper connection of your inlet hoses will allow hot and cold water to enter your washer properly. We recommend connecting both the hot and cold water inlet hoses for optimal performance of your washer. If you only connect one water hose, you must cap off the remaining water inlet port.

**NOTE:** Replace inlet hoses after five years of use to reduce the risk of hose failure. Periodically inspect and replace inlet hoses if bulges, kinks, cuts, wear, or leaks are found. When replacing your inlet hoses, mark the date of replacement on the label with a permanent marker.

**STEP 1.** Insert one new, flat washer (from the parts bag) into each end of the inlet hoses. Check that washers are firmly seated in couplings.
E. CONNECT INLET HOSES TO WATER FAUCETS

STEP 1. Make sure washer basket is empty. Run water through both faucets into a bucket or laundry tub to get rid of particles in the water lines that might clog hoses. Determine which faucet is hot and which is cold. Mark the hot water faucet.

STEP 2. Attach the hose with the red coupling to the hot water (bottom) inlet valve. Attaching the red coupling first makes it easier to tighten connection with pliers. Screw on coupling by hand. Make an additional two-thirds turn with pliers to tighten coupling. DO NOT OVER-TIGHTEN; this could damage the valves.

STEP 3. Attach the hose with the blue coupling to the cold water (top) inlet valve. Screw on coupling by hand. Make an additional two-thirds turn with pliers to tighten coupling. DO NOT OVER-TIGHTEN; this could damage the coupling.

STEP 4. Turn on water faucets and check for leaks. A small amount of water may enter the washer. You will drain this later.

If you have: Water faucets beyond the reach of water fill hoses

If you need to buy: 2 longer water fill hoses:
6 ft (1.8 m) hoses, Part No. 76314
10 ft (3.0 m) hoses, Part No. 350008

Parts listed are available from your local Sears store or Sears Service Center. In the United States, call 1-800-366-PART (1-800-366-7278). In Canada, call 1-877-533-6937.
F. SECURE DRAIN HOSE

Securing the drain hose properly will protect your floors from damage due to water leakage.

STEP 1. Move washer to its final location.

STEP 2. Locate the remaining piece of shipping strap (not the end with the cotter pins) from STEP 3 of “REMOVE SHIPPING STRAP.” Use it to wrap the drain hose together with the laundry tub or standpipe. Push fastener into the nearest hole in the shipping strap.

If the water faucets and drain standpipe are recessed, put hooked end of drain hose in standpipe. Tightly wrap the shipping strap around the drain hose and water inlet hoses (not the handles or stems). Push fastener into the nearest hole in the shipping strap.
G. LEVEL WASHER

Leveling your washer properly prevents excessive noise and vibration.

To install front legs:

STEP 1. Prop front of washer up (about 4 in [10.2 cm]). Use a wood block or another object that will support the weight of the washer. If washer was placed against a wall, move the washer out slightly before tipping it up.

STEP 2. With one of the legs in hand, screw lock nut onto leg ¾ in (9.5 cm) from top of leg base. This is the recommended initial setting.

STEP 3. Screw leg into washer base by hand until nut reaches washer base. Repeat for other leg.

STEP 4. Tilt washer backward until front of washer is off the wood block. Remove wood block. Gently lower washer to floor.

STEP 5. Move washer to its final location.

STEP 6. Tilt washer forward until rear of washer is at least 3 in (7.6 cm) off floor. You may hear the self-adjusting rear legs click into place. Lower washer to floor. Check levelness of the washer by placing a level on top of the washer, first side-to-side; then front-to-back.

STEP 7. If washer is not level, prop up the front of the washer and adjust the legs up or down as necessary. Lower washer and reset self-adjusting rear legs (as in Step 6). Repeat Step 7 until the washer is level.

STEP 8. When washer is in its final location and level, use a ⅜ in (1.43 cm) open-end wrench to turn nuts on front legs tightly against washer cabinet. If nuts are not tight against washer cabinet, the washer may vibrate.
REVIEW INSTALLATION

for your Benefit

Take a few minutes to complete this checklist. It will help assure you that you have a proper installation and increase your satisfaction with your Kenmore ELITE™ washer.

☐ Check electrical requirements. Be sure you have correct electrical supply and recommended grounding method.

☐ Check that you have:
  • All the tools you started with.
  • Removed all shipping materials.
  • Removed shipping strap with cotter pins.
  • Installed all parts listed on pages 7-9.

☐ Check that:
  • The washer is level.
  • The nuts on the front legs are tight.

☐ Check that the water faucets are turned on.

FINAL STEPS

☐ Plug power supply cord into grounded outlet.

☐ Remove the blue protective film on the console and any tape remaining on washer.

☐ Take a few minutes and read the "OPERATING YOUR WASHER" section to fully understand your new washer. Then, start the washer and allow it to complete the ULTRA CLEAN Cycle.
OPERATING YOUR WASHER

To get the maximum cleaning and fabric care from your washer, please read and follow these instructions.

NOTE: The drawings in this section show the basic features of all models covered by this manual. Refer to the supplied "Feature Sheet" for your washer's particular features.

LID INSTRUCTIONS
These instructions are found under the lid of your washer.

OPERATING SUGGESTIONS

DISPENSER ———— Add measured liquid chlorine bleach to the "Timed Bleach Dispenser". It will automatically dispense the bleach at the right time for the best wash performance.

DO NOT USE POWDERED BLEACH IN THIS DISPENSER.

Add measured fabric softener to the agitator mounted dispenser.

Add measured detergent to the washer basket.

1. SELECT & ADJUST
Make the selections for these washer controls:

- WATER LEVEL — Adjust to load size.
- RINSE OPTIONS — Select to add a second rinse automatically.
- SPEEDS — Adjust to fabric type being washed.

2. SELECT CYCLE
Choose more time for heavily soiled loads and less time for lightly soiled loads.

3. PULL TIMER TO START
Lid must be closed to complete cycle. PUSH TIMER TO STOP
It's best to wash stains as soon as possible.

STARTING YOUR WASHER

STEP 1. Add measured detergent into washer basket. Then place a load of sorted clothes in the washer.

STEP 2. (OPTIONAL STEP) If desired, add measured liquid chlorine bleach to the liquid bleach dispenser (see page 30).

STEP 3. (OPTIONAL STEP) If desired, add measured liquid fabric softener to the fabric softener dispenser (see page 31).

STEP 5. Set WATER LEVEL Control \( A \) based on the size of your wash load (see page 24).

STEP 6. Set the WATER TEMPERATURE Control \( B \) (see pages 24-25).

STEP 7. Set RINSE OPTIONS Control \( C \) (see pages 28).

STEP 8. Set SPEEDS \( D \) Control according to the type of fabric in the load (see page 25).

STEP 9. Push the Cycle Selector Control (Timer) knob \( E \) in and turn to the right to desired setting (see page 26).

STEP 10. Pull the Cycle Selector Control (Timer) knob \( E \) out. The dial will rotate as the cycle progresses. The knob will not rotate.

STOPPING/RESTARTING YOUR WASHER

• To stop the washer at any time, push the Cycle Selector Control (Timer) knob \( E \) in.
• Pull the knob out to restart.
WATER LEVEL CONTROL

This control gives you the flexibility to save water when washing small loads.

Your washer lets you select a water setting based on the size of your wash load:

- For normal loads, start with the MEDIUM LOAD Setting. Adjust up or down depending on your load. Clothes should move freely and roll toward the agitator.

Washers with a variable Water Level Control:

- The variable control lets you select a water level anywhere from SMALL LOAD to LARGE LOAD.
- To change to a higher water level setting after the washer has started to agitate, turn the knob to RESET, then to the desired new setting.

Washers with 4-position or 5-position Water Level Control:

- To change to a higher water level setting after the washer has started to agitate, turn the knob to the desired new setting.

WATER TEMPERATURE CONTROL

Your washer lets you select a wash and rinse water temperature setting based on the type of load you are washing.

- Using warm rinse water will leave loads dryer after the spin cycle than if you use cold rinse water. However, warm rinses may increase wrinkling when line drying.
- In cold climates, warm rinse water also provides a more comfortable temperature for handling the wash load. Warm rinse is controlled to 75°F (24°C).

### SELECTING WATER TEMPERATURES

<td>Best for very lightly soiled items • Saves hot water</td>
</tr>
</tbody>
</table>

*In wash water temperatures colder than 70°F (21°C), detergents do not dissolve well. Also, soils may be difficult to remove and some fabrics may retain wear wrinkles and have increased pilling – the formation of small lint-like balls on the surface of garments. Pilling is the natural result of wearing and washing of garments.
AUTOMATIC TEMPERATURE CONTROL (ATC)

**for your Benefit**

ATC takes away the worry of undissolved detergent and ensures consistent cleaning results from season to season with warm and cold washes.

ATC electronically senses and maintains a uniform water temperature by regulating incoming hot and cold water.

- Even in cold wash, some warm water is let into the washer to maintain a temperature minimum of 70°F (21°C). In very cold water, detergent may not dissolve and clothes will not be cleaned completely.
- Warm wash is regulated at approximately 100°F (38°C). ATC does not control the hot wash water temperature.
- Warm rinse is regulated at approximately 75°F (24°C) for all warm rinse settings. This may be a cooler warm rinse than what you are used to, but it saves energy and still gives you proper rinsing and a load that is comfortable to remove.

SPEEDS DESCRIPTIONS

This section illustrates and describes the wash/spin speeds you can select with the SPEEDS Control. Each speed setting is designed for different types of fabrics and soil levels.

**HANDWASH PLUS FINE DELICATES**

Use this speed setting for hand washable and special-care items. Garments are labeled "Hand Wash" because:

- The fiber or construction may be sensitive to agitation.
- The fabric contains sensitive dyes that may bleed.

The wash action mirrors the way you would treat hand washable garments in a sink. It does this by repeating periods of extra-slow speed agitation and soaking. Slow spin speeds help reduce wrinkling. Do not use this cycle for large items like blankets.

**NOTE:** Some "Hand Wash" items, particularly wool, naturally shrink when washed. Keep this in mind when you purchase items labeled "Hand Wash." Items that shrink should be dried flat. When still wet, block these items by gently stretching to original measurements.

**HANDWASH/CASUAL**

Use this speed setting for lingerie and loosely knit items. Setting combines extra-slow speed agitation for gentle soil removal and slow spin speeds to reduce wrinkling.

**DELICATE**

Use this speed setting for washable knit fabrics and permanent press fabrics. Setting combines slow speed agitation for gentle soil removal and slow spin speeds to reduce wrinkling.

**REGULAR**

Use this speed setting for normally soiled cottons and linens. Setting combines slow speed agitation and fast spin speeds to shorten drying time.

**HEAVY DUTY**

Use this speed setting for sturdy or heavily soiled loads. Setting combines fast speed agitation and fast spin speeds.

**HANG DRY**

Use this speed setting for sturdy permanent press fabrics that will be line dried. Setting combines fast speed agitation and slow spin speeds to reduce wrinkling.
SETTING YOUR CYCLE SELECTOR (TIMER) CONTROL
Use this control to choose the agitation time and to start the washer.
• For heavy soil and sturdy fabrics, use the full time.
• For light soil and delicate fabrics, use less time.

PERMANENT PRESS II

The PERMANENT PRESS II Cycle includes a load cooling process that reduces wrinkling compared to other cycles.
You can select up to 10 minutes of wash time.

NOTE: When the timer reaches PAUSE, the washer will drain and pause for no more than two minutes while some of the wash water is drained and replaced with rinse water.

ULTRA CLEAN
Use this cycle for most loads to get between 6 and 16 minutes of wash time.

Prewash
Use this cycle to get up to 4 minutes of agitation to help remove heavy soils and stains that need pretreatment. Prewash Cycle should be followed by an ULTRA CLEAN or PERMANENT PRESS II Cycle with additional detergent added.

Soak
SOAK Cycle features 4 minutes of agitation followed by an unlimited soak time to help remove heavy soils and stains that need pretreatment. You will need to reset the washer to a SPIN setting to remove water. SOAK Cycle should be followed by an ULTRA CLEAN, PERMANENT PRESS II, or Prewash Cycle with additional detergent.

NOTE: We do not recommend hot water for soaking. It may set some stains.

RINSE OPTIONS CONTROL

_for your Benefit_

A second rinse will remove more detergent residue. It is especially beneficial if extra detergent has been used to remove heavy soils.

SECOND RINSE

Your washer allows you to add an automatic second rinse to the ULTRA CLEAN Cycle or PERMANENT PRESS II Cycle. Set the RINSE OPTIONS Control on 2ND RINSE before you start the washer. You won't have to come back to select a second rinse.

RINSE AND SPIN

When using extra detergent for heavily soiled clothes, or washing special-care items, you may find an extra rinse and spin is needed.

**STEP 1.** Set WATER LEVEL Control.

**STEP 2.** Set WATER TEMPERATURE Control.

**STEP 3.** Set RINSE OPTIONS Control to ONE RINSE.

**STEP 4.** Set SPEEDS Control:

- For fast spin, use the HEAVY DUTY setting.
- For slow spin, use the DELICATE setting.

**STEP 5.** Set the Cycle Selector Control (Timer) knob to a SPIN setting.

**STEP 6.** Pull the Cycle Selector Control (Timer) knob out to start washer.

SPIN ONLY

A drain and spin may help shorten drying times for some heavy fabrics or special-care items by removing excess water.

**STEP 1.** Set RINSE OPTIONS Control to ONE RINSE.

**STEP 2.** Set SPEEDS Control:

- For fast spin, use the HEAVY DUTY setting.
- For slow spin, use the DELICATE setting.

**STEP 3.** Set the Cycle Selector Control (Timer) knob to a SPIN setting.

**STEP 4.** Pull the Cycle Selector Control (Timer) knob out to start washer.
SELF-CLEANING LINT FILTER

for your Benefit

Lint is filtered from the load automatically – there’s no messy cleanup.

Your washer features a self-cleaning filter that traps lint from the water while the washer is washing and deep rinsing the laundry. The trapped lint is flushed down the drain automatically. You don’t have to clean the filter.

QUIET PAK™ II

The QUIET PAK™ II System is designed to reduce water sounds and ringing noises. The cabinet is insulated with three sound-dampening materials for superior vibration and sound-dampening characteristics.

TOTAL CARE™ AGITATOR

for your Benefit

Kenmore’s exclusive TOTAL CARE™ Agitator has triple action agitation to give you the most flexible fabric care for even your largest loads.

The TOTAL CARE™ Agitator moves in three directions, depending on load size, to ensure proper cleaning. The best cleaning action in your washer takes place at the bottom where the agitator vanes move back and forth to flex the fabric, loosening the soil.

The upper portion of the agitator features special vanes that push the clothes down in a spiraling pattern to where the cleaning action is, displacing the clothes that are there with a “roll-over” motion.

For your largest loads, the TOTAL CARE™ Agitator offers a load-sensing feature that actually senses when you are washing a very large load and responds with a third, vertical motion that senses the load size and guides items to the bottom.
UNDERSTANDING NORMAL WASHER SOUNDS
Your new washer may make sounds that your old one didn't. Because the sounds are unfamiliar, you may be concerned about them.
The following describes some of the normal sounds you may hear and what causes them.

During Washing
When you select a small load size setting for a small wash load, your washer has a lower water level. With this lower water level, you may hear a clicking sound from the upper portion of the agitator.

During Drain
The rate that water is drained from your washer depends on your installation. If water is drained quickly from the washer, you may hear air being pulled through the pump. This happens during the end of draining.

After Drain and Before Spin
When the cycle changes from draining to spinning, you may hear a noise as the gearcase shifts.

USING THE LIQUID CHLORINE BLEACH DISPENSER

After loading the washer, pour measured liquid chlorine bleach carefully into the dispenser.
• Do not let bleach splash, drip, or run down into washer basket. Undiluted bleach will damage any fabric it touches.
• Start the washer. Bleach will be dispensed automatically after the detergent has had time to work.
• Do not overfill. Look for the level markings on the dispenser cover. Dispenser holds 1 cup (250 mL) of liquid chlorine bleach.

NOTE: Do not use this dispenser to add powdered chlorine or color-safe bleach to your washer load. The dispenser is for liquid chlorine bleach only.
USING THE LIQUID FABRIC SOFTENER DISPENSER

After loading the washer, measure and add the recommended amount of fabric softener into the dispenser. Follow manufacturer's directions.

NOTE: Pouring too much fabric softener into the dispenser will cause the fabric softener to dispense instantly into the load due to siphoning action. This instant “dump” could damage fabrics and will make it appear that your dispenser is not working correctly.

- Add warm water to fill the dispenser until it reaches the bottom of the opening of the funnel-shaped portion of the dispenser.
- Fabric softener is dispensed into the first deep rinse water automatically.

NOTE: Fabric softeners are not compatible with detergents. This dispenser should never be used in the PREWASH Cycle since it would dispense fabric softener into a wash load that has not been rinsed. Undiluted fabric softener spilled on fabric may result in spots that look like oil stains.

If you ever use your dispenser this way by mistake, rewash the load with extra detergent to remove these deposits.

To Remove the Fabric Softener Dispenser for Cleaning:

STEP 1. Pull up on the Fabric Softener Dispenser to remove the dispenser from the agitator.

STEP 2. Grasp both ends of the dispenser. Pull to separate.

STEP 3. Remove internal holding cup.

STEP 4. Rinse all three parts with warm water.

STEP 5. Place the holding cup in the top outer portion of the dispenser.

STEP 6. Snap the bottom and the top of the Fabric Softener Dispenser together.

STEP 7. Replace the dispenser on the agitator; press firmly to snap into place.
PREPARING CLOTHES FOR WASHING

**for your Benefit**

Follow these recommendations to help you prolong the life of your garments.

- Close zippers, snaps, and hooks to avoid snagging other items. Remove pins, buckles, and other hard objects to avoid scratching the washer interior. Remove non-washable trim and ornaments.
- Empty pockets and turn them inside out.
- Turn down cuffs, brush away lint and dirt.
- Turn synthetic knits inside out to avoid pilling.
- Tie strings and sashes so they will not tangle.
- Mend tears, loose hems, and seams.
- Treat spots and stains.
- Stained or wet garments should be washed promptly for best results.

SORTING

- Separate heavily soiled items from lightly soiled ones, even if they would normally be washed together. Separate lint givers (towels, chenille) from lint takers (corduroy, synthetics, permanent press). When possible, turn lint givers inside out.
- Separate dark colors from light colors, colorfast items from non-colorfast items.
- Sort by fabric and construction (sturdy cottons, knits, delicate items).
LOADING

for your Benefit

Proper loading of your washer contributes to proper cleaning and fabric care and reduces machine noise.

- Drop items into washer loosely. Fill to the top of the basket (top row of holes). Do not wrap items around the agitator. Items should move easily through wash water for best cleaning and wrinkle-free results. Items should sink and reappear later.
- Load washer properly and select correct water level setting. Overloading or packing the machine, and selecting a setting too small for the wash load can:
  - cause poor cleaning
  - increase wrinkling
  - create excessive lint
  - wear out items faster (because of pilling)
- Load by the amount of space items take up, not by their weight.
- Mix large and small items in each load. Load evenly to maintain washer balance. An off-balance load can make the washer vibrate during spin.
- Use a higher water level setting to reduce wrinkling with permanent press clothes and some synthetic knits. These items should have more room to move in the water than heavy items (towels, jeans).
- Reduce wash time by using a lower water level setting. Loads with only a few small items need less wash time.

Loading Suggestions

For these suggested full-sized loads, set the WATER LEVEL selector to the highest water level setting.

CARING FOR YOUR WASHER

CLEANING YOUR WASHER

Exterior
Wipe up detergent, bleach, and other spills with a soft, damp cloth or sponge as they occur. Occasionally wipe the outside of the washer to keep it looking like new.
Do not put sharp or metal objects in your washer. They can damage the finish. Check all pockets for pins, clips, money, bolts, nuts, etc. Do not lay these objects on your washer after emptying pockets.

Interior
Clean interior with 1 cup (250 mL) of chlorine bleach mixed with 2 cups (500 mL) of detergent. Run washer through a complete cycle using hot water. Repeat process if necessary.

NOTE: Remove hard water deposits using only cleaners labeled as washer safe.

WATER INLET HOSES
Replace inlet hoses after five years of use to reduce the risk of hose failure. Periodically inspect and replace inlet hoses if bulges, kinks, cuts, wear or leaks are found. When replacing your inlet hoses, mark the date of replacement on the label with a permanent marker.

WINTER STORAGE OR MOVING CARE
Install and store your washer where it will not freeze. Because some water may stay in the hoses and pump, freezing can damage your washer. If storing or moving your washer during freezing weather, winterize it.

To winterize washer:
1. Shut off both water faucets.
2. Disconnect and drain water inlet hoses.
3. Put 1 qt (1 L) of R.V.-type antifreeze in the basket.
4. Run washer on a SPIN setting for about 30 seconds to mix the anti-freeze and water. Some of the mixture will pump out while the washer spins.
5. Unplug the power supply cord.

To use washer again:
1. Flush water pipes and hoses.
2. Reconnect water inlet hoses.
3. Turn on both water faucets.
4. Reconnect power supply cord.
5. Run the washer through a complete cycle with 1 cup (250 mL) of detergent to clean out antifreeze.

NON-USE OR VACATION CARE
Operate your washer only when you are at home. If you will be on vacation or not using your washer for an extended period of time, you should:
• Unplug the power supply cord or turn off electrical power to the washer.
• Turn off the water supply to the washer. This helps avoid accidental flooding (due to a water pressure surge) while you are away.
**TROUBLESHOOTING**

Most laundering problems are easily solved if you understand the cause. Check these lists for common laundry and washer problems. If you need further assistance, see service and assistance information on the back cover.
