Caution:
Read and follow all Safety Rules and Operating Instructions before first use of this product.
WARRANTY STATEMENT

LIMITED TWO-YEAR WARRANTY ON CRAFTSMAN SNOW THROWER

For two years from the date of purchase, when this Craftsman Snow thrower is maintained, lubricated, and tuned up according to the operating and maintenance instructions in the owner's manual, Craftsman will repair, free of charge, any defect in material or workmanship.

If this Craftsman Snow thrower is used for commercial or rental purposes, this warranty applies for only 90 days from the date of purchase.

This warranty does not cover the following:

- Items which become worn during normal use, such as spark plugs, drive belts and shear pins.
- Repair necessary because of operator abuse or negligence, including bent crankshafts and the failure to maintain the equipment according to the instructions contained in the owner's manual.

WARRANTY SERVICE IS AVAILABLE BY RETURNING THE CRAFTSMAN SNOW THROWER TO THE NEAREST CRAFTSMAN SERVICE CENTER/DEPARTMENT IN THE UNITED STATES. THIS WARRANTY APPLIES ONLY WHILE THIS PRODUCT IS IN USE IN THE UNITED STATES.

This warranty gives you specific legal rights, and you may also have other rights which may vary from state to state.

Sears, Roebuck and Co., D817WA, Hoffman Estates, IL 60179

SAFETY RULES

LOOK FOR THIS SYMBOL TO POINT OUT IMPORTANT SAFETY PRECAUTIONS. IT MEANS ATTENTION!!! BECOME ALERT!!! YOUR SAFETY IS INVOLVED.

WARNING: Always disconnect the spark plug wire and place it where it cannot make contact with spark plug to prevent accidental starting during preparation, maintenance, or storage of your snow thrower.

IMPORTANT: Safety standards require operator presence controls to minimize the risk of injury. Your snow thrower is equipped with such controls. Do not attempt to defeat the function
of the operator presence control under any circumstances.

TRAINING
1. Read the operating and service instruction manual carefully. Be thoroughly familiar with the controls and the proper use of the equipment. Know how to stop the unit and disengage the controls quickly.
2. Never allow children to operate the equipment. Never allow adults to operate the equipment without proper instruction.
3. Keep the area of operation clear of all persons, particularly small children and pets.
4. Exercise caution to avoid slipping or falling especially when operating in reverse.

PREPARATION
1. Thoroughly inspect the area where the equipment is to be used and remove all doormats, sleet, boards, wires, and other foreign objects.
2. Disengage all clutches before starting the engine (motor).
3. Do not operate the equipment without wearing adequate outer garments. Wear footwear that will improve footing and remove all foreign objects.
4. Handle fuel with care; it is highly flammable.
   a. Use an approved fuel container.
   b. Never remove fuel tank cap or add fuel to a running engine (motor) or hot engine (motor).
   c. Fill fuel tank outdoors with extreme care. Never fill fuel tank indoors.
   d. Replace fuel cap securely and wipe up spilled fuel.
   e. Never store fuel or snow thrower with fuel in the tank inside of a building where fumes may reach an open flame or spark.
   f. Check fuel supply before each use, allowing space for expansion as the heat of the engine (motor) and/or sun can cause fuel to expand.
5. For all units with electric starting motors use electric starting extension cords certified CSA/UL. Use only with a receptacle that has been installed in accordance with local inspection authorities.
6. Adjust the snow thrower height to clear gravel or crushed rock surface.
7. Never attempt to make any adjustments while the engine (motor) is running (except when specifically recommended by manufacturer).
8. Let engine (motor) and snow thrower adjust to outdoor temperatures before starting to clear snow.
9. Always wear safety glasses or eye shields during operation or while performing an adjustment or repair to protect eyes from foreign objects that may be thrown from the snow thrower.

OPERATION
1. Do not operate this machine if you are taking drugs or other medication which can cause drowsiness or affect your ability to operate this machine.
2. Do not use this machine if you are mentally or physically unable to operate this machine safely.
3. Do not put hands or feet near or under rotating parts. Keep clear of the discharge opening at all times.
4. Exercise extreme caution when operating on or crossing gravel drives, walks or roads. Stay alert for hidden hazards or traffic.
5. After striking a foreign object, stop the engine (motor), remove the wire from the spark plug, thoroughly inspect snow thrower for any damage, and repair the damage before restarting and operating the snow thrower.
6. If the unit should start to vibrate abnormally, stop the engine (motor) and check immediately for the cause. Vibration is generally a warning of trouble.
7. Stop the engine (motor) whenever you leave the operating position, before unclipping the auger/impeller housing or discharge chute and when making any repairs, adjustments, or inspections.
8. When cleaning, repairing, or inspecting, make certain the auger/impeller and all moving parts have stopped and all controls are disengaged. Disconnect the spark plug wire and keep the wire away from the spark plug to prevent accidental starting.
9. Take all possible precautions when leaving the snow thrower unattended. Disengage the auger/impeller, stop engine (motor), and remove key.
10. Do not run the engine (motor) indoors, except when starting the engine (motor) and for transporting the snow thrower in or out of the building. Open the outside doors; exhaust fumes are dangerous (containing CARBON MONOXIDE, an ODORLESS and DEADLY GAS).
11. Do not clear snow across the face of slopes. Exercise extreme caution when changing direction on slopes. Do not attempt to clear steep slopes.

12. Never operate the snow thrower without proper guards, plates or other safety protective devices in place.

14. Do not overload the machine capacity by attempting to clear snow at too fast a rate.

15. Never operate the machine at high transport speeds on slippery surfaces. Look behind and use care when backing up.

16. Never direct discharge at bystanders or allow anyone in front of the unit.

17. Disengage power to the collector/impeller when snow thrower is transported or not in use.

18. Use only attachments and accessories approved by the manufacturer of the snow thrower (such as tire chains, electric start kits, etc.).

19. Never operate the snow thrower without good visibility or light. Always be sure of your footing and keep a firm hold on the handles. Walk; never run.

20. Do not over-reach. Keep proper footing and balance at all times.

21. Do not attempt to use snow thrower on a roof.

MAINTENANCE AND STORAGE

1. Check shear bolts and other bolts at frequent intervals for proper tightness to be sure the equipment is in safe working condition.

2. Never store the snow thrower with fuel in the tank inside a building where ignition sources are present such as hot water and space heaters, clothes dryers, and the like. Allow the engine (motor) to cool before storing in any enclosure.

3. Always refer to operator's guide instructions for important details if the snow thrower is to be stored for an extended period.

4. Maintain or replace safety and instruction labels, as necessary.

5. Run the snow thrower a few minutes after throwing snow to prevent freeze-up of the auger/impeller.

**WARNING:** This snow thrower is for use on sidewalks, driveways and other ground level surfaces. Caution should be exercised while using on steep sloping surfaces. DO NOT USE SNOW THROWER ON SURFACES ABOVE GROUND LEVEL such as roofs of residences, garages, porches or other such structures or buildings.

**IMPORTANT:** Many of the following symbols are located on your unit or on literature supplied with the product. Before you operate the unit, learn and understand the purpose for each symbol.

**Control And Operating Symbols**

- ![Slow](turtle) - ![Fast](rabbit)
- ![Electric Start](plug)
- ![Engine Start](arrow)

Safety Warning Symbols

**DANGER**
Thrown Objects. Keep Bystanders Away.

**DANGER**
Thrown Objects. Keep Bystanders Away.

**WARNING**
Stop The Engine Before Unclogging Discharge Chute!

**WARNING**
Hot Surface

**IMPORTANT**
Read Owner's Manual Before Operating This Machine.

**DANGER**
Avoid Injury From Rotating Auger. Keep Hands, Feet And Clothing Away.
**ASSEMBLY**

**Contents of Parts Bag (actual size)**
1 – Owner’s Manual (not shown)
1 – Packet of Fuel Stabilizer (not shown)
1 – Warranty Card (not shown)
2 – Parts bags (not shown)

*Non-Assembly Parts, found in toolbox located on belt cover*

- 1 Screw, 3/8-16 x 2 in
- 1 Nut, 3/8 In.
- 1 – Split Lockwasher
- 1 – Flatwasher 3/8 In.
- 2 – Spacer
- 2 – Shear Pins
- 2 – Shift Lever Knobs (not actual size)
- 2 – 3/8 Hex Jam Nuts
- 1 – Starter Cord (not actual size)

**Parts packed separately in carton (not shown full size)**

2 – Ignition Keys
(Attached to engine in plastic bag)
WARNING: Always wear safety glasses or eye shields while assembling snow thrower.

TOOLS REQUIRED FOR ASSEMBLY

1 - Knife to cut carton
1 - 1/2 inch wrenches
   (or adjustable wrenches)
1 - 9/16 inch wrenches
   (or adjustable wrenches)
1 - 3/4 inch wrenches
   (or adjustable wrenches)
1 - Pliers (to spread cotter pin)
1 - Screwdriver
1 - Measuring tape or ruler

Figure 1 shows the snow thrower in the shipping position.

TO REMOVE SNOW THROWER FROM CARTON

1. Locate all parts packed separately and remove from the carton.
   NOTE: Place fuel stabilizer in a safe place until needed for storage.
2. Remove top pallet from carton.
3. Cut and discard the plastic ties securing the chute rod to the upper pallet and place aside. Discard pallet.
4. Cut down all four corners of the carton and lay the panels flat.
5. Cut the bands holding the snow thrower to the lower pallet.
6. Remove snow thrower from lower pallet.
7. Remove the packing material from the handle assembly and all protective material from unit and discard.
8. Cut ties securing the clutch control cables to the lower handle.

Figure 2 shows the snow thrower completely assembled.
References to the right or left hand side of the snow thrower are from the viewpoint of the operator's position behind the unit.
TO ASSEMBLE THE HANDLE AND CRANK ASSEMBLY

1. Loosen, but do not remove, the screws, flatwashers, lockwashers, and hex nuts in the upper holes of the lower handle. See Figure 3.

Right Hand Side Of Upper Handle

Loosen, but do not remove
Hex Nut
3/8" Flatwasher
3/8" x 2" Screw

Figure 3

NOTE: Make sure the cables are not caught between the upper and lower handle.

2. Raise the upper handle into operating position. Upper handle should be to the outside of the lower handle.

NOTE: If the cables have become disconnected from the clutch levers, reinstall the cables as shown in Figure 4.

3. Install hardware supplied in the parts bag (screw, flatwasher, lockwasher, and hex nut) into bottom hole on right hand side of handles. DO NOT tighten until all bolts are in place.

4. Locate crank assembly removed earlier and remove the nylon locknut and flatwasher from the eye bolt assembly. See Figure 5.

Left Hand Side Of Upper Handle

Crank
Adaptor
3/8" Flatwasher
3/8" Nylon Locknut
3/8" Eye Bolt

Figure 5

5. Reinstall flatwasher and adaptor. Install eye bolt through lower hole on the left hand side of the handle.

6. Install the 3/8" flatwasher and the 3/8" nylon locknut loosely on the eye bolt.

7. Carefully remove cotter pin, clevis pin and universal joint pin from yoke end of crank rod assembly. See Figure 6.

8. Place universal joint into end of worm gear lining up large holes. Insert universal joint pin (ensure opening in pin is in line with small openings in universal joint).

9. Place yoke end of crank rod around universal joint, lining up openings. Insert clevis pin through assembly and secure with cotter pin. Spread ends of cotter pin to lock in place.

10. Tighten nut on eye bolt. Make sure eye bolt is properly aligned and the crank can freely rotate.

11. Tighten all handle bolts.
ASSEMBLE SNOW CHUTE

1. Remove back carriage bolt. See Figure 7.
2. Tilt chute back into operating position. See Figure 8.
3. Replace carriage bolt from inside of chute.
4. Replace flat washer and nylon locknut on outside of flange.
5. Tighten carriage bolt securely.

NOTE: Check all carriage bolts in flange for tightness. DO NOT overtighten.

CONNECT REMOTE CHUTE

1. Push remote chute control lever into "Chute Deflector Up" position.
2. Feed "Z" fitting through hole in remote chute bracket. See.
3. Snap remote chute control cable into remote chute bracket. See.
4. Connect "Z" fitting into remote chute control bracket. See.
5. Push remote chute control lever into "Chute Deflector Down" position.
6. Cut tie strap on chute deflector. See Figure.

SPEED SELECT LEVER

1. Cut plastic tie securing speed select lever assembly to the shifter bracket. See Figure 10.
2. Remove locknut, washer, spring, and the bolt. See Figure 12.
3. Position speed selector lever assembly as shown in Figure 11.

4. Reinstall bolt, spring, washer and locknut See Figure 12.

5. Tighten locknut until 1/8 to 3/16 inch of the bolt threads protrude past the locknut.

6. Thread the 3/8–16" hex jam nut onto the lever until the nut reaches the end of the thread. See Figure 12.

7. Thread the plastic knob as far as possible and ensure that the knob points forward.

8. Tighten the 3/8–16" hex jam nut against the knob securely.

9. Move shifter through all speeds to ensure proper tension of the spring. If shifter lever sticks in any of the notches, loosen locknut 1/2 turn at a time until shifter lever moves more freely.

10. If adjustment of speed of snow blower is needed, refer to "Friction Wheel Adjustment" in the ADJUSTMENT/REPAIR section.
3. Tighten the 3/8-16" hex jam nut against the knob securely.

REMOTE CHUTE CONTROL KNOB
1. Thread the 3/8-16" hex jam nut onto the lever until the nut reaches the end of the thread. See Figure 13.
2. Thread the plastic knob as far as possible and ensure that the knob points forward.

HOW TO SET THE SKID HEIGHT
Your snow thrower is equipped with height adjust skids on the outside of the auger housing. To adjust the skid height for different conditions, see To Adjust Skid Height paragraph in the Service And Adjustment section.

✓ CHECKLIST
Before you operate your new snow thrower, to ensure that you receive the best performance and satisfaction from this quality product, please review the following checklist:
✓ All assembly instructions have been completed.
✓ The discharge chute rotates freely.
✓ No remaining loose parts in carton.

While learning how to use your snow thrower, pay extra attention to the following important items:
✓ Engine oil is at proper level.
✓ Make sure gas tank is filled properly with clean, fresh, unleaded gasoline.
✓ Become familiar with all controls—their location and function. Operate controls before starting engine.

HEADLIGHT
The headlight on your snow thrower is positioned down for packaging purposes. Rotate upward for operating position.
Auger Drive Lever – Starts and stops the auger and impeller (snow gathering and throwing)
Traction Drive Lever – Propels the snow thrower forward and in reverse.
Speed Shifter Lever – Selects the speed of the snow thrower (6 speeds forward and 2 speeds reverse).
Crank Assembly – Changes the direction of snow throwing through the discharge chute.
Chute Deflector – Changes the distance the snow is thrown.
Discharge Chute – Changes the height and direction the snow is thrown.
Height Adjust Skid – Adjusts the ground clearance of the auger housing.
Ignition Key – Must be inserted to start the engine.
Recoil Starter Handle – Starts the engine manually.

Choke Control – Used to start a cold engine.
Primer Button – Injects fuel directly into the carburetor manifold for fast starts in cold weather.
Remote Chute Control Lever – Push forward to discharge snow high and far. Pull remote lever back to discharge snow down.
Throttle Control – Controls the engine speed.
Electric Start Button – (If so equipped) Used to start the engine using the 120 V electric starter.
Shear Pin – Shear pins are designed to break (to protect the machine) if an object becomes lodged in the auger housing.
Toolbox – Spare shear pins and spacers are located in toolbox.
The operation of any snow thrower can result in foreign objects being thrown into the eyes, which can result in severe eye damage. Always wear safety glasses or eye shields while operating the snow thrower.

We recommend standard safety glasses or a wide vision safety mask for over your glasses.

**WARNING:** Read Owner's Manual before operating machine. Never direct discharge toward bystanders stop the engine before unclogging discharge chute or auger housing and before leaving the machine.

**TO STOP YOUR SNOW THROWER**
1. To stop throwing snow, release the auger drive lever. See Figure 14.
2. To stop the wheels, release the traction drive lever.
3. To stop the engine, push the throttle control lever to off and pull out the ignition key.

**TO CONTROL SNOW DISCHARGE**
1. Turn the chute control rod to set the direction of the snow throwing.
2. Loosen the wing knob on the chute deflector and move the deflector to set the distance. Move the deflector (Up) for more distance, (Down) for less distance. Then tighten the wing knob (See Figure 15).

**HOW TO MOVE FORWARD AND BACKWARD**
1. To shift, release the traction drive lever (left hand) and move the speed shifter lever to the speed you desire. Ground speed is determined by snow conditions. Select the speed you desire by moving the speed shifter lever left into the appropriate notches on the shift lever plate:
   - Speeds 1,2 – Wet, Heavy
   - Speed 3 – Light
   - Speed 4 – Very Light
   - Speed 5,6 – Transport only

2. Engage the traction drive lever (left hand). As the snow thrower starts to move, maintain a firm hold on the handles, and guide the snow thrower along the clearing path. Do not attempt to push the snow thrower.

3. To move the snow thrower backward, move the speed shifter lever right into first or second reverse and engage the traction drive lever (left hand).

**IMPORTANT:** Do not move the speed shifter lever while the traction lever is down.

**TO THROW SNOW**
1. Push down the auger driver lever (right hand).
2. Release to stop throwing snow.

**TO USE WHEEL LOCKOUT PIN**
1. The left hand wheel is secured to the axle with a klick pin. This unit was shipped with this klick pin in the locked position (through wheel hole). See Figure 16.

2. For ease of maneuverability in light snow conditions, disconnect the klick pin from the wheel locked position and push into the single wheel drive position (unlocked axle hole only). See Figure 17.
NOTE: Make sure that the klick pin is in the single wheel drive position of the axle only and not through the locked position.

BEFORE STARTING THE ENGINE
1. Before you service or start the engine, familiarize yourself with the snow thrower. Be sure you understand the function and location of all controls.
2. Check the tension of clutch cable before starting the engine. See To Adjust The Control Cable paragraph in the Service & Adjustments section of this manual.
3. Be sure that all fasteners are tight.
4. Make sure the height adjust skids are properly adjusted. See To Adjust Skid Height paragraph in the Service & Adjustments section of this manual.
5. Check tire pressure (14-17 pounds). Do not exceed maximum amount of pressure.

CHECK THE OIL:
NOTE: The engine was shipped from the factory filled with oil. Check the level of the oil. Add oil as needed.
1. Make sure the unit is level.
   NOTE: Do not check the level of the oil while the engine runs.
2. Remove the oil fill cap/dipstick. Check the oil.
3. If necessary, add oil until the oil reaches the FULL mark on the oil fill cap/dipstick (see Figure 18). Do not add too much oil.
4. Tighten the fill cap/dipstick securely each time you check the oil level.

NOTE: For extreme cold operating conditions of 0°F and below, use a partial synthetic 0W30 motor oil for easier starting.

NOTE: S.A.E. 5W30 motor oil may be used to make starting easier in areas where temperature is consistently 20°F or lower.

FILL GAS:
NOTICE: ENGINES WHICH ARE CERTIFIED TO COMPLY WITH CALIFORNIA AND US EPA EMISSION REGULATIONS FOR ULGE ENGINES: Are certified to operate on regular unleaded gasoline. Include the following emission control system(s): EM, TWC (if so equipped). Include any user adjustable features—therefore no other adjustments are needed.

WARNING: Experience indicates that alcohol blended fuels (called gasohol or those using ethanol or methanol) can attract moisture which leads to separation and formation of acids during storage. Acidic gas can damage the fuel system of an engine while in storage.

NOTE: To avoid engine problems, the fuel system must be emptied before storage for 30 days or longer. Start the engine and let it run until the fuel lines and carburetor are empty. Use the carburetor bowl drain to empty residual gasoline from the float chamber. Use fresh fuel next season. See the Storage section in this manual for additional information.
Never use engine or carburetor cleaner products in the fuel tank or permanent damage may occur.

1. Fill the fuel tank only with a fresh, clean, unleaded regular, unleaded premium, or reformulated automotive gasoline. DO NOT use leaded gasoline. Make sure that the container you pour the gasoline from is clean and free from rust or other foreign particles. Never use gasoline that may be stale from long periods of storage in the container.

WARNING: Gasoline is flammable. Always use caution when handling or storing gasoline.
Do not fill fuel tank while snow thrower is running, when it is hot, or when snow thrower is in an enclosed area.
Keep away from open flame or an electrical spark and do not smoke while filling the fuel tank.
Never fill the tank completely. Fill the tank to within 1/4"-1/2" from the top to provide space for expansion of fuel.
Always fill fuel tank outdoors and use a funnel or spout to prevent spilling.
Make sure to wipe up any spilled fuel before starting the engine.
Store gasoline in a clean, approved container and keep the cap in place on the container.

TO STOP ENGINE
To stop engine, move the throttle control lever to "STOP" position and remove key. Keep the key in a safe place. The engine will not start without the key.

TO START ENGINE
(electric starter, if equipped)
Be sure that the engine has sufficient oil. The snow thrower engine is equipped with a 120 volt A.C. electric starter and recoil starter. Before starting the engine, be certain that you have read the following information.

WARNING: The starter is equipped with a three-wire power cord and plug and is designed to operate on 120 volt AC household current. It must be properly grounded at all times to avoid the possibility of electrical shock which may be injurious to operator. Follow all instructions carefully as set forth in the "To Start Engine" section. Determine that your house wiring is a three-wire grounded system. Ask a licensed electrician if you are not sure. If your house wire system is not a three-wire system, do not use this electric starter under any conditions. If your system is grounded and a three-hole receptacle is not available at the point your starter will normally be used, one should be installed by a licensed electrician. When connecting 120 volt AC "Power Cord", always connect the cord to the Switch Box on the engine first, then plug the other end into the three-hole grounded receptacle.
When disconnecting "Power cord", always unplug the end in the three-hole grounded receptacle first.

COLD START
1. Be sure auger drive and traction drive levers are in the disengaged (RELEASED) position.
2. Move throttle control to "FAST" position.
3. Remove the keys from the plastic bag. Insert one key into ignition slot. Make sure it snaps into place. Do not turn key. Keep the second key in a safe place.
4. Rotate choke knob clockwise to the choke ON position.
5. Connect the power cord to the switch box on the engine.
6. Plug other end of power cord into a three-hole, grounded 120 VOLT, AC receptacle. (See WARNING in this section).
7. Push the primer button while covering the vent hole as follows: Remove finger from primer button between primes.
   Do not prime if temperature above 50°F (10°C).
   Push two times if temperature is 50°F (10°C) to 15°F (-10°C).
   Push four times if temperature is below 15°F (-10°C).

8. Push down on the starter button until the engine starts. Do not crank for more than 10 seconds at a time.
   This electric starter is thermally protected. If overheated it will stop automatically and can be restarted only when it has cooled to a safe temperature (a wait of about 5 to 10 minutes is required).

9. When the engine starts, release the starter button and move choke lever to "1/2 choke" position. When engine runs smoothly, move choke lever to "No Choke" position.

10. Disconnect power cord from receptacle, first, and then from switch box.

   NOTE: Allow the engine to warm up for several minutes before blowing snow in temperatures below 0°F.

11. Run engine at full throttle "FAST" when throwing snow.

**WARM START**

If restarting a warm engine after a short shutdown, leave choke at "OFF" and do not push the primer button. If the engine fails to start, follow the Cold Start instructions.

**TO START ENGINE**

(recoil starter)

Be sure that the engine has sufficient oil. The snow thrower engine is equipped with a recoil starter. Before starting the engine, be certain that you have read the following information.

**COLD START**

1. Be sure auger drive and traction drive levers are in the disengaged (RELEASED) position.
2. Move throttle control to "FAST" position.
3. Remove the keys from the plastic bag. Insert one key into ignition slot. Make sure it snaps into place. Do not turn key. Keep the second key in a safe place.
4. Rotate choke knob clockwise to the choke ON position.
5. Push the primer button while covering the vent hole as follows: Remove finger from primer button between primes.
   Do not prime if temperature above 50°F (10°C).
   Push two times if temperature is 50°F (10°C) to 15°F (-10°C).
   Push four times if temperature is below 15°F (-10°C).
6. Pull the starter handle rapidly. Do not allow the handle to snap back, but allow it to rewind slowly while keeping a firm hold on the starter handle.
7. As the engine warms up, move choke lever to "1/2 choke" position. When engine runs smoothly, move choke lever to "No Choke" position.

   NOTE: Allow the engine to warm up for several minutes before blowing snow in temperatures below 0°F.

8. Run engine at full throttle "FAST" when throwing snow.

**WARM START**

If restarting a warm engine after a short shutdown, leave choke at "OFF" and do not push the primer button. If the engine fails to start, follow the Cold Start instructions.

**FROZEN STARTER**

If the starter is frozen and will not turn engine:
1. Pull as much rope out of the starter as possible.
2. Release the starter handle and let it snap back against the starter.
If the engine still fails to start, repeat the two previous steps until the engine starts. Then continue with the directions for cold start.
To help prevent possible freeze-up of recoil starter and engine controls, proceed as follows after each snow removal job.
1. With the engine running, pull the starter rope hard with a continuous full arm stroke three or four times. Pulling of starter rope will produce a loud clattering sound. This is not harmful to the engine or starter.
2. With the engine not running, wipe all snow and moisture from the carburetor cover in area of control levers. Also move throttle control, choke control, and starter handle several times.

WARNING: Never run engine indoors or in enclosed, poorly ventilated areas. Engine exhaust contains CARBON MONOXIDE, AN ODORLESS AND DEADLY GAS. Keep hands, feet, hair and loose clothing away from any moving parts on engine and snow thrower. The temperature of muffler and nearby areas may exceed 150°F. Avoid these areas.
DO NOT allow children or young teenagers to operate or be near snow thrower while it is operating.

WARNING: Do not attempt to remove any item that may become lodged in auger without taking the following precautions:
• Release auger drive lever.
• Move throttle lever to stop position.
• Remove (do not turn) ignition key.

• Disconnect spark plug wire.
• Do not place your hands in the auger or discharge chute. Use a pry bar.

SNOW THROWING TIPS
1. For maximum snow thrower efficiency in removing snow, adjust ground speed, NEVER the throttle. Go slower in deep, freezing or wet snow. If the wheels slips, reduce forward speed. The engine is designed to deliver maximum performance at full throttle and should be run at this power setting at all times.
2. Most efficient snow throwing is accomplished when the snow is removed immediately after it falls.
3. For complete snow removal, slightly overlap each path previously taken.
4. The snow should be discharged down wind whenever possible.
5. For normal usage, set the skids so that the scraper bar is 1/8" above the skids. For extremely hard-packed snow surfaces, adjust the skids upward so that the scraper bar touches the ground.
6. On gravel or crushed rock surfaces, set the skids at 1-1/4" below the scraper bar. See To Adjust Skid Height paragraph in the Service & Adjustments section of this manual. Rocks and gravel must not be picked up and thrown by the machine.
7. After the snow throwing job has been completed, allow the engine to idle for a few minutes, which will melt snow and accumulated ice off the engine.
8. Clean the snow thrower thoroughly after each use.
9. Remove ice and snow accumulation and all debris from the entire snow thrower, and flush with water (if possible) to remove all salt or other chemicals. Wipe snow thrower dry.

GENERAL RECOMMENDATIONS
The warranty on this snow thrower does not cover items that have been subjected to operator abuse or negligence. To receive full value from the warranty, the operator must maintain the snow thrower as instructed in this manual.

Some adjustments will need to be made periodically to properly maintain your snow thrower.
All adjustments in the Service and Adjustments section of this manual should be checked at least once each season.

AFTER EACH USE
- Check for any loose or damaged parts.
- Tighten any loose fasteners.
- Check and maintain the auger.
- Check controls to make sure they are functioning properly.

- If any parts are worn or damaged, replace immediately.

LUBRICATION CHART

Lubricate Disc Drive Plate Zerk With a Hi Temp EP Moly Grease.

SNOW THROWER

AS REQUIRED

The following adjustment should be performed more than once each season.

1. Auger drive belt should be adjusted after the first 2 to 4 hours of use, again about mid-season and twice each season thereafter (See to Adjust Belts paragraph in the Service and Adjustment section).

LUBRICATION—EVERY 25 HOURS

Lubricate Disc Drive Plate every twenty-five (25) hours and at the end of the season and/or before storage.

To Lubricate

1. Position speed selector lever in first gear.
2. Stand the snow thrower up on the auger housing end.
3. Remove the bottom panel.
4. Turn disc drive plate clockwise by hand until grease zerk is clearly visible at front center. See Figure 20.
5. Place a coin or a shim of equal thickness between the rubber friction wheel and disc drive plate to prevent rubber friction wheel contacting the drive disc plate.
6. To grease zerk, use a hand grease gun, lubricate with a Hi Temp EP Moly grease. Fill zerk only until grease becomes visible below bearing assembly located under grease zerk. DO NOT over fill.

CAUTION: DO NOT allow grease to come in contact with the disc drive plate or friction wheel or damage will result.

IMPORTANT: Remove coin and ensure that a gap exists between friction wheel and disc drive plate.

NOTE: Clean all excess grease found on friction disc hub.

LUBRICATION—NOT REQUIRED

1. Hex Shaft and Sprockets - Hex shaft and sprockets require no lubrication. All bearings and bushings are lifetime lubricated and require no maintenance. See Figure 20.

NOTE: Any greasing or oiling of the above components can cause contamination of the friction wheel. If the disc

drive plate or friction wheel come in contact with grease or oil, damage to the friction wheel will result.
Should grease or oil come in contact with the disc drive plate or friction wheel, be sure to clean the plate and wheel thoroughly.
NOTE: For storage, the hex shaft and sprockets should be wiped with 5W30 motor oil to prevent rusting.

2. Auger Gear Box - The auger gear box is lubricated at the factory and should not require additional lubrication. If for some reason the lubricant should leak out, have auger gear case checked by a competent repairman.

ENGINE

LUBRICATION
Check the crankcase oil level before starting the engine and after each five (5) hours of continuous use. See Figure 21. Add S.A.E. 5W30 motor oil as needed. Tighten fill cap/dipstick securely each time you check the oil level.

TO CHANGE ENGINE OIL

1. Position the snow thrower so that the oil drain plug is at the lowest point on the engine.
2. Remove the oil drain plug and the oil fill cap/dipstick. Drain the oil into a suitable container.
NOTE: The oil will drain more freely when the engine is warm.
3. After draining all the oil, reinstall the oil drain plug securely.
4. Fill the engine crankcase with S.A.E. 5W30 motor oil, pouring slowly. DO NOT OVERFILL.

SPARK PLUG
Check the spark plug every twenty-five (25) hours. Replace the spark plug if the electrodes are pitted or burned or if the porcelain is cracked.

1. Make sure the spark plug is clean. Clean the spark plug by carefully scraping the electrodes (do not sand blast or use a wire brush).
2. Check the spark plug gap with a feeler gauge and reset gap to 0.30" if necessary. See Figure 22.
3. Before installing the spark plug, coat the threads lightly with oil for easy removal. Tighten the spark plug to a torque of 15 foot-pounds.

Figure 21

Change the oil every twenty-five (25) hours or at least once a year if the snow thrower is not used for twenty-five (25) hours.

Figure 22
SERVICE AND ADJUSTMENT

WARNING: Always disconnect the spark plug wire and place it where it cannot make contact with spark plug to prevent accidental starting when making any adjustments or repairs.

TO ADJUST SKID HEIGHT

This snow thrower is equipped with two height adjustment skids, located on the outside of the auger housing. See Figure 23.

These skids elevate the front of the snow thrower.

1. Position the snow thrower on a level surface.
2. Make sure both tires are equally inflated. Proper tire pressure is 14 to 17 PSI. See side of tire for maximum inflation. Do not exceed sidewall maximum pressure on tire.
3. Place the extra shear bolts supplied (found in parts bag) under each end of the scraper bar next to the adjustable skids.
4. Loosen the mounting nuts that hold the adjustable skids. To bring the front of the snow thrower down, raise the adjustable skids. Tighten the mounting nuts. See Figure 23.

NOTE: For rocky or uneven surfaces, raise the front of the snow thrower by moving the skids down.

WARNING: Be certain to maintain proper ground clearance for your particular area to be cleared. Objects such as gravel, rocks or other debris, if struck by the impeller, may be thrown with sufficient force to cause personal injury, property damage or damage to the snow thrower.

TO ADJUST SCRAPER BAR

After considerable use, the metal scraper bar will have a definite wear pattern. The scraper bar in conjunction with the skids should always be adjusted to allow 1/8" between the scraper bar and the sidewalk or area to be cleaned.

1. Position the snow thrower on a level surface.
2. Make sure both tires are equally inflated. Proper tire pressure is 14 to 17 PSI. See side of tire for maximum inflation. Do not exceed sidewall maximum pressure on tire.
3. Loosen the carriage bolts and nuts securing the scraper bar to the auger housing.
4. Adjust the scraper bar to the proper position.
5. Tighten the carriage bolts and nuts, making sure that the scraper bar is parallel with the working surface.
6. For extended operation, the scraper bar may be reversed. If the scraper bar must be replaced due to wear, remove the carriage bolts and nuts and install a new scraper bar.
HOW TO CHECK AND ADJUST THE CABLES

The cables are adjusted at the factory and no adjustment should be necessary. If the cables have become stretched or are sagging adjustment will be necessary.

To check for correct adjustment, disconnect the Z-fitting at the drive lever, move the drive lever to the full forward position, just contacting the plastic bumper. The control cables are correctly adjusted when the center of the "Z" fitting is between the center and top of the hole in the drive lever and there is no droop in the cable. See Figure 24.

1. Remove gas from gas tank. Stand snow thrower on end.

2. Disconnect the "Z" fitting from drive lever.

3. Pull spring cover up to expose spring. Push the cable through the spring to expose the threaded portion of the cable. See Figure 25.

4. Hold the square end of the threaded portion with pliers and adjust the locknut in or out until the excess slack is removed.

5. Pull the cable back through the spring and connect the cable. Do the same for the other drive lever cable, if needed.

NOTE: Whenever the traction drive or auger belts are adjusted or replaced, the cables will need to be adjusted.

TO ADJUST BELTS

Belts stretch during normal use. If you need to adjust the belts due to wear or stretch, proceed as follows:

How To Adjust The Auger Drive Belt

If your snow thrower will not discharge snow, check the control cable adjustment. If it is correct, then check the condition of the auger drive belt. It may be loose or damaged. If it is damaged, replace it. See To Replace Belts paragraph in this section. If the auger drive belt is loose, adjust as follows:

1. Disconnect the spark plug wire.

2. Remove the belt cover. See Figure 26.
3. Loosen the nut on the **Idler pulley** and move the pulley toward the belt about 1/8". See Figure 27.

4. Tighten the nut.

5. Press the auger drive lever. Check the tension on the belt (opposite auger idler pulley). The belt should deflect about 1/2" with moderate pressure (See Figure 28).

**NOTE:** If the adjustment is not correct, repeat the adjustment.

6. Replace the belt cover.

7. Check the clutch control cable adjustment.

8. Reconnect the spark plug wire.

**Traction Drive Belt**

The traction drive belt has constant spring pressure and does not require adjustment. Replace the traction drive belt if it is slipping. See To Replace Belts paragraph in this section.

**TO REPLACE BELTS**

The drive belts on this snow thrower are of special construction and should be replaced with original equipment belts available from your nearest Craftsman Store. A distributor’s list is supplied in the parts manual.

You will need the assistance of a second person while replacing the belts.

**How To Remove The Auger Drive Belt**

If the auger drive belt is damaged, the snow thrower will not discharge snow. Replace the damaged belt as follows.

1. Remove the gas from the gas tank. Stand the snow thrower up on the front end of the auger housing.

   **WARNING:** Drain the gasoline outdoors, away from fire or flame.

2. Disconnect the spark plug wire.

3. Remove the screw from the belt cover. Remove the belt cover. See Figure 26.

4. Remove the bolts on each side of the motor mount frame. See Figure 29.

5. Loosen the bolts on each side of the motor mount frame. The auger housing and the motor mount frame will separate, hinged by the bolts.

6. Loosen the belt guide. Pull the belt guide away from the auger drive pulley. See Figure 27.

7. Loosen the nut on the idler pulley. Pull the idler pulley away from the auger drive belt.

F-001068-J
8. Remove the old auger drive belt. Replace the auger drive belt with an original factory replacement belt available from an authorized service center.

9. Install the new auger drive belt onto the auger drive pulley and onto the drive pulley.

10. Adjust the auger drive belt. See "How To Adjust The Auger Drive Belt" in the Service And Adjustment section.

11. Adjust the belt guide. See "How To Adjust The Belt Guide" in the Service And Adjustment section.

12. Install the bolts on each side of the motor mount frame. See Figure 29.

13. Tighten the bolts on each side of the motor mount frame.

14. Install the belt cover. Tighten the screw. See Figure 26.

15. Check the adjustment of the cables. See "How To Check And Adjust The Cables" in the Service And Adjustment section.

16. Connect the spark plug wire.

**How To Remove the Traction Drive Belt**

If the snow thrower will not move forward, check the traction drive belt for wear or damage. If the traction drive belt is worn or damaged, replace the belt as follows.

1. Remove the gas from the gas tank. Stand the snow thrower up on the front end of the auger housing.

   **WARNING:** Drain the gasoline outdoors, away from fire or flame.

2. Disconnect the spark plug wire.

3. Remove the auger drive belt. See "How To Remove The Auger Drive Belt" in the Maintenance section.

4. Pull the traction drive idler pulley away from the traction drive belt. See Figure 30.

5. Remove the old traction drive belt from the traction drive pulley and from the engine pulley. Replace the traction drive belt with an original factory replacement belt available from an authorized service center.

6. Install the new traction drive belt onto the traction drive pulley and onto the engine pulley.

7. Make sure the traction drive idler pulley is properly aligned with the traction drive belt.

8. Install and adjust the auger drive belt. See "How To Remove The Auger Drive Belt" in the Service And Adjustment section.

9. Adjust the belt guide. See "How To Adjust The Belt Guide" in the Service And Adjustment section.

10. Install the bolts on each side of the motor mount frame. See Figure 29.

11. Tighten the bolts on each side of the motor mount frame.

12. Install the belt cover. Tighten screw. See Figure 26.

13. Check the adjustment of the cables. See "How To Check And Adjust The Cables" in the Service And Adjustment section.

14. Connect the spark plug wire.
SERVICE AND ADJUSTMENT

HOW TO ADJUST THE BELT GUIDE

1. Disconnect spark plug wire.
2. Remove the screw. Remove the belt cover. See Figure 26.
3. Engage the auger drive lever.
4. Measure the distance between the belt guide and auger drive belt. The correct distance is 1/8 inch (3.175 mm). See Figure 31.

   Belt Guide
   Auger Idler
   Pulley Engaged

5. If an adjustment is necessary, loosen the mounting bolt for the belt guide. Move the belt guide to the correct position. Tighten the mounting bolt for the belt guide.
6. Install the belt cover. Tighten the screw. See Figure 26.
7. Connect the spark plug wire.

HOW TO ADJUST OR REPLACE THE FRICTION WHEEL

How To Check The Friction Wheel
If the snow thrower will not move forward, check the traction drive belt, the traction drive cable or the friction wheel. If the friction wheel is worn or damaged, it must be replaced. See “How To Replace The Friction Wheel” in this section. If the friction wheel is not worn or damaged, check as follows.
1. Remove the gas from the gas tank. Stand the snow thrower up on the front end of the auger housing.

WARNING: Drain the gasoline outdoors, away from fire or flame.

2. Disconnect the spark plug wire.
3. Remove the bolts on each side of the bottom panel. See Figure 32.
4. Loosen the bolts on each side of the bottom panel.
5. Remove the bottom panel.
6. Position the shift speed lever in the first forward gear.
7. Note the position of the friction wheel on the disc drive plate (See Figure 33). In the correct position, the right outer side of the disc drive plate must be three inches (7.62 cm) from the center of the friction wheel. If the friction wheel is not in the correct position, adjust as follows.

   Disc Drive Plate
   Friction Wheel

   Figure 33
SERVICE AND ADJUSTMENT

How To Adjust The Friction Wheel

1. Remove washer and cotter pin connecting trunnion nut to speed rod. See Figure 34.

   Speed Control Rod
   Trunnion
   Speed Rod
   Washer
   Cotter Pin

   Figure 34

2. Twist trunnion nut up or down on shift rod to obtain the correct friction wheel position.

3. Put end of trunnion nut through hole in speed control rod and reattach washer and cotter pin.

4. Tighten the bolts on each side of the bottom panel.

5. Install the bolts on each side of the bottom panel.

How To Replace The Friction Wheel

If the friction wheel is worn or damaged, the snow thrower will not move forward. The friction wheel must be replaced as follows.

1. Remove the gas from the gas tank. Stand the snow thrower up on the front end of the auger housing.

   WARNING: Drain the gasoline outdoors, away from fire or flame.

2. Disconnect the spark plug wire.

3. Remove the top bolts on each side of the bottom panel. See Figure 32.

4. Loosen the bottom bolts on each side of the bottom panel.

5. Remove the bottom panel.

6. Remove the three fasteners that hold the friction wheel to the hub. See Figure 35.

   Friction Wheel
   Hub
   Bolt
   Hex Nut
   Shaft

   Figure 35

7. Remove the four bolts that hold the bearing plates on each side of the hex shaft. See Figure 36.

   NOTE: Take special note of the position of the washers and retaining ring on the hex shaft and the sprocket assembly.

8. Remove the bearing plate from the right side. Do not remove the hex shaft. Leave the hex shaft in position. Carefully raise hex shaft just enough to allow the friction wheel to be removed.

9. Remove the friction wheel from the hub. Slip the friction wheel toward the right off the hex shaft. See Figure 35.

10. Assemble the new friction wheel onto hub with the fasteners removed earlier.

11. Install the bearing plate onto the right side. Make sure the hex shaft...
SERVICE AND ADJUSTMENT

is engaged with both bearing plates and that the washers and retaining ring are installed in the original position. See Figure 36.

12. Fasten the bearing plates using the four bolts removed earlier.

13. Make sure the hex shaft turns freely.

14. Check the adjustment of the friction wheel. See "How To Adjust The Friction Wheel" in this section.

15. Make sure the friction wheel and the disc drive plate are free from grease or oil.

16. Install the bottom panel. See Figure 32.

17. Tighten the bottom bolts on each side of the bottom panel.

18. Install the top bolts on each side of the bottom panel.

19. Connect the spark plug wire.

HOW TO REPLACE THE AUGER SHEAR BOLT

The augers are secured to the auger shaft with special shear bolts. These shear bolts are designed to break and protect the machine if an object becomes lodged in the auger housing. Do not use a harder bolt as the protection provided by the shear bolt will be lost.

WARNING: For safety and to protect the machine, use only original equipment shear bolts.

To replace a broken shear bolt, proceed as follows. Extra shear bolts were provided in the assembly parts bag.

1. Move the throttle control to the stop position. Disengage all controls.

2. Disconnect the spark plug wire. Make sure all moving parts have stopped.

3. Align the hole in the auger with the hole in the auger shaft. Install the new shear pin and spacer. See Figure 37.

4. Connect the spark plug wire.

TO ADJUST THE CARBURETOR

If you think your carburetor needs adjusting, see your nearest Craftsman Store. Engine performance should not be affected at altitudes up to 7,000 feet. For operation at higher elevations, contact your nearest Craftsman Store.

IMPORTANT: Never tamper with the engine governor, which is factory set for proper engine speed. Over-speeding the engine above the factory high speed setting can be dangerous. If you think the engine-governed high speed needs adjusting, contact your nearest Craftsman Store, which has the proper equipment and experience to make any necessary adjustments.

TO ADJUST OR REPLACE THE SPARK PLUG

NOTE: This spark ignition system meets all requirements of the Canadian Interference-Causing Equipment Regulations.

NOTE: This engine complies with all current Australian and New Zealand limitations regarding electromagnetic interference.

If you have difficulty starting the snow thrower, adjust or replace the spark plug. Replace the spark plug if the electrodes are pitted or burned or if the porcelain is cracked. Follow the instructions below.
SERVICE AND ADJUSTMENT

To adjust:
1. Clean spark plug by carefully scraping the electrodes (Do not sand blast or use a wire brush).
2. Be sure spark plug is clean and free of foreign material. Check electrodes gap with a wire feeler gauge and reset gap to 0.030" if necessary. See Figure 38.

To Replace:
1. If you need a new spark plug, use only the proper replacement spark plug.
2. Set the gap to 0.030 inches.
3. Before installing the spark plug, lightly coat the spark plug threads with oil or grease to insure easy removal.
4. Firmly tighten the spark plug in the engine.
5. If a torque wrench is available, torque the plug to 18 to 23 foot pounds.

Figure 38
WARNING: Never store your snow thrower indoors or in an enclosed, poorly ventilated area. If gasoline remains in the tank, fumes may reach an open flame, spark or pilot light from a furnace, water heater, clothes dryer, cigarette, etc.

NOTE: To prevent engine damage (if snow thrower is not used for more than 30 days) follow the steps below.

SNOW THROWER
1. Thoroughly clean the snow thrower.
2. Lubricate all lubrication points. See the Maintenance section.
3. Be sure that all nuts, bolts and screws are securely fastened. Inspect all visible moving parts for damage, breakage and wear. Replace if necessary.
4. Touch up all rusted or chipped paint surfaces; sand lightly before painting.
5. Cover the bare metal parts of the blower housing auger and the impeller with rust preventative, such as a spray lubricant.

NOTE: A yearly checkup or tune-up by a Sears service center is a good way of ensuring that your snow thrower will provide maximum performance for the next season.

ENGINE

WARNING: Drain the gasoline outdoors, away from fire or flame.

Gasoline must be removed or treated to prevent gum deposits from forming in the fuel tank, filter, hose, and carburetor during storage. Also, during storage alcohol blended gasoline that uses ethanol or methanol (sometimes called gasohol) attracts water. It acts on the gasoline to form acids which damage the engine.

1. To remove gasoline, run the engine until the fuel tank is empty and the engine stops.
2. If you do not remove the gasoline, use fuel stabilizer supplied with unit or purchase Craftsman Fuel Stabilizer No. 3550. Add fuel stabilizer to any gasoline left in the tank to minimize gum deposits and acids. If the fuel tank is almost empty, mix stabilizer with fresh gasoline in a separate container and add some to the fuel tank.
3. Always follow the instruction on the stabilizer container. After the stabilizer is added to the fuel tank, run the engine at least ten minutes to allow the mixture to reach the carburetor.
4. Change the engine oil.
5. Lubricate the piston/cylinder area. First, remove the spark plug and squirt a few drops of clean engine oil into the spark plug hole. Next, cover the spark plug hole with a rag to absorb oil spray. Then, pull two or three times on the recoil starter rope to rotate the engine. Finally, install the spark plug and attach the spark plug wire.

OTHER
1. If possible, store your snow thrower indoors and cover it to give protection from dust and dirt.
2. If the machine must be stored outdoors, block up the snow thrower to be sure the entire machine is off the ground.
3. Cover the snow thrower with a suitable protective cover that does not retain moisture. Do not use plastic.

IMPORTANT: Never cover snow thrower while engine and exhaust areas are still warm.
