## PRODUCT SPECIFICATIONS

**MOtor**
- Power source: 120 V AC, 60 Hz, 7.5 AMPS
- Horsepower: 1 HP (Max. Developed)
- Speeds: High 2600 FPM, Low 1410 FPM
- Type: Induction

**Cutting Capacity**
- Throat: 12-1/2"
- Height: 6"

**Blade Capacity**
- Width: 1/8", 1/4", 3/8", 1/2"
- Length: 91" (14" x 14"
- Tilt: 0 - 10° Left, 0 - 45° Right

**Blade Included**
- 3/8" x 91", 6 TPI

**Dust Collection**
- Yes

**Miter Gauge**
- Yes

---

## WARNING

To avoid mistakes that could cause serious injury, do not plug the band saw in until you have read and understood the following:

1. **READ** and become familiar with this entire instruction manual. LEARN the tool's applications, limitations, and possible hazards.
2. **KEEP GUARDS IN PLACE** and in working order.
3. **REMOVE ADJUSTING KEYS AND WRENCHES.** Form the habit of checking to see that keys and adjusting wrenches are removed from the tool before turning ON.
4. **KEEP WORK AREA CLEAN.** Cluttered areas and benches invite accidents.
5. **DON'T USE IN A DANGEROUS ENVIRONMENT.** Don't use power tools in damp or wet locations, or expose them to rain. Keep work area well lighted.
6. **KEEP CHILDREN AWAY.** All visitors should be kept at a safe distance from the work area.
7. **MAKE WORKSHOP KID-PROOF** with padlocks, master switches, or by removing starter keys.
8. **DON'T FORCE THE TOOL.** It will do the job better and safer at the rate for which it was designed.
9. **USE THE RIGHT TOOL.** Don't force the tool or the attachment to do a job for which it was not designed.
10. **USE PROPER EXTENSION CORD.** Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. An undersized cord will result in a drop in line voltage and loss of power which will cause the tool to overheat. The table on page 5 shows the correct size to use depending on cord length and nameplate ampere rating. If in doubt, use the next heavier gauge. The smaller the gauge number, the heavier the cord.

---

## GENERAL SAFETY INSTRUCTIONS

**BEFORE USING THE BAND SAW**

Safety is a combination of common sense, staying alert and knowing how to use your band saw.

### WARNING

To avoid mistakes that could cause serious injury, do not plug the band saw in until you have read and understood the following:

1. **READ** and become familiar with this entire instruction manual. LEARN the tool's applications, limitations, and possible hazards.
2. **KEEP GUARDS IN PLACE** and in working order.
3. **REMOVE ADJUSTING KEYS AND WRENCHES.** Form the habit of checking to see that keys and adjusting wrenches are removed from the tool before turning ON.
4. **KEEP WORK AREA CLEAN.** Cluttered areas and benches invite accidents.
5. **DON'T USE IN A DANGEROUS ENVIRONMENT.** Don't use power tools in damp or wet locations, or expose them to rain. Keep work area well lighted.
6. **KEEP CHILDREN AWAY.** All visitors should be kept at a safe distance from the work area.
7. **MAKE WORKSHOP KID-PROOF** with padlocks, master switches, or by removing starter keys.
8. **DON'T FORCE THE TOOL.** It will do the job better and safer at the rate for which it was designed.
9. **USE THE RIGHT TOOL.** Don't force the tool or the attachment to do a job for which it was not designed.
10. **USE PROPER EXTENSION CORD.** Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. An undersized cord will result in a drop in line voltage and loss of power which will cause the tool to overheat. The table on page 5 shows the correct size to use depending on cord length and nameplate ampere rating. If in doubt, use the next heavier gauge. The smaller the gauge number, the heavier the cord.

---

## SAFETY

11. **WEAR PROPER APPAREL.** Do NOT wear loose clothing, gloves, neckties, rings, bracelets, or other jewelry which may get caught in moving parts. Non-slip footwear is recommended. Wear protective hair covering to contain long hair.
12. **ALWAYS WEAR EYE PROTECTION.** Any band saw can throw foreign objects into the eyes which could cause permanent eye damage. ALWAYS wear Safety Goggles (not glasses) that comply with ANSI safety standard Z87.1. Everyday eyeglasses have only impact-resistant lenses. They ARE NOT safety glasses. Safety Goggles are available at Sears. NOTE: Glasses or goggles not in compliance with ANSI Z87.1 could seriously hurt you when they break.
13. **WEAR A FACE MASK OR DUST MASK.** Sawing and sanding operations produce dust.
14. **SECURE WORK.** Use clamps or a vise to hold work when practical. It's safer than using your hand and it frees both hands to operate tool.
15. **DISCONNECT TOOLS before servicing, and when changing accessories, such as blades, bits, cutters, and the like.**
16. **REDUCE THE RISK OF UNINTENTIONAL STARTING.** Make sure the switch is in OFF position before plugging in.
17. **USE RECOMMENDED ACCESSORIES.** Consult the owner's manual for the recommended accessories. The use of improper accessories may cause risk of injury to persons.
18. **NEVER STAND ON TOOL.** Serious injury could occur if the tool is tipped or if the cutting tool is unintentionally contacted.
19. **CHECK FOR DAMAGED PARTS.** Before further use of the tool, a guard or other part that is damaged should be carefully checked to determine that it will operate properly and perform its intended function. Check for alignment of moving parts, binding of moving parts, breakage of parts, mounting, and any other conditions that may affect its operation. A guard or other part that is damaged should be properly repaired or replaced.

---

**SAVE THESE INSTRUCTIONS**
PECIFIC SAFETY INSTRUCTIONS

10. **NEVER LEAVE TOOL RUNNING UNATTENDED. TURN THE POWER OFF.** Don’t leave the tool until it comes to a complete stop.

11. **DON’T OVERREACH.** Keep proper footing and balance at all times.

12. **MAINTAIN TOOLS WITH CARE.** Keep tools sharp and clean for best and safest performance. Follow instructions for lubricating and changing accessories.

13. **DO NOT USE tools in the presence of flammable liquids or gases.**

14. **DO NOT operate the tool if you are under the influence of any drugs, alcohol or medication that could affect your ability to use the tool properly.**

15. **ALWAYS OPERATE the band saw in a well-ventilated area and provide for proper dust removal. Use dust collection systems whenever possible. Dust generated from certain materials can be hazardous to your health.**

16. **SPECIFIC SAFETY INSTRUCTIONS**

- **TO AVOID INJURY from unexpected movement,** make sure the saw is on a firm, level surface, properly secured. To childproof the workshop, shut off the power at the master switches and remove the switch key from the wall. Store it in a safe place, away from children.

- **USE the correct size and style of blade.**

- **MAKE SURE the blade teeth point down and towards the table.**

- **BLADE GUIDES, SUPPORT BEARINGS, AND BLADE TENSION** must be properly adjusted to avoid accidental blade contact and to minimize blade breakage. To maximize blade support, always adjust the upper blade guide and blade guard so that it is 1/8 inch above the workpiece.

- **TABLE LOCK HANDLE** should be tight.

- **USE EXTRA CAUTION with large, very small or awkward workpieces.**

- **USE EXTRA SUPPORTS to prevent workpieces from sliding off the table top.** Never use another person in place of a table extension, or to provide additional support for the workpiece.

0. **WORKPIECES** must be secured so they don’t twist, rock, or slip while being cut.

11. **PLAN intricate and small work carefully to avoid pinching the blade.** Avoid awkward operation and hand positions to prevent accidental contact with the blade.

12. **SMALL PIECES** should be secured with jigs or fixtures. Do not hand hold pieces that are so small your fingers are under the blade guard.

13. **SUPPORT round work properly** (with a V-block or clamped to the miter gauge) to prevent it from rolling and the blade from biting.

14. **UT only one workpiece at a time.** Make sure the table is clean of everything except the workpiece and its guides before you turn the saw on.

15. **MAKE RELIEF CUTS when cutting long curves.**

16. **ALWAYS WATCH the saw run before each use.** If there is excessive vibration or unusual noise, stop immediately. Turn the saw off. Unplug it immediately. Do not start the saw again until the problem has been located and corrected.

17. **TO FREE any jammed material, turn the switch OFF.** Remove the switch key and unplug the saw. Wait for all moving parts to stop before removing jammed material.

18. **DON’T LEAVE the work area until all moving parts are stopped.** To childproof the workshop, shut off the power to master switches and remove the switch key from the band saw. Store it in a safe place, away from children. For your own safety, read the entire instruction manual before operating the band saw.

- **Wear eye protection.**

- **Do not wear gloves, necktie, or loose clothing.**

- **Make sure the saw is on a firm level surface and properly secured.**

- **USE ONLY THE RECOMMENDED ACCESSORIES.**

- **USE EXTRA CAUTION with large, very small, or awkward workpieces.**

- **MAINTAIN proper adjustment of blade tension, blade guides, and thrust bearings.**

- **ADJUST upper guard to just clear workpiece.**

- **Hold workpiece firmly against table.**

**ELECTRICAL REQUIREMENTS**

- For your own safety, read the entire instruction manual before operating the band saw.

- **Use blade recommended at 2600 FPM or greater.**

- **USE THE CORRECT size and style of blade.**

- **USE ONLY THE RECOMMENDED ACCESSORIES.**

- **TURN the saw OFF and unplug the saw before moving it.**

- **USE the correct size and style of blade.**

- **MAKESURE the blade teeth point down and towards the table.**

- **BLADE GUIDES, SUPPORT BEARINGS, AND BLADE TENSION** must be properly adjusted to avoid accidental blade contact and to minimize blade breakage. To maximize blade support, always adjust the upper blade guide and blade guard so that it is 1/8 inch above the workpiece.

- **TABLE LOCK HANDLE** should be tight.

- **USE EXTRA CAUTION with large, very small or awkward workpieces.**

- **USE EXTRA SUPPORTS to prevent workpieces from sliding off the table top.** Never use another person in place of a table extension, or to provide additional support for the workpiece.

**SAFETY INSTRUCTIONS**

- TO AVOID INJURY from unexpected movement, make sure the saw is on a firm, level surface, properly secured to prevent rocking. Make sure there is adequate space to prevent slipping, walking, or sliding during operation.

- **TURN the saw OFF and unplug the saw before moving it.**

- **USE the correct size and style of blade.**

- **MAKESURE the blade teeth point down and towards the table.**

- **BLADE GUIDES, SUPPORT BEARINGS, AND BLADE TENSION** must be properly adjusted to avoid accidental blade contact and to minimize blade breakage. To maximize blade support, always adjust the upper blade guide and blade guard so that it is 1/8 inch above the workpiece.

- **TABLE LOCK HANDLE** should be tight.

- **USE EXTRA CAUTION with large, very small, or awkward workpieces.**

- **USE EXTRA SUPPORTS to prevent workpieces from sliding off the table top.** Never use another person in place of a table extension, or to provide additional support for the workpiece.

- **WORKPIECES** must be secured so they don’t twist, rock, or slip while being cut.

- **PLAN intricate and small work carefully to avoid pinching the blade.** Avoid awkward operation and hand positions to prevent accidental contact with the blade.

- **SMALL PIECES** should be secured with jigs or fixtures. Do not hand hold pieces that are so small your fingers are under the blade guard.

- **SUPPORT round work properly** (with a V-block or clamped to the miter gauge) to prevent it from rolling and the blade from biting.

- **UT only one workpiece at a time.** Make sure the table is clean of everything except the workpiece and its guides before you turn the saw on.

- **MAKE RELIEF CUTS when cutting long curves.**

- **ALWAYS WATCH the saw run before each use.** If there is excessive vibration or unusual noise, stop immediately. Turn the saw off. Unplug it immediately. Do not start the saw again until the problem has been located and corrected.

- **TO FREE any jammed material, turn the switch OFF.** Remove the switch key and unplug the saw. Wait for all moving parts to stop before removing jammed material.

- **DON’T LEAVE the work area until all moving parts are stopped.** To childproof the workshop, shut off the power to master switches and remove the switch key from the band saw. Store it in a safe place, away from children.

**GROUNDING INSTRUCTIONS**

- This tool must be grounded while in use to protect the operator from electrical shock.

- **IN THE EVENT OF A MALFUNCTION or BREAKDOWN,** grounding provides a path of least resistance for electric current and reduces the risk of electric shock. This tool is equipped with an electric cord that has an equipment grounding conductor and a grounding plug. The plug MUST be plugged into a matching receptacle that is properly installed and grounded in accordance with ALL local codes and ordinances.

- **DO NOT MODIFY THE PLUG PROVIDED.** If it will not fit the receptacle, have the proper receptacle installed by a qualified electrician.

**IMPROPER CONNECTION** of the equipment grounding conductor can result in risk of electric shock. The conductor with the green insulation (with or without yellow stripes) is the equipment grounding conductor. If repair or replacement of the electric cord or plug is necessary, DO NOT connect the equipment grounding conductor to a live terminal.

- **CHECK with a qualified electrician or service person if you do not completely understand the grounding instructions,** or if you are not sure the tool is properly grounded.

**USE ONLY 3-wire extension cords that have 3-prong grounding plugs and 3-pole receptacles that accept the tool’s plug. Repair or replace damaged or worn cord immediately.**

- Use a separate electrical circuit for your tools. This circuit must not be less than #12 wire and should be protected with a 15 Amp time lag fuse. Before connecting the motor to the power line, make sure the switch is in the OFF position and the electric current is rated the same as the current stamped on the motor nameplate. Running at a lower voltage will damage the motor. This tool is intended for use on a circuit that has a receptacle like the one illustrated in Figure A. Figure A shows a 3-prong electrical plug and receptacle that has a grounding conductor. If a properly grounded receptacle is not available, an adapter (Figure B) can be used to temporarily connect this plug to a 2-contact ungrounded receptacle. The temporary adapter should be installed by a qualified technician. The adapter (Figure B) has a rigid lug (when using 120 volts only) that MUST be connected to a permanent earth ground, such as a properly grounded receptacle box. The TEMPORARY ADAPTER SHOULD BE USED ONLY UNTIL A PROPERLY GROUNDED OUTLET CAN BE INSTALLED BY A QUALIFIED ELECTRICIAN. The Canadian Electrical Code prohibits the use of adapters.

**CAUTION:** In all cases, make certain the receptacle is properly grounded. If you are not sure you have a qualified electrician check the receptacle.

**WARNING: This band saw is for indoor use only. Do not expose to rain or use in damp locations.**

**GUIDELINES FOR EXTENSION CORDS**

**USE PROPER EXTENSION CORD.** Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. An undersized cord will result in a drop in line voltage and in loss of power which will cause the tool to overheat. The table below shows the correct size to use depending on cord length and nameplate ampere rating. If in doubt, use the next heavier gauge. The smaller the gauge number, the heavier the cord. **Be sure your extension cord is properly wired and in good condition. Always replace a damaged extension cord or have it repaired by a qualified person before using it.** Protect your extension cords from sharp objects, excess heat and damp or wet areas.

**WARNING: This band saw is for indoor use only. Do not expose to rain or use in damp locations.**

**INSTALLATION OF GROUNDING PLUGS.** The adapter (FIGURE B) has a rigid lug (when using 120 volts only) that MUST be connected to a permanent earth ground, such as a properly grounded receptacle box. The TEMPORARY ADAPTER SHOULD BE USED ONLY UNTIL A PROPERLY GROUNDED OUTLET CAN BE INSTALLED BY A QUALIFIED ELECTRICIAN. The Canadian Electrical Code prohibits the use of adapters.

**CAUTION:** In all cases, make certain the receptacle is properly grounded. If you are not sure you have a qualified electrician check the receptacle.
RECOMMENDED ACCESSORIES

Visit your Sears Hardware Department or see the craftsman Power and Hand Tool Catalog to purchase recommended accessories for this power tool.

WARNING
Do not modify the power tool or use accessories not recommended by Sears.

ITEM
Blade: 1/8", 1/4", 3/8", 1/2" wide, 9 1/2" long
Sandpaper belt: 1/2" wide, 9 1/2" long

WARNING
Use of improper accessories may cause hazards. Follow instructions that accompany accessories. Do not use any accessory unless you have completely read the instruction or owner's manual for that accessory.

UNPACKING AND CHECKING CONTENTS

WARNING
To avoid injury from unexpected starting, do not plug the power cord into a power source receptacle during unpacking and assembly. This cord must remain unplugged whenever you are assembling or adjusting the saw.

1. Carefully unpack the band saw and all its parts, and compare against the illustration on page 7.
2. Place the saw on a secure surface and examine it carefully.

WARNING
Although compact, this saw is heavy. To avoid back injury, get help whenever you have to lift the saw.

If any part is missing or damaged, do not plug the band saw in until the missing or damaged part is replaced, and assembly is complete.

KNOW YOUR BAND SAW

CRAFTSMAN BAND SAW TERMS

BLADE GUIDES - Support the blade and keep it from twisting during operation. Blade guides must be adjusted when the blade is changed or replaced.

BLADE TENSION KNOB - Controls the amount of blade tension when changing blades.

BLADE TRACKING KNOB - Adjusts the blade position so the blade always runs in the center of the wheel.

ON/OFF SWITCH - Has a built-in child safety lock. To lock the switch in the OFF position, remove the switch key from the switch.

SAWDUST PORT - Helps keep the machine free from sawdust. The sawdust port makes an excellent hook-up for a wet/dry vacuum.

TABLE LOCK KNOB - Locks the table in place.

TILT (BEVEL) SCALE - Shows the degree the table is tilted for bevel cutting.

UPPER GUIDE LOCK KNOB - Locks the upper slide. Use it after you adjust the upper guide assembly to make sure the upper blade guide just clears the workpiece before cutting. Upper guide lock knob must be tightened before the band saw is turned on.

WOODWORKING TERMS

BEVEL CUT - An angle cut made through the face of a workpiece

COMPOUND CUT - A simultaneous bevel and miter cut.

CROSSCUT - A cut made across the width of the workpiece.

RELIEF CUT - Removal of waste material by a cut from the outside edge, allowing easier cutting of intricate curves.

R.P.M. - Revolutions per minute. The number of turns completed by a spinning object in one minute.

SAW BLADE PATH - The area of the workpiece or table top directly in line with the travel of the blade or the part of the workpiece which will be cut.

SET - The distance between two adjacent saw blade teeth tips bent outward in opposite directions to each other. The farther apart the tips are, the greater the set.

TRAILING END - The workpiece end last cut by the blade.

WORKPIECE - The item being cut. The surfaces of a workpiece are commonly referred to as faces, ends, edges.

WORKTABLE - The surface on which the workpiece rests while performing a cutting or sanding operation.

GLOSSARY OF TERMS

HEEL - Misalignment of the blade.

KERF - The material removed by a blade in a through cut, or the slot produced by the blade in a non-through or partial cut.

LEADING EDGE - The end of the workpiece pushed into the cutting tool first.

MITER EDGE - An angle cut made across the width of a workpiece.

RESAW - A cutting operation to reduce the thickness of the workpiece to make thinner workpieces.

RESIN - A sticky sap that has hardened.

RIPPING CUT - A cutting operation along the length of the workpiece.

GUM - A sticky sap-based residue from wood products.
ASSEMBLY AND ADJUSTMENTS

ASSEMBLY INSTRUCTIONS

- Phillips screwdriver
- Combination square
- Adjustable wrench
- Straight edge
- Feeler gauge - size 0.02

ASSEMBLY INSTRUCTIONS

**WARNING**
Although compact, this saw is heavy. To avoid injury, get help to lift the saw.

ASSEMBLE BAND SAW TO LEG STAND (FIG. B)

1. Lift the saw body (1) and place on the leg stand (2), aligning with the four mounting holes (3).
2. Attach the band saw to the stand with four long hex head bolts (4, 5) with flat washers (6) into the threaded holes, through the bracket and saw body.
3. Open the lower wheel cover (5).
4. Thread a hex bolt (2) in the lower wheel.
5. Close the wheel cover.
6. Thread a nut (7) onto the table stop bolt (8) and screw both into the rear tab (9) on the trunnion support bracket.

**ASSEMBLE THE TABLE**

Mounting the trunnion support bracket (FIG. C)
1. Place the trunnion support bracket (1) on the saw body, as shown.
2. Insert two long hex head bolts (2, 3) with flat washers (4) into the threaded holes, through the bracket and saw body.
3. Open the lower wheel cover (5).
4. Thread a hex bolt (2) in the lower wheel.
5. Close the wheel cover.
6. Thread a bolt (7) onto the table stop bolt (8) and screw both into the rear tab (9) on the trunnion support bracket.

**FIG. C**

Mounting the table (FIG. D, E)
7. Remove the table insert (10) and table aligning pin (11) from the table (12).
8. Guide the table slot (13) over the saw blade and rotate a 1/4 turn, so the slot is perpendicular to the blade.

**FIG. D**

ASSEMBLE THE SAWDUST COLLECTION PORT (FIG. C-1)
1. Slide the hook (1) on the port assembly into the square hole (2) located on the bandsaw housing, below the lower blade guides.
2. Push the flat plate of the port against the outside of the band saw to align the holes (3).
3. Place a washer (5) on the screw (4), insert and tighten.

**NOTE:** When operating the band saw, for best sawdust exhaust attach a dust collection or vacuum hose.

**FIG. E**
INSTALLING AND REMOVING BLADES (FIG F)

**WARNING**
To avoid injury from accidental starting, always turn the switch off and replace the plug from the power source before moving, replacing, or adjusting the blade.

**Removing**
1. Loosen the blade tension by turning the blade tension knob (1) counterclockwise.
2. Remove the table insert (2) and the table aligning pin (3) from the table.
3. Pull the cover knobs to open the upper and lower wheel cover doors (4).
4. Loosen the two phillips screws (5) and remove the blade guides (6).
5. Remove the blade (7) from the blade guides (8).
6. Carefully pull the blade from the side slot (9) and from the wheels (10).
7. Swing the left side of the blade toward you, turning the blade so it will fit through the slot (11) in the table, and remove.

**FIG. F**

**Installing**
1. Make sure the blade tension knob (1) is turned counterclockwise until it stops.
2. Remove the table insert (2) and the table aligning pin from the table.
3. Open the upper and lower wheel cover doors (4).
4. Loosen and remove the blade guard (8).
5. Guide the new blade (7) through the table slot (11), making sure the blade teeth are pointing forward and down.

**NOTE:** To avoid lifting the workpiece, the blade teeth must point downward toward the table.
6. Swing the left side away and back, place the blade on the upper and lower wheels (10).
7. Place the blade carefully between the upper and lower blade guides (6).
8. Slide the blade into the slot (9) at the left of the wheels, and make sure the blade is positioned at the middle of the wheels.
9. Turning the blade tension knob clockwise, tighten the tension until the blade is tight on the wheels.
10. Replace the table insert and the table aligning pin.
11. Adjust the blade tracking and tension properly (See ADJUSTMENT INSTRUCTIONS section) before operating the band saw.

**ADJUSTING THE 90° TABLE STOP (FIG. J)**

**WARNING**
To avoid injury, turn the switch OFF and unplug the band saw from the power source before making any adjustments.

**TILTING THE TABLE (FIG. I)**

1. Loosen both table lock knobs (2) underneath the table.
2. Tighten the two table lock knobs.
3. Tighten the two table lock knobs.

**NOTE:** The 90° table stop bolt must be lowered to tilt the table 10° to the left.

**FIG. I**

**FIG. J**

**ADJUSTMENT INSTRUCTIONS**

**WARNING**
To avoid injury, turn the switch OFF and unplug the band saw from the power source before making any adjustments.

**TILTING THE TABLE (FIG. I)**

1. Loosen both table lock knobs (2) underneath the table.
2. Tighten the two table lock knobs.
3. Tighten the two table lock knobs.

**NOTE:** The 90° table stop bolt must be lowered to tilt the table 10° to the left.

**FIG. I**

**FIG. J**
ILADE TENSION (FIG. K, K-I)

**WARNING**
Avoid injury, turn the switch OFF and disconnect the saw from the power source before making any adjustments. NEVER make tension adjustments with the machine running.

1. Loosen the butterfly nut (6) and the rolled nut (7) located on the back of the band saw, under the blade tracking knob (5). (FIG. K-I)
2. The upper wheel (1) is spring loaded. Adjust the blade tension by raising or lowering the upper wheel. (FIG. K)
3. Turn the blade tension knob (2) clockwise to raise the wheel and tighten the blade, counterclockwise to lower the wheel and loosen the tension.

As you become familiar with the saw, you may want to change the tension settings.

Complete the blade tracking adjustments before operating the band saw.

NOTE: Changes in blade width and type of material being cut will have an effect on the blade tension. Too much or too little tension could break the blade. When the band saw is not in use, relax the blade tension.

---

ILADE TRACKING (FIG. K-1, L)

**WARNING**
Avoid injury, turn the switch OFF and disconnect the saw from the power source before making any adjustments. NEVER make tracking adjustments with the machine running.

1. Open the upper cover. (FIG. L)
2. Move the blade guides (2) and support bearings (3) away from the blade, if necessary.
3. Rotate the wheel (4) slowly forward by hand, and check the position of the blade on the wheel. The blade should remain centered on the wheel as it turns.

---

UPPER BLADE GUIDE ASSEMBLY (FIG. M)

**WARNING**
To avoid injury, turn the switch OFF and disconnect the saw from the power source before making any adjustments. NEVER make adjustments with the machine running.

1. Loosen the lock knob (1) and move the blade guide assembly (2) up or down to 1/8" above the workpiece.
2. Tighten the lock knob.

---

UPPER BLADE GUIDES AND BLADE SUPPORT BEARING (FIG. N, O)

**WARNING**
The blade guard has been removed for clarity of illustration. To avoid injury never operate the band saw without all guards in place and in working order.

**WARNING**
To avoid injury, turn the switch OFF and disconnect the saw from the power source before making any adjustments. NEVER make adjustments with the machine running.

NOTE: Make sure the blade is tensioned and tracking properly. Adjust the blade guides and support bearing after each blade tension and tracking adjustment. When the upper blade guides and support bearings are adjusted, the lower guides and bearings should also be adjusted.

**Blade guides (FIG. N)**
1. Make sure the blade is tensioned and tracking properly.
2. Loosen the front set screws (1) with a hex wrench.
3. Move the guides (2) as close to the blade (3) as possible without pinching it.
4. Using a feeler gauge, make sure the space between each guide and the blade measures 0.02" (the thickness of a dollar bill.)
LOWER BLADE GUIDES AND SUPPORT BEARING

**WARNING**

To avoid injury, turn the switch OFF and disconnect the saw from the power source before making any adjustments. NEVER make adjustments with the machine running.

**NOTE:** Make sure the blade is tensioned and tracking properly.

**NOTE:** The lower blade guides and support bearings should always be adjusted after the blade is tensioned, the tracking is adjusted, and the upper blade guides and upper support bearings are properly adjusted.

**Blade guides (FIG. P)**

1. Loosen both front set screws (1) with a hex wrench.
2. Move the guide (2) as close to the sides of the blade (3) as possible without pinching it.
3. Using the feeler gauge, measure the spaces between the guide and the blade. Adjust to 0.02".
4. Tighten the hex screws.
5. Loosen the side set screw (4). Move the guide support bracket (5) in or out until the guides are at least 1/32" behind the saw teeth. Tighten the screw.

**PULLEY ALIGNMENT (FIG. R, S)**

This alignment is adjusted at the factory and should not need to be readjusted. However, if there are belt tracking problems do the following:

1. Pull the cover knobs to open the wheel covers. (FIG. R)
2. Loosen and remove the lower blade wheel hex head bolt (1) and flange (2) with an adjustable wrench.
3. Loosen the blade tension by turning the blade tension knob (3) counterclockwise, following the steps in "Blade Tension".
4. Remove the saw blade (4) from the lower blade wheel (5).
5. Remove the lower blade wheel from its shaft.
6. Loosen the bearing set screw (6) with the hex wrench.
7. Move the blade support bearing shaft (7) in or out until the support bearing (8) is 1/64" behind the saw blade.
8. Tighten the bearing set screw.
9. The blade support bearing should be adjusted so the vertical back edge of the blade (3) overlaps the front face of the support bearing approximately 1/16 to 1/8".
10. Remove the v-belt (6) from the motor pulley (7).
11. Place a straight edge in the front groove of both pulleys.
12. If the side edges of the pulleys are not aligned, loosen the motor pulley hex socket screw (6).
13. Adjust the motor pulley to or out on the motor shaft to align the side edges of both pulleys.
14. When aligned, tighten the hex socket screw.
15. Place the v-belt on the motor pulley and saw pulley. Check the belt tension and adjust.
16. Move the idle wheel (9) to press the v-belt, by turning the handle (10).
17. Replace the blade wheel and blade.

**BELT TENSION (FIG. T)**

The belt tension may need adjusting if the belt is replaced (See MAINTENANCE Section), or the blade speed is changed (See OPERATION Section).

1. Loosen the idle wheel by turning the idle wheel handle.
2. Loosen the motor mount nuts (1) and slide the motor (2) sideways to increase or decrease the belt tension.
3. The belt tension is correct when there is a 1/2" deflection if the belt is pressed in the center between pulleys.
4. When positioned properly, tighten the motor mount nuts.
5. Tighten the idle wheel handle to press the idle wheel against the V-belt.

**NOTE:** Do not overtighten the motor mount nuts, tighten just enough to maintain the belt tension.
3 BASIC SAW OPERATIONS

ON/OFF SWITCH (FIG. U)

- The switch is intended to prevent unauthorized use of the band saw.
- To turn the band saw on, insert the yellow key (1) into the switch.
- Push the key firmly into the slot, then push switch to the ON position to start the band saw.
- To turn the band saw OFF, push the switch to the down position.
- Remove the yellow switch key when the saw has come to a complete stop, by gently pulling it outward.

A WARNING

Remove the switch key whenever the saw is not in use. Place it in a safe place and out of reach of children.

3 GENERAL CUTTING

CAUTION: Blade teeth are sharp. Use care when handling a saw blade.

For longest wear and best cutting results, use the correct blade thickness, width, and temper for the type of material you will cut.

When sawing small curves and delicate work, use narrow blades. Otherwise, use the widest blade possible. See FIG. V.

For cutting wood and similar materials with this band saw, use blades 90° long in widths up to 1/2".

Do not cut ferrous metals with this band saw.

CAUTION: When cutting nonferrous metals, metal shavings can react with wood dust and start a fire. To avoid this:

1. Disconnect any dust collecting hose from the band saw.
2. Remove all traces of wood dust from inside the saw.
3. Remove all metal shavings from inside the saw before sawing wood again.

THE SANDPAPER BELT

NOTE: A sandpaper belt sands very rapidly. Practice with some scraps of wood before you try to sand your workpiece with the band saw.

NOTE: Read the instruction manual carefully for "BLADE GUIDES AND SUPPORT BEARINGS", "BLADE TENSION" AND "BLADE TRACKING".

1. Open the wheel covers and loosen the blade tension.
2. Remove the blade, table insert, and blade guard.
3. Loosen the side set screws on the upper blade support bearing and blade guides, and push them back as far as they will go. Tighten the set screws.
4. Do the same on the lower blade support bearing and blade guides.
5. Install the sanding belt and adjust the tension carefully.
6. Rotate the upper wheel by hand to check the sanding belt tracking, and adjust if necessary.
7. Close the wheel covers.

NOTE: A new sanding belt will stretch with use, check the tension and tracking often.

BLADE SELECTION (FIG. W)

CAUTION: To avoid possible injury or damage, NEVER use this band saw to cut ferrous metals.

For cutting wood and similar materials with this bandsaw, use blades 90° long in widths up to 1/2".

For longest wear and best cutting results, use the correct blade thickness, width, and temper for the type of material you will cut.

When sawing small curves and delicate work, use narrow blades. Otherwise, use the widest blade possible. See FIG. V.

For cutting wood and similar materials with this band saw, use blades 90° long in widths up to 1/2".

Do not cut ferrous metals with this band saw.

A WARNING

Common causes of blade breakage:
- Poor guide alignment and adjustment.
- Forcing or twisting a wide blade around a short radius.
- Feeding too fast.
- Dull teeth or not enough set.
- Too much blade tension.
- Setting top guide assembly too high above the workpiece.
- Lumpy or improperly finished brazes or welds on the blade.
- Continuous running of blade when not cutting.

BLADE SPEED SELECTION (FIG. X)

This band saw has two speed settings:
1. 2600 F.P.M., for normal operation.
2. 1410 F.P.M., for operation requiring more control.

A WARNING

To avoid possible injury or damage, NEVER use this band saw to cut ferrous metals.

CAUTION: When cutting nonferrous metals, metal shavings can react with wood dust and start a fire. To avoid this:

1. Disconnect any dust collecting hose from the band saw.
2. Remove all traces of wood dust from inside the saw.
3. Remove all metal shavings from inside the saw before sawing wood again.

THE SANDPAPER BELT

NOTE: A sandpaper belt sands very rapidly. Practice with some scraps of wood before you try to sand your workpiece with the band saw.

NOTE: Read the instruction manual carefully for "BLADE GUIDES AND SUPPORT BEARINGS", "BLADE TENSION" AND "BLADE TRACKING".

1. Open the wheel covers and loosen the blade tension.
2. Remove the blade, table insert, and blade guard.
3. Loosen the side set screws on the upper blade support bearing and blade guides, and push them back as far as they will go. Tighten the set screws.
4. Do the same on the lower blade support bearing and blade guides.
5. Install the sanding belt and adjust the tension carefully.
6. Rotate the upper wheel by hand to check the sanding belt tracking, and adjust if necessary.
7. Close the wheel covers.

NOTE: A new sanding belt will stretch with use, check the tension and tracking often.

3 GENERAL CUTTING

A WARNING

For your safety, read and understand all GENERAL and SPECIFIC SAFETY INSTRUCTIONS on pages 3 - 5 before using the band saw.

Operating band saws involves a certain amount of hazard. Before attempting regular work, use scrap lumber to check the settings, and to get the feel of operating the band saw. Read instructions and plan your work before cutting a workpiece.

Do not turn the power ON until after you have made all adjustments, checked that the guard is in place, and turned the wheel by hand to make sure all parts work properly. Always keep the guide assembly close to your work, 1/8" above the workpiece.

Do not force the workpiece against the blade. Light contact permits easier cutting and prevents unwanted friction and wearing of the blade.

Sharp saw blades need little pressure for cutting. Steadily move the workpiece against the blade without forcing it.

To avoid twisting the blade, do not turn sharp corners or saw around corners.

A band saw is basically a "curve-cutting" saw. It is not capable of doing intricate inside cutting as can be done with a scroll saw.

It is also used for straight line operations such as crosscutting, ripping, mitering, beveling, compound cutting, and resawing.

A WARNING

To avoid blade breakage, fire or other damage or injury, NEVER use this band saw to cut ferrous metals.

FIG. U

FIG. V

FIG. W

FIG. X
**WARNING**

Avoid injury. Turn the switch OFF and disconnect the saw from the power source before making any adjustments. NEVER make adjustments with the machine running.

Loosen the idle wheel (6) (FIG. Y-1) by turning the idle wheel handle (7). FIG. Y
Loosen the four motor nuts and slide the motor to loosen the V-belt tension.
Open the lower wheel cover and reposition the V-belt (3).

A. Changing the speed from 1410 to 2600 FPM:
Remove the belt (3) from the band saw pulley (4) first, and reposition in the saw pulley groove (1). Next, remove the belt from the motor pulley (5) and reposition in the motor pulley groove (1).

B. Changing the speed from 2600 to 1410 FPM:
Remove the belt (3) from the motor pulley (5) first, and reposition in the motor pulley groove (2). Next, remove the belt from the saw pulley (4) and reposition in the saw pulley groove (2).

Slide the motor on the motor mounts to reapply tension to the V-belt, and tighten the four nuts.

Turn the idle wheel handle (7) to press the idle wheel (6) against the V-belt. Close the wheel cover.

**NOTE:** After readjusting belt position and belt tension, check and readjust the settings for the blade tension and clamping, guides and bearings. (See ADJUSTMENT Section.)

**GENERAL MAINTENANCE**

**A WARNING**

For your own safety, turn switch OFF and remove the plug from power source receptacle before maintaining, cleaning, adjusting, or lubricating your band saw.

**A WARNING**

To avoid fire or toxic reaction, never use gasoline, naphtha, acetone, lacquer thinner or similar highly volatile solvents to clean the band saw.

**A WARNING**

To avoid eye injury from blowing debris, wear safety goggles when blowing out sawdust.

**BAND SAW**

Sawdust will accumulate under the table and base. This could cause difficulty in the movement of the table when setting up a band saw cut, and also cause a fire hazard. Frequently blow out or vacuum up the sawdust.

Keep your band saw clean. Remove the sawdust from the inside. Vacuum or blow out frequently.

**NOTE:** Put a thin coat of paste wax on the table so that the wood slides easily while cutting.

Do not allow filth to build up on the table, the guides, or the support bearings. Clean them with Craftsman Gum and Pitch Remover.

**NOTE:** Do not immerse the support bearings in the gum and pitch remover.

**BLADE WHEEL TIRES**

Pitch and sawdust that build up on the tires should be removed with a stiff brush or scraped off with a piece of wood.

**NOTE:** To avoid damaging the tires do not use a sharp knife or any kind of solvent. When the tires become worn they should be replaced. When replacing the tires, stretch them around the wheels but do not glue them on.

**MOTOR**

Frequently blow or vacuum out any sawdust from the motor. Follow lubrication instruction on the motor label.

**LUBRICATION**

All of the bearings are packed with grease at the factory. They require no further lubrication.

**CAUTION:** Never put lubricants on the blade while it is spinning.

**CHANGING BELTS**

1. Pull the cover knobs to open the wheel covers.
2. Loosen the idle wheel by turning the idle wheel handle.
3. Loosen the motor mount nuts and slide the motor sideways to loosen the belt tension.
4. Remove the belt from the motor pulley and saw pulley.

**NOTE:** The blade wheel may need to be removed for easy access to the pulley belt (See ADJUSTMENT Section).

5. Place the new belt on the motor pulley and saw pulley according to the speed desired (See OPERATION Section).
6. Slide the motor to the side to properly tension the belt, and tighten the motor mount nuts. Do not overtighten.

**NOTE:** The belt is properly tensioned if there is 1/2" flex when the belt is pressed in the center between pulleys.

7. Turn the idle wheel handle to press the idle wheel against the belt.
8. Push the cover doors closed before using the band saw.
## TROUBLESHOOTING GUIDE

### CRAFTSMAN 12" BAND SAW

#### WARNING
To avoid injury from an accidental start, turn the switch OFF and always remove the plug from the power source before making any adjustments.

#### WARNING
All electrical or mechanical repairs should be done only by qualified service technicians. Contact the nearest Sears Service Center.

### GENERAL

<table>
<thead>
<tr>
<th>Problem</th>
<th>Probable Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blade does not run in the center of the upper wheel.</td>
<td>1. Not tracking properly. 2. Defective blade.</td>
<td>1. Adjust tracking. See ASSEMBLY AND ADJUSTMENTS section &quot;BLADE TRACKING&quot;. 2. Replace blade.</td>
</tr>
<tr>
<td>Band saw slows down when cutting.</td>
<td>1. Belt too loose. 2. Cutting too small a radius. 3. Dull blade. 4. Overloading motor.</td>
<td>1. Adjust belt tension. See ASSEMBLY AND ADJUSTMENTS section &quot;BLADE TENSION&quot;. 2. Stop feeding, back up the material slightly, until the band saw speeds up. 3. Replace blade. 4. Slow down, you are trying to cut too fast. See &quot;MOTOR TROUBLESHOOTING GUIDE&quot;.</td>
</tr>
<tr>
<td>Blades braking.</td>
<td>1. Too much tension on the blade. 2. Kink in the blade caused by cutting too small a radius or turning the material too fast when cutting.</td>
<td>1. Adjust tension. See ASSEMBLY AND ADJUSTMENTS section &quot;BLADE TENSION&quot;. 2. Use correct cutting technique. See OPERATION section &quot;GENERAL CUTTING&quot;.</td>
</tr>
<tr>
<td>Blade dulls too quickly.</td>
<td>1. Blade guides set too close to the teeth. 2. Cutting incorrect material.</td>
<td>1. Adjust upper and lower blade guides. 2. See OPERATION section &quot;BLADE SELECTION&quot;.</td>
</tr>
<tr>
<td>Band saw vibrates.</td>
<td>1. Too much tension on motor belt.</td>
<td>1. Adjust according to ASSEMBLY AND ADJUSTMENTS section, &quot;INSTALL THE BELT&quot;.</td>
