Important Safety Instructions

WARNING: Please follow basic precautions, including the following:

Read all instructions before using your dishwasher.

ONLY use detergents and rinse agents recommended for use in a dishwasher.

Store detergents and rinse agents in a cool, dry place OUT OF CHILDREN’S REACH.

DO NOT tamper with controls.

DO NOT operate dishwasher unless all enclosure panels are properly in place.

ALWAYS disconnect electrical power to dishwasher before attempting to service it. We recommend having a qualified technician service your appliance.

DO NOT wash plastic items unless marked “Dishwasher Safe” or equivalent. If unmarked, check manufacturer’s recommendations.

This dishwasher must be properly installed in accordance with the Installation Instructions before it is used.

TO AVOID RISK OF ELECTRICAL SHOCK, the dishwasher must be electrically grounded before it is operated.

DO NOT touch heating element during or immediately after use. Allow time to cool.

Load sharp or pointed tableware with handles up (points down) to avoid injury when reaching into dishwasher.

DO NOT sit on or abuse dishwasher door or dishracks.

DO NOT allow children to play in or on dishwasher.

When discarding old dishwasher, BE SURE to remove door to prevent accidental entrapment.

DO NOT install the dishwasher on carpeted floor.

WARNING: Under certain conditions, hydrogen gas may build up in a hot water system that has not been used for two weeks or more. HYDROGEN GAS IS EXPLOSIVE. To prevent injury or damage, before using dishwasher, turn on all hot water faucets and allow water to run for several minutes. This will allow gases to escape. As the gas is flammable, DO NOT smoke or use an open flame or appliance near faucets while they are open.

NOTE: Do not store or use combustible materials, gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

What Your Dishwasher Needs To Do Its Job

Hot Water

To get dishes clean and dry you need hot water. To help you get water of the proper temperature, your dishwasher automatically heats the water in the wash cycle. Higher water temperature is needed to dissolve grease and activate powder detergents. For good washing and drying, the entering water must be at least 120°F. To prevent dish damage, inlet water should not exceed 150°F.

- Check your water temperature with a candy or meat thermometer.
  - Turn on the hot water faucet nearest the dishwasher. Put the thermometer in a glass and let the water run continuously into the glass until the temperature stops. If the water temperature is below 120°F, adjust your water heater.
- Do not operate the dishwasher during or right after other heavy use of hot water, such as for laundry or bathing.

Water Pressure

Water supply pressure must be between 15 and 120 pounds per square inch. To determine if you have enough pressure, put a 1 quart container under a fully opened hot water faucet nearest the dishwasher. If the container fills in less than 9 seconds, water pressure is within an acceptable range. Be sure all other faucets are turned off during this test.

Water Conditions

In areas where water is very hard (12 grains or more), it may be necessary to install a water softener to assure proper performance from your dishwasher. If you do not know the hardness of your water supply, contact your local water department or bring a sample into your Sears store for testing.

Detergents

Only use detergents labeled for use in automatic dishwashers. NEVER use laundry detergents, liquid soaps or other household cleaners in your dishwasher. Some detergents will be more effective with your water conditions than others. Store detergent in a cool, dry place.

Rinse Agents

Rinse agents make water flow off dishes quicker than usual. This lessens water spotting and makes drying faster, too.
## Starting Your Dishwasher

1. Load the dishwasher (see pages 6 and 7).
2. Add detergent (see page 9).
3. Close the door but **do not latch** it.
4. If dishwasher drains into a food waste disposer, operate disposer until it is empty.
5. Turn on hot water faucet nearest dishwasher and let it run until the water is hot.
6. Push selector button for desired cycle.
7. Slowly turn the Cycle Indicator Dial to **START**. Then latch the door to start the dishwasher.

## Select the Cycle

<table>
<thead>
<tr>
<th>Cycle</th>
<th>Description</th>
<th>Cycle Time</th>
<th>Water Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>POTS PANS</td>
<td>For heavily soiled dishes and pots and pans</td>
<td>Approx 91 minutes</td>
<td>Approx 12.1 gallons</td>
</tr>
<tr>
<td>NORMAL WASH</td>
<td>For normally soiled dishes</td>
<td>Approx 76 minutes</td>
<td>Approx 12.1 gallons</td>
</tr>
<tr>
<td>LIGHT WASH</td>
<td>For pre-rinsed or lightly soiled dishes and dishes that have been stored</td>
<td>Approx 66 minutes</td>
<td>Approx 8.7 gallons</td>
</tr>
<tr>
<td>RINSE &amp; HOLD</td>
<td>For rinsing dishes that will be washed later <strong>DO NOT USE DETERGENT.</strong></td>
<td>Approx 10 minutes</td>
<td>Approx 3.7 gallons</td>
</tr>
</tbody>
</table>

*The cycle length may be extended up to 21 minutes automatically heating the water to the proper temperature.*
Select Options

**HOT DRY Cycle**
Turns the drying heater on for fast drying

**AIR DRY Cycle (no-heat drying)**
Turns the drying heater off to save energy. Dishes dry naturally over a longer period such as overnight. If you need your dishes sooner, open the dishwasher door after the cycle is complete to reduce the natural drying time. Use of this option reduces the electrical energy used by this model approximately 9% for NORMAL WASH cycle.

Normal Sights and Sounds

- You’ll hear occasional sounds while your dishwasher is running:
  - Soft food disposer shredding action.
  - Drain valve opening to pump water out
  - Timer control as cycle progresses.
  - Detergent cup opening.
  - Pump motor starting.
- The motor stops during drying.
- You’ll see water vapor coming through the vents by the door latch during drying and when water is being pumped out.

How to Add a Dish During a Cycle

- Add dishes any time during a RINSE & HOLD cycle.
- With other wash cycles, you can add dishes at any time BEFORE the main detergent wash portion of the cycle.
- Here’s how to add a forgotten dish:
  1. Push door latch to the left. Washing will stop.
  2. Wait a few seconds until the water calms. Then open the door.
  3. Add dishes you’ve forgotten.

Energy and Water Saving Tips

- Wash full loads.
- Use your dishwasher during off-peak hours.
- Use the LIGHT WASH cycle whenever possible.
- Select AIR DRY drying option when you don’t need dry dishes in a hurry.
- Don’t pre-rinse normally soiled dishes.
- Load correctly to ensure good washing action.

Preparing Dishes for Washing

- Pre-rinsing of normal food soil is not necessary.
- Scrape off bones, seeds, skins, toothpicks and other hard soils.
- Remove hard shelled vegetables, meat trimmings, leafy vegetables, and excessive amounts of oil or grease.
- Remove foods with high acid content—they can discolor stainless steel.
- Remove large quantities of any food.
- When using the POTS PANS cycle, less preparation is required. This cycle can wash heavily-soiled dishes and remove dried-on and baked on soils from pots, pans and casseroles. However, items with burned-on soils may not come clean.
Proper Loading

This is a random mixed load, the most common type you will have.

Make sure dishes are properly loaded to insure that water can reach the soiled surfaces. The wash arm in the bottom sprays water up. The tower that rises in the center sends water out over the dishes to wash the items in the upper rack. A spray arm in the top washes down. Make sure to place tall items to the outside so the upper wash arm is not blocked.

Upper Rack

The top rack is best for glasses, cups and saucers. Cups and glasses fit best along the sides. This is the place for dishwasher-safe plastics, too. Make sure small plastic items are lodged in tightly so they can’t fall onto the heating element. Arrange stemware so that it cannot move easily. Don’t let the glasses touch each other.

WATCH OUT FOR THIS

The wash tower rises through the center of the bottom rack during the wash and rinse portions of the cycle. Don’t block it or load tall things next to it. Also, be careful not to let a portion of an item such as a pot or dish handle extend through the bottom rack. This could block the wash arm and cause poor washing results.

Sauce pans, mixing bowls and other small items may be placed—face down—in the top rack. The top rack is handy for all kinds of odd shapes.
**Lower Rack**

Fit plates and saucers between the pins. Place items so that water and detergent from wash arm can reach soiled surfaces.

Load platters, pots, pans and bowls along the sides, in corners or in the back. All large items, such as pitchers, salad bowls, and mixing bowls, should be washed in the lower rack.

Put flatware in the removable basket with handles up to protect your hands. Mix knives, forks and spoons so they don’t nest together. Distribute evenly. Small plastic items, such as measuring spoons and lids from small containers are not recommended for automatic dishwashing. If placed in the dishwasher, they should go in bottom of the silverware basket with silverware on top.

**Precaution!**

Take out anything that may fall or extend through the bottom of the basket.
Special Tips On Dishwasher Use

Most utensils and dishware can be safely washed in your dishwasher. However, some materials may require special handling.

**Aluminum:** Some darkening may take place. Colored aluminum may fade. Do not place aluminum items directly in front of detergent cups where contact with undissolved detergent could cause pitting, spotting or discoloration.

**Cast Iron:** Cast iron utensils should be handwashed.

**China:** Antique, hand-painted china and those with gold or platinum rings should be handwashed.

**Crystal:** Load carefully in upper rack only. To prevent chipping, items should not touch. Handwash delicate items. Select Power Miser drying option to air-dry crystal items.

**Flatware:** Sterling, silverplate and stainless steel are normally dishwasher safe. Flatware with dark decorative shading and/or non-metallic handles should be handwashed.

**Pewter:** Pewter or pewter-like materials should be handwashed.

**Plastic:** Plastic items should be placed in upper rack only. Wash only those items marked "Dishwasher Safe."

**Wood:** Wood items should be handwashed.

**Glass:** Milk glass should be handwashed.

**Non-Stick Coatings:** After washing, wipe the non-stick coating area with vegetable oil to keep it from losing its non-stick quality.

**Non-Dishware Items:** DO NOT wash items such as electronic air cleaner filters, furnace filters and paint brushes in your dishwasher. Damage to dishwasher and discoloration or staining of dishwasher may result.
Detergent Dispenser

You'll find two detergent dispensers on the inside door of your dishwasher because some cycles use two washes.

Do not add detergent until you are ready to start the cycle. Use fresh detergent.

The dispenser will automatically release detergent at the correct times during the cycle.

Always close the main cup tightly. When it is firmly latched you will hear a clicking sound. It is not necessary to overtighten.

Close the main cup.

Note: To open the detergent cup after it has been closed, unlatch the door and rotate the Cycle Indicator Dial a full turn to the OFF position. When the closed cup contains soap it is best that the door be in a partially open position before rotating the Cycle Indictor Dial. This will help reduce the amount of detergent and rinse aid agent spillage into the tub.

Rinse Agent Dispenser

Rinse agents come in either liquid or solid form. Your dishwasher's dispenser uses the liquid form.

To fill the dispenser:

Unscrew the cap. Note the FULL line on the tip of the cap. Add the liquid rinse agent until it just reaches the top of the FULL line. Replace the cap. The dispenser automatically releases the rinse agent into the final rinse water.

The dispenser holds 4½ ounces. This should last about 3 months. Fill as needed, but do not overfill.
Important Parts of Your Dishwasher

Changing Color Panels

If you are redecorating, you can change your dishwasher's front panels to match or blend with your new colors.

The panels are held in place by the door trim and the trim on the panel below the door. Each side of each panel is a different color. Or you can paint the panels with the color of your own choice.

**WARNING:** To prevent electric shock, disconnect electrical power supply to dishwasher before changing panels.

**How to change door panel:**
1. Take out trim screws on either side of dishwasher door. Remove side trim.
2. Slide out insert panel.
3. Put the color you want in front (Careful—edges may be sharp.)
4. Replace insert panel, side trim and screws.

**How to change lower access panel:**
1. Remove panel attachment screws.
2. Remove entire panel.
3. Take out screws and remove top trim.
4. Slide out insert panel.
5. Put the color you want in front.
6. Replace insert panel, top trim and screws.
7. Replace entire panel and attachment screws.

**Do not operate dishwasher while changing panels or when lower access panel is removed.**

**Wood panel trim kit GPF40** contains trim and instructions for adding a decorative wood panel and lower access panel no thicker than 1/4" to match kitchen cabinets. This kit is available at no extra cost. (Specify GPF40.)

User Maintenance Instructions

Care of Surfaces

- Clean control panel with lightly dampened cloth. Dry thoroughly. Do not use abrasives or sharp objects—they could damage it.
- Clean outside cabinet finish with a good appliance polish wax. Do not use scouring pads, harsh or gritty cleaners.
- Interior is self-cleaning with normal use. If it should ever need cleaning, use a mild cleansing powder. If hard water causes lime build-up, clean as follows:
  - Pour 2 cups white vinegar into empty dishwasher. Do not use detergent
  - Operate machine on Normal Wash cycle.

Care of Air Gap

If an air gap was installed for your built-in dishwasher, check to make sure it is clean. Air gaps are usually mounted on the countertop and can be inspected by removing the cover. The air gap is not part of your dishwasher and is not covered by Sears warranty.

Protection against Freezing

If dishwasher is left in an unheated place during the winter...

- Shut off water and electrical power.
- Remove access panel.
- Disconnect water lines from valve. Drain into a flat pan.
- Drain collection chamber at rear of unit below filter by disconnecting hose to pump.
- Remove plastic pump cover in tub bottom and use sponge to soak up any remaining water
- Reconnect water lines to valve and hoses to pump.

Preparation for Moving

- Disconnect electrical power.
- Turn off water supply, disconnect water and drain lines
- Tape racks in place; close door securely and tape it shut
- Wrap with blankets, and if using a hand truck, lift dishwasher from side in upright position only

"We Service What We Sell" is our assurance you can depend on Sears for service. . . and Sears service is nationwide. Your dishwasher has added value when you consider that Sears has service units nationwide, staffed with professional technicians specifically trained on Sears appliances and having parts, tools and equipment to insure that we meet our pledge to you . . . "We Service What We Sell."

**Sears Maintenance Agreement**
Maintain the value of your Kenmore dishwasher with a Sears Maintenance Agreement. Sears dishwashers are designed, manufactured, and tested for years of dependable operation. Yet, any modern appliance may require service from time to time.

The Sears Maintenance Agreement
- Is your way to buy tomorrow's service at today's price.
- Eliminates repair bills resulting from normal use.
- Allows for as many service calls as required.
- Provides for service by professional Sears-trained technicians
- Offers an annual preventive maintenance check-up at your request

This maintenance agreement does not cover original installation, reinstallation, or damage resulting from external causes such as acts of abuse, theft, fire, flood, wind, lightning, freezing, power failure, power reduction, etc.

**Sears Dishwasher Warranty**

**Full One-Year Warranty on Dishwasher**
For one year from the first day of use in your home, Sears will repair, free of charge, defects in material or workmanship which appear in this dishwasher.

**Full Ten-Year Warranty Against Leaks in the Tub and Inner Door Panel**
For ten years from the first day of use in your home, if a leak should occur as a result of failure of the tub or inner door panel due to cracking, chipping, or peeling, Sears will replace, free of charge, the tub or inner door panel.

If the dishwasher is subjected to other than private family use, the above warranty coverage is effective for only 90 days.

Warranty service is available by contacting the NEAREST SEARS SERVICE CENTER/DEPARTMENT in the United States. This warranty applies only while this product is in use in the United States.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

SEARS, ROEBUCK AND CO., Dept. 731CR-W Sears Tower, Chicago, IL 60684
