Technics

How to use the remote control transmitter

AV control stereo receiver

SA-GX350

Battery installation

Insert the batteries included

When you need to replace these batteries Use two UM-4 "AAA", IEC R03 (1.5 V) or equivalent batteries.

When you remove the batteries

Use of batteries

Do not mix old and new batteries, or batteries of different types (carbon and alkaline, etc.).

Always remove old, weak or worn-out batteries promptly and dispose of them properly.

The battery life is about one year.

Although the battery life varies depending on how often the device is used, the batteries should be replaced about once every year on the average.

The batteries should be replaced if commands from the remote control transmitter do not operate the unit even when transmitter is held close to the front panel.

Never subject batteries to excessive heat or flame; do not attempt to disassemble them; and be sure they are not short-circuited.

If the remote control is not to be used for a long period of time, remove the batteries and store them in a cool, dark place.

If a battery leaks, remove all batteries and dispose of them properly. Thoroughly clean the battery compartment before inserting new batteries.

If the electrolyte comes into contact with skin or clothes, flush with water immediately.

Keep batteries out of reach of children.

Do not use rechargeable (nickel-cadmium) type batteries.

Do not attempt to recharge alkaline or carbon batteries.

Method for use

Use the remote control within 60 degrees and within 7 meters (23 ft.) facing directly toward the receiver's remote control signal receptor.

Operation notes

Aim the remote control's transmission window toward the unit's sensor. Avoid any obstacles.

Be sure the transmission window and the unit's sensor are free from dust. Excessive dust might affect performance.

The operation may not be correct if direct sunlight or another strong light source strikes the receiving sensor of this unit. If there is a problem, place the unit away from the light source.

When operating a TV, VCR or a CD changer (or CD player) with a remote control sensor, face this remote control toward the remote control sensor of the unit to be operated.

Remote control opera

This remote control transmitter can be used to operate units manufactured by this company other than this receiver unit, including CD changers (or CD players), tape decks and also TVs and VCRs manufactured since 1985.

Preparations before use

Check the appropriate connection of the power cords and connection cables for the remote control in order to operate CD changers (or CD players) and tape decks correctly. (See page 8 of the operating instructions for the main unit.)

If the connections are made as shown on page 8 and the power supply switches of each unit are set to ON, the power supply for each unit will simultaneously turn ON and OFF when the power supply of the receiver is turned ON and OFF.

Note

When operating the CD changer (or CD player), TV or VCR, the remote control signal may fail to operate the unit, even if it is manufactured by this company, because of the nature of the remote control signal. In such cases, switch over the remote control signal by the following method.

Depending on the model, there may be cases where operation is still not possible even if the remote control signal is switched over due to differences in frequency range characteristics.

For CD changer (or CD player) operation

Press POWER and CD simultaneously, hold for 2 seconds.

For TV operation

ĊD

Press POWER and TV simultaneously, hold for 2 seconds.

For VCR operation

Press POWER and VCR simultaneously, hold for 2 seconds.

To restore the previous memory contents, carry out the same operations one more time.

Troubleshooting guide

Problem	Probable cause(s)	Suggested remedy
Remote control transmitter does not function.	Batteries are incorrectly installed.	 Insert the batteries so that the positive (+) and negative (-) polarities are correct.
	The remote control transmitter batteries are drained.	Replace them with new batteries.
	There is an obstruction between the remote control transmitter and the receiver, TV or VCR.	Remove the obstruction.
	The remote control transmitter is not correctly facing the receiver, TV or VCR.	• Face the remote control transmitter correctly toward the signal receptor of each unit.
